ISC CC Valid Dumps to pass the Certified in Cybersecurity (CC) (CC) certification exam on your first try.

ISC Certified in Cybersecurity (CC) Sample Questions (Q264-Q269):

NEW QUESTION # 264

Which of these is an example of a physical access control mechanism?

- A. Network switches that filter according to MAC addresses
- **B. A lock on a door**
- C. Software-based firewall at the perimeter of the network
- D. A process that requires two people to act at the same time to perform a function

Answer: B

NEW QUESTION # 265

A company network has been infected with malware and all its servers are down. What is the first step that the Disaster Recovery team should take to restore the systems?

- A. Contact the enforcement to investigate the cyberattack
- B. Conduct a risk assessment of determine the extent of the damage
- C. Restore data from backup systems
- **D. Disconnect the affected systems from the network**

Answer: D

NEW QUESTION # 266

Which can be considered a fingerprint of a file or message?

- A. Encoding
- B. Decryption
- C. Encryption
- **D. Hashing**

Answer: D

Explanation:

A cryptographic hash uniquely represents the contents of a file or message. Even a small change produces a completely different hash value, making it an effective digital fingerprint.

NEW QUESTION # 267

Which of the following documents contains elements that are NOT mandatory?

- A. Policies
- **B. Guidelines**
- C. Regulations
- D. Procedures

Answer: B

Explanation:

Guidelines are non-mandatory recommendations that provide best practices and flexibility. Policies, procedures, and regulations are mandatory and enforceable.

Guidelines allow organizations to adapt security practices based on context without strict enforcement, as defined in ISO/IEC 27001 and governance frameworks.

NEW QUESTION # 268

Which of the following vulnerabilities cannot be discovered during a routine vulnerability assessment?

- **A. Zero-day vulnerability**
- B. File and directory permissions
- C. Kernel flaw
- D. Buffer overflow

Answer: A

Explanation:

A zero-day vulnerability cannot be detected during a routine vulnerability assessment because it is unknown to vendors and security tools at the time of discovery. Vulnerability scanners rely on known signatures and disclosures.

Kernel flaws, buffer overflows, and permission misconfigurations are commonly identified through scans, audits, and configuration reviews.

Zero-day vulnerabilities require behavioral analysis, threat intelligence, or exploitation before detection. This is why defense-in-depth and monitoring are essential complements to vulnerability scanning.

Security frameworks emphasize that vulnerability assessments alone cannot detect unknown threats.

NEW QUESTION # 269

.....

All people dream to become social elite. However, less people can take the initiative. If you spend less time on playing computer games and spend more time on improving yourself, you are bound to escape from poverty. Maybe our CC real dump could give you some help.
