There are 2 correct answers to this question.

Response:

- A. InfoProvider
- B. Dataset
- C. Cube
- D. Model

答案: B,D

問題 #27

In the SAP Analytics Cloud Catalog, what access do you have to the files?

Please choose the correct answer.

Response:

- A. Read/Write
- B. Edit
- C. View

答案: C

問題 #28

What is a Data Product in the context of SAP Business Data Cloud?

Please choose the correct answer.

Response:

- A. A cloud-based data storage for large datasets.
- B. A machine learning algorithm for generating insights.
- C. A software application that extracts and transforms data.
- D. A data set with predefined and stable structure and interfaces.

答案: D

問題 #29

What features are supported by the SAP Analytics Cloud data analyzer? Note: There are 3 correct answers to this question.

- A. Linked dimensions
- **B. Input controls**
- **C. Conditional formatting**
- D. Charts
- **E. Calculated measures**

答案: B,C,E

解題說明:

The SAP Analytics Cloud Data Analyzer is designed for ad-hoc data exploration and analysis, providing a focused environment for users to quickly derive insights. Among its key supported features are calculated measures, which allow users to create new metrics on the fly based on existing data, enabling deeper analysis without modifying the underlying model. Input controls are also supported, providing interactive filtering capabilities that allow users to dynamically adjust the data displayed based on specific criteria, enhancing the flexibility of their analysis. Furthermore, conditional formatting is a valuable feature that enables users to apply visual styling (e.g., colors, icons) to data points based on defined rules, making it easier to identify trends, outliers, or specific conditions at a glance. While charts and linked dimensions are integral to full stories, the Data Analyzer's strength lies in its immediate, flexible analytical capabilities for a single data source.

問題 #30

What is the main storage type of the object store in SAP Business Data Cloud?

- A. SAP HANA extended tables
- **B. SAP HANA data lake files**
- C. SAP BW/4HANA InfoObjects
- D. SAP BW/4HANA DataStore objects (advanced)

答案: B

解題說明:

The primary storage type for the object store within the SAP Business Data Cloud (BDC) architecture is SAP HANA data lake files. SAP BDC is designed to handle vast amounts of diverse data, including semi-structured and unstructured data, which is efficiently stored in a data lake. The SAP HANA data lake, specifically its file storage component, provides a highly scalable and cost-effective solution for retaining raw, historical, and detailed data. This contrasts with traditional relational databases (like SAP HANA extended tables) or data warehousing constructs (like BW/4HANA DataStore objects or InfoObjects), which are optimized for structured, aggregated data and specific query patterns. The object store's reliance on data lake files in BDC underscores its capability to manage enterprise-wide data regardless of its structure, making it suitable for a wide range of analytical workloads, including those involving machine learning and advanced analytics where raw data access is crucial.
