

HPE7-A03시험패스 가능한 인증덤프자료 최신인기시험 기출문제

참고: DumpTOP에서 Google Drive로 공유하는 무료 2026 HP HPE7-A03 시험 문제집이 있습니다:
https://drive.google.com/open?id=11eY2z_yeeChHmI920UeF-vKpTtzAu6F8

우리 DumpTOP에서는 최고이자 최신의 HP 인증HPE7-A03덤프자료를 제공 함으로 여러분을 도와 HP 인증HPE7-A03 인증자격증을 쉽게 취득할 수 있게 해드립니다. 만약 아직도 HP 인증HPE7-A03시험패스를 위하여 고군분투하고 있다면 바로 우리 DumpTOP를 선택함으로 여러분의 고민을 날려버릴수 있습니다.

HP HPE7-A03 시험요강:

주제	소개
주제 1	<ul style="list-style-type: none">Propose the Solution: The focal point of this topic is creating the design documentation and the final design. Moreover, the topic also focuses on presenting the solution.
주제 2	<ul style="list-style-type: none">Architect the Solution: It measures your knowledge about identifying the solution options, designing high-level topologies, selecting the correct products, and determining the suitable overlay and underlay design. Additionally, the topic discusses how to verify that the design meets the original requirements.
주제 3	<ul style="list-style-type: none">Analyze Requirements: It focuses on determining possible high-level solutions. The topic also discusses mapping the needs into technical solutions and evaluating the proposed solution against project objectives and dependencies. Moreover, it also focuses on documenting assumptions.
주제 4	<ul style="list-style-type: none">Discover Requirements: This topic defines the goals and identifies the current environment and the objectives. Lastly, it also focuses on collecting information.

시험대비 HPE7-A03시험패스 가능한 인증덤프자료 덤프 최신자료

저희가 알아본 데 의하면 많은 인사들이 HP 인증HPE7-A03 시험을 위하여 많은 시간을 투자하고 있다고 합니다. 하지만 특별한 학습 반 혹은 인터넷강이 같은 건 선택하지 않으셨습니다. 때문에 패스는 아주 어렵습니다. 보통은 한번에 패스하시는 분들이 적습니다. 우리 DumpTOP에서는 아주 믿을만한 학습가이드를 제공합니다. 우리 DumpTOP에는 HP 인증HPE7-A03 테스트버전과 HP 인증HPE7-A03 문제와 답 두 가지 버전이 있습니다. 우리는 여러분의 HP 인증HPE7-A03 시험을 위한 최고의 문제와 답 제공은 물론 여러분이 원하는 모든 인증시험자료들을 선사할 수 있습니다.

최신 Aruba Certified Professional HPE7-A03 무료샘플문제 (Q56-Q61):

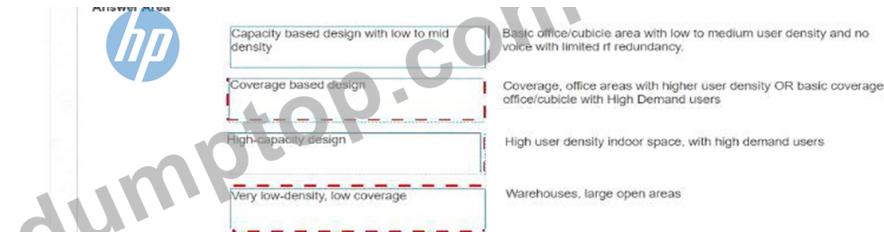

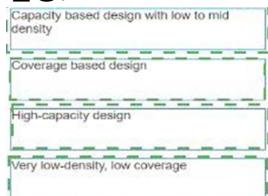

질문 # 56

Match the deployment type with the usage scenario.

Answer Area	Capacity based design with low to mid density	Coverage based design	High-capacity design	Very low-density, low coverage
	Basic office/cubicle area with low to medium user density and no voice with limited rf redundancy	Coverage, office areas with higher user density OR basic coverage office/cubicle with High Demand users	High user density indoor space, with high demand users	Warehouses, large open areas

정답:

설명:

Explanation:

Capacity based design with low to mid density - Basic office/cubicle area with low to medium user density and no voice with limited rf redundancy. Coverage based design - Coverage, office areas with higher user density OR basic coverage office/cubicle with High Demand users. High-capacity design - High user density indoor space, with high demand users. Very low-density, low coverage - Warehouses, large open areas. The types of wireless network deployment should be matched to the usage scenarios based on the density of users and coverage requirements:

- * Capacity based design with low to mid density is suitable for basic office or cubicle areas where there are not many users, and high-performance voice applications are not a priority, thus limited RF redundancy may be acceptable.
- * Coverage based design is intended for areas where coverage is more critical than capacity. It could be used in office areas with higher user density, where maintaining a basic level of connectivity is more important than accommodating a large number of high-bandwidth connections.
- * High-capacity design is used in environments where there is a high density of users who are likely to be using bandwidth-intensive applications. This could include indoor spaces like conference centers, auditoriums, or any area with a high concentration of users and devices.
- * Very low-density, low coverage is typically for spaces like warehouses or large open areas where there are few users spread out over a large area. The focus here is on providing coverage to all areas,
- * regardless of the low user density.

