Latest UiPath UiPath-ADPv1 Exam Questions in Three Formats

Our passing rate of UiPath-ADPv1 exam guide is 98%-100% and our UiPath-ADPv1 test prep can guarantee that you can pass the exam easily and successfully. Our UiPath-ADPv1 exam materials are highly efficient and useful and can help you pass the exam in a short time and save your time and energy. It is worthy for you to buy our UiPath-ADPv1 Quiz torrent and you can trust our product. You needn't worry about anything as long as you have our UiPath-ADPv1 training material. We guarantee to you our UiPath-ADPv1 exam materials can help you and you will have an extremely high possibility to pass the exam.

UiPath (ADPv1) Automation Developer Professional Sample Questions (Q159-Q164):

NEW QUESTION # 159
What is the purpose of the Invoke Code activity in UiPath?

- A. Invokes VB MET or Java code optionally passing it a list of input arguments
- B. Invokes VB.NET or C# code, optionally passing il a list of input arguments.
- C. Invokes Java code, optionally passing it a list of input arguments.
- D. Invokes VB MET code optionally passing it a list of input arguments

Answer: B

Explanation:
The purpose of the Invoke Code activity in UiPath is to invoke VB.NET or C# code, optionally passing it a list of input arguments. The Invoke Code activity allows the developer to write and execute custom code in VB.NET or C# within a UiPath workflow. The Invoke Code activity has a Code property, where the developer can enter the code to be executed. The Invoke Code activity also has an Arguments property, where the developer can specify the input and output arguments for the code. The Invoke Code activity can be useful for performing complex calculations, manipulating data, or integrating with external libraries or applications that are not supported by the existing UiPath activities. References: [Invoke Code]

NEW QUESTION # 160
To retrieve all Outlook emails with the word "UiPath" in the subject, which filtering property and filter schema should a developer use?

- A. Property: FilterByMessageIds
  Schema: "@SQL="'urn:schemas:httpmail:subject'" like 'UiPath%'"
- B. Property: FilterByMessageIds
  Schema: "@SQL="'urn:schemas:httpmail:subject'" like '%UiPath%'"
- C. Property: Filter
  Schema: "@SQL="'urn:schemas:httpmail:subject'" like 'UiPath%'"
- D. Property: Filter
  Schema: "@SQL="'urn:schemas:httpmail:subject'" like '%UiPath%'"

Answer: D

Explanation:
o retrieve all Outlook emails with the word "UiPath" in the subject, the developer should use the Filter property and the filter schema "@SQL="'urn:schemas:httpmail:subject'" like '%UiPath%'".
The Filter property allows the developer to specify a condition for retrieving the emails based on the email properties.
The filter schema is a string that follows the SQL syntax and uses the urn:schemas:httpmail namespace to access the email properties.
The subject property is accessed by using "urn:schemas:httpmail:subject". The like operator is used to match the value of the subject property with a pattern that contains the word "UiPath".
The percent sign (%) is a wildcard that matches any sequence of characters. Therefore, the filter schema "@SQL="'urn:schemas:httpmail:subject'" like '%UiPath%'" will match any email that has the word "UiPath" anywhere in the subject. References: Get Outlook Mail Messages

NEW QUESTION # 161
At indication time, the Strict Selector has the following functionalities available:

- A. Accuracy, Open in UiExplorer, Copy to clipboard. Show all matches.
- B. Open in UiExplorer, Copy to clipboard, Show all matches.
- C. Refresh, Open in UiExplorer, Copy to clipboard.
- D. Ignore text. Copy to clipboard. Show all matches.

