It is also beneficial for businesses that want to hire skilled professionals to design and implement their B2C Commerce Cloud solutions.

To become a Salesforce Certified B2C Commerce Architect, candidates must pass the Salesforce B2C-Commerce-Architect Certification Exam. B2C-Commerce-Architect exam consists of 60 multiple-choice questions, which must be completed in 105 minutes. B2C-Commerce-Architect exam is administered by a proctor and can be taken online or in person at a testing center. To register for the exam, candidates must have a Salesforce Certified B2C Commerce Developer certification.

### Salesforce Certified B2C Commerce Architect Sample Questions (Q33-Q38):

#### NEW QUESTION # 33

A developer has a sandbox with code to log a message during execution, and the following code:

After the code executes, the developer does not see any log file with the message in the WebDAV folder. Which two tasks does the developer need to perform to correct this issue?

Choose 2 answers

- A. Set the logging global preference to true.
- **B. Check the box for Info under Log Files.**
- **C. Request that the developer's account be given permission to the Log Center of the current realm.**
- D. Set the root log level to debug.

**Answer: B,C**

#### NEW QUESTION # 34

a B2C Commerce developer has Implemented a job that connects to an SFTP, loops through a specific number of .csv files. and Generates a generic mapping for every file. In order to keep track of the mappings imported, if a generic mapping is created successfully, a custom object instance is created with the .

csv file name. After running the job in the Development instance, the developer checks the Custom Objects in Business Manager and notices there isn't a Custom Object for each csv file that was on SFTP.

What are two possible reasons that some generic mappings were not created? Choose 2 answers

- A. The generic mappings definition need to be replicated from Staging before running the job.
- **B. Invalid format in one or more of the .csv files.**
- C. The job needs to run on Staging and then replicate the generic mappings and custom objects on Development
- **D. The maximum number of generic mappings was reached.**

**Answer: B,D**

Explanation:

Two plausible reasons for some generic mappings not being created despite the SFTP job running are: A) the system reached its limit for the maximum number of generic mappings allowed, and C) there was an invalid format in one or more of the .csv files processed. When the maximum threshold for mappings is reached, the system cannot create additional mappings, thus stopping any further imports from being registered as custom objects. Additionally, if .csv files are incorrectly formatted, the job would fail to create mappings for those files, leading to the absence of corresponding custom objects in Business Manager. It's crucial to ensure

that file formats adhere to expected specifications and that system limits are adequately managed to avoid such issues.

### NEW QUESTION # 35

Given a website launched to production, the Architect can rely on several SFCC Business Manager tools that provide an automatic notification feature.

Which three tools have such a feature and do not require to be monitored manually?

Choose 3 answers

- A. Pipeline Profiler
- B. Job Schedules
- C. Quota Status
- D. Analytics Conversion Reports
- E. Custom Log Settings

**Answer: A,B,C**

Explanation:

The Salesforce B2C Commerce Business Manager tools that feature automatic notifications are:

Option A (Job Schedules): Business Manager can send notifications based on job schedules, alerting users when a scheduled job has completed, failed, or met specific conditions. This feature helps in monitoring automated processes without manual oversight.

Option D (Pipeline Profiler): This tool provides automatic notifications regarding the performance of different pipelines, allowing architects and developers to monitor site performance and troubleshoot issues proactively.

Option E (Quota Status): Automatically notifies administrators when certain quotas are reached or exceeded, such as API call limits or data storage limits, which is crucial for maintaining site stability and performance.

These tools are essential for proactive site management, ensuring that administrators can address potential issues before they affect the site's operation.

### NEW QUESTION # 36

An existing B2C Commerce site has the following aliases configuration:

□ Which statement related to this configuration is incorrect?

- A. Hostname www.example.de will redirect to www.example.com/de.
- B. Hostname www.example.com will redirect to www.example.com/us
- C. Hostname www.example.co.uk will redirect to www.example.com/uk.
- D. Site supports multiple hostnames and locales.

**Answer: B**

Explanation:

In the provided configuration, the incorrect statement is B. While it appears that the hostname www.example.com should redirect to www.example.com/us based on the "if-site-path": "us" entry, this assumes that the default path or redirect isn't overridden by other configurations within the hostname alias file not visible in the snapshot provided. Typically, in Salesforce B2C Commerce, such a direct statement about redirection should align with explicit mapping rules that include hostname and path directives, which are not detailed for www.example.com to www.example.com/us in the snippet provided. This absence suggests that the statement may be incorrect unless corroborated by additional detailed mappings in the full configuration file.

### NEW QUESTION # 37

There is an issue with the site when the domain is opened from Google search results. After researching the problem, it turns out that the site returns a 404 page error when accessed with a parameter in the URL.

What should the Architect recommend to fix that issue?

- A. Add dynamic redirect if the URL contains parameter to Home Show.  
Add this snippet to the aliases configuration for the domain
- B. Add this snippet to the aliases configuration for the domain  
□
- C. Add dynamic catch-all rule to redirect to home page.
- D. Add this snippet to the aliases configuration for the domain:

Answer: D