질문 # 57

The customer recently found out that Aruba OS-CX switches are capable of Application Recognition. What requirements should be fulfilled in order to do this? (Select two.)

- A. 8360 with Aruba CX Advanced License
- B. 6400 with Aruba CX Advanced License
- C. 6200F/M with Aruba CX Advanced License
- D. 6300F/M with Aruba CX Advanced License

정답: B

설명:

Aruba OS-CX switches, specifically the Aruba 6400 and 6300F/M models, are designed to support advanced networking features, including Application Recognition, with the Aruba CX Advanced License. The Advanced License enables enhanced capabilities such as deeper visibility into application flows, advanced routing features, and improved network analytics. Application Recognition allows these switches to identify and classify applications running on the network, enabling more intelligent and dynamic network policies and improving overall network performance and security. The requirement for an Aruba CX Advanced License on these specific models ensures that the necessary software features and support are available to leverage Application Recognition capabilities effectively.

질문 # 58

Identify the stakeholders when gathering information for the network design and new IDF/MDF design. (Select two.)

- A. Chief Financial Officer
- B. Help desk manager
- C. Network Operations manager
- D. Facility manager

정답: B,C

설명:

When designing a network and considering new Intermediate Distribution Frame/Main Distribution Frame (IDF/MDF) deployments, it's essential to gather information from various stakeholders to ensure the design meets all operational and organizational requirements. According to Aruba Campus Access learning resources, the Help Desk Manager and Network Operations Manager are crucial stakeholders in this process. The Help Desk Manager provides insights into common issues, user complaints, and service requests, which can influence network design decisions to improve user experience and operational efficiency. The Network Operations Manager, on the other hand, offers a technical perspective on network management, maintenance requirements, and operational challenges. Engaging with these stakeholders ensures that the network design is aligned with both user needs and technical operational standards, contributing to a more resilient, efficient, and user-friendly network infrastructure.

질문 # 59

A large multinational financial institution has contracted you to design a new full-stack wired and wireless network for their new 6-story regional office building. The bottom two floors of this facility will be retail space for a large banking branch. The upper floors will be carpeted office space for corporate users, each floor being approximately 100,000 sq ft (9290 sqm). Data centers are all off site and will be out of scope for this project. The customer is underserved by its existing L2-based network infrastructure and would like to take advantage of modern best practices in the new design. The network should be fully resilient and fault-tolerant, with dynamic segmentation at the edge.

The retail space will include public guest Wi-Fi access. Retail associates will have corporate tablets for customer service, and there will be a mix of wired and wireless devices throughout the retail floors. The corporate users will primarily use wireless for connectivity, but several wired clients, printers, and hard VoIP phones will be in use.

The customer is also planning on renovating the corporate office space in order to take advantage of "smart office" technology. These improvements will drive blue-dot wayfinding, presence analytics, and other location-based services. The client decided that they would like to manage two wiring closets as a single stack with a total of 10 switches and a minimum transport speed of 25Gbps over OM4 MM fiber. They would also like to keep the stacking cabling cost to a minimum.

Which switch series would most economically accomplish these requirements?

- A. Aruba 6100 Switch Series
- **B. Aruba 6300F Switch Series**
- C. Aruba 6200F Switch Series
- D. Aruba 6400 Switch Series

정답: B

설명:

The Aruba 6300F Switch Series is designed to meet the needs of modern, full-stack wired and wireless networks with a focus on cost-effectiveness, performance, and scalability. This series supports high-speed connectivity options, including 25Gbps over OM4 MM fiber, making it suitable for the client's requirement to manage two wiring closets as a single stack with a total of 10 switches. The 6300F series also offers the flexibility of modular uplinks and stacking capabilities, ensuring that the client's needs for minimum transport speed and economic efficiency are met. Additionally, the Aruba 6300F series is known for its energy efficiency and lower operational costs, further contributing to its economic value.

질문 # 60

You are responding to the customer's RFP and are at the point of documenting design decisions that were not specified in the RFP or the RFP questions. What are valid examples of assumptions made that should be presented to the customer during the response? (Select three >

- A. Optional monitoring systems (syslog, flow collectors) exist.
- **B. The customer budget is sufficient to afford the proposed solution.**
- **C. Adequate virtual machine resources exist to successfully install required or optional management systems.**
- D. The customer has technical staff that is capable of implementing the proposed equipment.
- E. Vendor equipment availability will meet customer project timelines.
- **F. Sufficient space and power exist to rack and turn up the proposed equipment.**

정답: B,C,F

질문 # 61
