NCP-EUC Guaranteed Questions Answers, NCP-EUC Exam Outline

Our NCP-EUC guide torrent boosts 98-100% passing rate and high hit rate. Our Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam test torrent use the certificated experts and our questions and answers are chosen elaborately and based on the real exam according to the past years' exam papers and the popular trend in the industry. The language of our NCP-EUC study torrent is easy to be understood and the content has simplified the important information. Our product boosts the function to simulate the exam, the timing function and the self-learning and the self-assessment functions to make the learners master the NCP-EUC Guide Torrent easily and in a convenient way. Based on the plenty advantages of our product, you have little possibility to fail in the exam.

Nutanix Certified Professional - End User Computing (NCP-EUC) 6.10 Exam Sample Questions (Q42-Q47):

NEW QUESTION # 42

An administrator has been tasked with deploying different applications to different user groups in the environment, while minimizing storage impact. Some applications are web-based, while some require traditional installations. Which method would best meet the goals?

- A. Share a common desktop image containing all applications.
- B. Deploy necessary applications via GPO when users login.
- C. Implement Nutanix Flow and an ID-based VDI Security Group.
- **D. Use Citrix App Layering and deploy an ELM virtual appliance.**¹

Answer: D

Explanation:

Comprehensive and Detailed Explanation From Exact Extract of Nutanix End User Computing documents:

According to Citrix App Layering on Nutanix reference architectures:

* **Minimizing Storage:** Citrix App Layering allows an administrator to capture applications in separate virtual disks ("App Layers") that are stored once and then dynamically merged with a base OS layer to create layered images.² This avoids the storage bloat of installing every application into a single "Gold Image" or creating dozens of unique images for every department.

* **ELM Role:** The Enterprise Layer Manager (ELM) is the virtual appliance required to manage this layering environment.³ It orchestrates the creation of layers and the publishing of images.

* **Targeting User Groups:** By using Elastic Layering (a feature of App Layering), specific app layers can be delivered to users based on their Active Directory group membership at login, fulfilling the requirement to deploy "different applications to different user groups" without installing them permanently in the base image.

NEW QUESTION # 43

An administrator needs to deploy virtual desktops to a Hyper-V Nutanix cluster with writable differencing disks, The administrator will use read only master image with clones that link back to the image.

Which native feature will the cluster use to complete this task?

- **A. Shadow Clones**
- B. VM Flash Mode
- C. Opllog
- D. Compression

Answer: A

Explanation:

The feature in Nutanix that would be used to complete the task of deploying virtual desktops to a Hyper-V Nutanix cluster with writable differencing disks using a read-only master image with clones that link back to the image is Shadow Clones. Shadow Clones allow for the creation of a snapshot or a clone of a VM that uses the original VM's disks as read-only, and only writes changes to a separate differencing disk. This is useful when deploying virtual desktops as it can reduce storage requirements and improve performance.

Nutanix shadow clones are a feature that enables distributed caching of virtual disks (vDisks) that are in a multi-reader scenario. This can improve performance and reduce network traffic for scenarios such as VDI or private clone boot storms¹

NEW QUESTION # 44

Which feature can be utilized to ensure that a container always has enough space to accommodate a specific- sized workload?

- A. Thick Provisioning
- B. Linked Clones
- C. A Storage Pool
- **D. Capacity Reservation**

Answer: D

Explanation:

In Nutanix storage architecture, Capacity Reservation (also known as "Reserved Capacity") is the feature designed to guarantee space at the container level.

Nutanix documentation states: "To ensure that there is space available for a storage container, you can enable capacity reservation. Capacity reservation ensures that a storage container has a minimum allocated capacity, preventing other storage containers from using that reserved space." This effectively isolates the required storage amount from the shared Storage Pool, ensuring the specific workload housed in that container always has the physical capacity it requires, regardless of the consumption by other containers in the pool.

NEW QUESTION # 45

The operations team have been tasked with increasing overall datacenter efficiency with a target minimum of 80% CPU, memory, and storage capacity utilization. They are requesting usage data from all application owners be sent on a monthly basis to be ingested into their capacity management software.

An administrator has an implementation of four Nutanix clusters under the management of a single Prism Central Instance.

How should the administrator best provide the data needed to the operations team to ensure adherence to the datacenter utilization directive?

- A. Create a Metric Chart in Prism Central with CPU, Memory, and Storage usage across all clusters and export the data to be sent to the operations team,
- **B. Schedule a monthly email report with CPU, Memory, and Storage Usage data across all clusters under the Reporting facility in Prism Central.**
- C. Export the CPU Memory and Storage Usage metrics under Virtual Infrastructure/VMs in Prism Central and FTP the file to the operations team's FTP server.
- D. Review the VM Efficiencies widget in Prism Central and export the data to a comma delimited file to be sent to the operations team.

Answer: B

Explanation:

This option allows you to create a custom report with the required metrics for all VMs across all clusters and send it automatically to the operations team via email. This way, you don't have to manually export or FTP the data every month.

An administrator has deployed Citrix Virtual Apps and Desktops on a Nutanix dedicated VDI cluster.

What is the delivery method in use, based on the curator reports shown in the exhibit?

- A. Full Clones
- **B. Citrix MCS**
- C. Linked Clones
- D. Citrix Provisioning

Answer: B

Explanation:

the delivery method in use is Citrix MCS. Citrix Machine Creation Services (MCS) is a technology that creates and manages virtual machines from a master image. MCS uses Nutanix storage efficiency features such as deduplication and shadow clones to reduce storage consumption and improve performance. The exhibit shows that the VDI cluster has a high deduplication ratio (7.5x) and a low physical space usage (1.2 TB) compared to the logical space usage (9.1 TB), which indicates that MCS is in use.
