

2026 HQT-4160 Reliable Braindumps Book: Hitachi Vantara Qualified Professional - VSP 5000 Series Installation - High-quality Hitachi Exam HQT-4160 Reviews

P.S. Free 2026 Hitachi HQT-4160 dumps are available on Google Drive shared by Actual4Labs: <https://drive.google.com/open?id=162VhHKArUqZ1gVHyRTQtA-YcINtSVDDM>

To pass the Hitachi HQT-4160 exam on the first try, candidates need Hitachi Vantara Qualified Professional - VSP 5000 Series Installation updated practice material. Preparing with real HQT-4160 exam questions is one of the finest strategies for cracking the exam in one go. Students who study with HQT-4160 Real Questions are more prepared for the exam, increasing their chances of succeeding. The HQT-4160 exam preparation calls for a strong preparation and precise Hitachi HQT-4160 practice material.

Hitachi HQT-4160 Certification Exam is a comprehensive test that covers all aspects of installing and configuring the Hitachi VSP 5000 Series. HQT-4160 exam is designed to test the knowledge and skills of IT professionals in areas such as hardware installation, software configuration, and troubleshooting. HQT-4160 exam also covers topics such as data protection, disaster recovery, and performance tuning.

Hitachi Vantara Qualified Professional - VSP 5000 Series Installation exam is a valuable certification for IT professionals who want to demonstrate their expertise in installing and maintaining Hitachi Vantara's VSP 5000 storage systems. Hitachi Vantara Qualified Professional - VSP 5000 Series Installation certification validates the skills and knowledge of professionals in the installation and configuration of storage hardware, ensuring that they are qualified to work on complex storage systems.

Exam HQT-4160 Reviews - HQT-4160 Questions

All these three Actual4Labs HQT-4160 exam questions formats contain valid, updated, and real Hitachi Vantara Qualified Professional - VSP 5000 Series Installation exam questions. The Hitachi HQT-4160 exam questions offered by the Actual4Labs will assist you in HQT-4160 Exam Preparation and boost your confidence to pass the final Hitachi HQT-4160 exam easily.

Hitachi HQT-4160: Hitachi Vantara Qualified Professional - VSP 5000 Series Installation exam is a great way for professionals to demonstrate their skills and knowledge in the storage and data management industry. HQT-4160 exam is designed to be challenging and requires candidates to have a good understanding of the subject matter. Passing HQT-4160 Exam is a great way for professionals to enhance their career prospects and to demonstrate their commitment to their profession.

Hitachi Vantara Qualified Professional - VSP 5000 Series Installation Sample Questions (Q42-Q47):

NEW QUESTION # 42

You need to create Parity Groups on a VSP 5100. Which three actions must you perform?
(Choose three.)

- A. Use the Web Console to select the appropriate drive type.
- B. Use Storage Navigator to create the Parity Groups.
- C. Mount the drives in the appropriate slots of the Disk Unit (DKU).

- D. Use the Maintenance Utility to choose the drive allocation method (Manual or Automatic).
- E. Use the Maintenance Utility to add the drives that you want to allocate to these Parity Groups.

Answer: B,C,D

Explanation:

Use Storage Navigator to create the Parity Groups.

Parity Groups are created and managed through the Storage Navigator interface.

Use the Maintenance Utility to choose the drive allocation method (Manual or Automatic).

The Maintenance Utility allows you to specify how drives will be allocated to Parity Groups, either manually or automatically.

Mount the drives in the appropriate slots of the Disk Unit (DKU).

Drives must be physically installed in the correct DKU slots before they can be assigned to Parity Groups.

NEW QUESTION # 43

Which two steps should you perform before a VSP 5000 system installation? (Choose two.)

- A. Ensure you have a Windows laptop configured as Maintenance laptop prior to the installation.
- B. Use the Maintenance manual to check any power and environmental requirements.
- C. Use the Administrator manual to provide the customer with a list of suitable IP addresses for their public network.
- D. Ensure that you have the 3 CE jumpers required to configure the system.

Answer: A,B

Explanation:

Use the Maintenance manual to check any power and environmental requirements.

Reviewing the Maintenance manual ensures that the installation site meets all necessary power and environmental specifications for the VSP 5000 system.

Ensure you have a Windows laptop configured as Maintenance laptop prior to the installation.

A properly configured Maintenance laptop is essential for system setup, configuration, and troubleshooting during the installation process.

NEW QUESTION # 44

When a hot spare drive is activated in a VSP 5000 system, it's important to:

- A. Reconfigure the RAID settings
- B. Perform a full backup of the system
- C. Immediately order a replacement for the hot spare
- D. Power down the system to avoid data loss

Answer: C

Explanation:

In the Hitachi VSP 5000 storage system, a hot spare is a drive reserved to automatically replace a failing drive in a RAID group.

When it is activated:

The hot spare takes over the failed drive, and RAID rebuild begins.

At this point, the system no longer has a spare available for future failures.

Therefore, it is critical to order and install a new hot spare as soon as possible to maintain full redundancy and data protection.

NEW QUESTION # 45

The creation of Parity Groups is essential for which aspect of VSP 5000 storage systems?

- A. User management
- B. Data protection and performance
- C. Network configuration
- D. Power consumption reduction

Answer: B

Explanation:

In the Hitachi VSP 5000 storage system, Parity Groups are used to implement RAID configurations, which are fundamental for:
Data protection - Parity information allows the system to rebuild data in case of a drive failure, preventing data loss.

Performance optimization - Spreading data across multiple drives with parity improves read/write throughput and I/O efficiency.

Parity Groups are essentially the building blocks of storage pools, and they determine the balance between capacity, redundancy, and performance.

NEW QUESTION # 46

A customer wants to upgrade a diskless VSP 5100 to a VSP 5500. Which three types of components will be added during the upgrade? (Choose three.)

- A. Channel Boards (CHBs)
- B. Hitachi Service and Network Box (HSNBX)
- C. Hitachi Interconnect Edges (HIEs)
- D. Controllers (CTLs)
- E. Interconnect Switches (ISWs)

Answer: A,D,E

Explanation:

Controllers (CTLs)

Upgrading from a two-controller (2N) VSP 5100 to a four-controller (4N) VSP 5500 requires adding two additional controller blades, doubling the total from two to four to deliver the higher I/O and cache capacity of the 5500.

Interconnect Switches (ISWs)

The VSP 5500 introduces external PCIe "node interconnect switches" - 1 U switch chassis that provide the high-speed fabric and management links between controller pairs. These ISW modules must be added to interconnect the expanded controller set in a 4-node configuration.

Channel Boards (CHBs)

Each new controller requires its own set of front-end channel boards for host connectivity. When you add two controllers, you also add their associated CHBs (FC, iSCSI, FICON, etc.) to furnish the additional host ports on the VSP 5500.

NEW QUESTION # 47