Answer: B

Explanation:
The Strict Selector is a targeting method that uses the selector information of a UI element to identify it on the screen. It is one of the four targeting methods available in UiPath Studio, along with Fuzzy Selector, Image, and Computer Vision1. The Strict Selector is considered to be the most reliable and stable targeting method, as it uses the attributes and properties of the UI element that are unlikely to change2.
At indication time, the Strict Selector has the following functionalities available:
* Open in UiExplorer: This option opens the UiPath Explorer window, where you can inspect and edit the selector information of the indicated UI element, as well as use advanced features such as anchors, wildcards, variables, and regex3.
* Copy to clipboard: This option copies the selector information of the indicated UI element to the clipboard, so you can paste it elsewhere, such as in a text editor or another activity.
* Show all matches: This option highlights all the UI elements on the screen that match the selector information of the indicated UI element. This helps you to check if there are any duplicates that might cause the automation to fail at runtime. You can also use the Ignore text option to exclude the text attribute from the selector information, which might reduce the number of matches4.

The other options are incorrect because:

* Option A is incorrect because it does not include the Show all matches option, which is available for the Strict Selector.
* Option B is incorrect because it does not include the Open in UiExplorer option, which is available for the Strict Selector.
* Option D is incorrect because it includes the Accuracy option, which is not available for the Strict Selector. The Accuracy option is only available for the Image targeting method, which allows you to adjust the similarity threshold between the indicated image and the target image5.

NEW QUESTION # 162

A developer has created a variable of type List of Strings named "Users_List", and initialized it with an empty list: "Users_List = new List(Of String)".
What is printed in the log message after the following Invoke Code is executed?

- A. Object reference not set to an instance exception is thrown
- B. System Argument Exception is thrown
- C. 0
- D. 1

Answer: D

Explanation:
The screenshot shows an "Invoke Code" activity in UiPath with the following VB.NET code:
Users_List.Add("User1")
Users_List.Add("User2")
According to the given information, the "Users_List" variable is a List of Strings that has been initialized with an empty list before the Invoke Code activity is run. The code within the Invoke Code activity is adding two strings: "User1" and "User2" to the "Users_List".
The Log Message activity following the Invoke Code is attempting to log the count of items in "Users_List", which would be the number of elements contained in the list at that time.
Given the steps that have been described, after the Invoke Code activity has run, the "Users_List" will contain two elements ("User1" and "User2"). Therefore, the log message will print the count of items in the list, which is:
B: 2
So the correct answer is B, as the "Users_List" will have two elements and Users_List.Count will return the number 2.
The Invoke Code activity is used to execute VB.NET or C# code within a UiPath workflow1. The activity has the following properties:
Code: The code that is to be executed. This field supports only strings and String variables1.
Language: The language that the code is written in. The available options are VBNet and CSharp1.
Arguments: The parameters that can be passed to and from the code1.
In this question, the developer has created a variable of type List of Strings named "Users_List", and initialized it with an empty list:
"Users_List = new List(Of String)". Then, the developer has used the Invoke Code activity to execute the following code:
Users_List.Add("User1") Users_List.Add("User2")
This code adds two items ("User1" and "User2") to the "Users_List" variable. After the Invoke Code activity, the developer has used the Log Message activity to print the count of items in the "Users_List" variable, using the expression
"Users_List.Count.ToString". This expression returns the number of items in the list as a string2. Therefore, the log message will print
"2", as there are two items in the list

NEW QUESTION # 163

Data from an Excel file is read into a data table named "dtEmployee", as displayed in the following graphic:
A developer needs to filter the data table to obtain all rows representing employees from the Finance and IT departments with a Salary under 30,000. Which expression yields the desired outcomes?

- A. dtEmployee.Select("([Department]='IT' AND [Department]='Finance') AND [Salary] < 30000")
- B. dtEmployee.Select("[Department]='IT OR [Department]='Finance' OR [Salary] < 30000")

- C. dtEmployee.Select("[Department]='IT' OR [Department]= 'Finance' AND [Salary] < 30000")
- D. dtEmployee.Select("([Department]='IT' OR [Department]='Finance') AND [Salary] < 30000")

Answer: D

NEW QUESTION # 164
