試験の準備方法-正確的なACD201前提条件試験-認定するACD201過去問無料

短時間で給料を2倍にしたいですか？ はい、それは夢ではありません。 ACD201最新の学習ガイドがお手伝いします。 IT分野は競争が激しくなっています。 Appian認定は、そのために役立ちます。 最新のACD201学習ガイドで認定を取得すると、キャリアが変わる可能性があります。 Appianの会社または製品に関する仕事に応募する場合、有用な認定資格は非常に優れた利点をもたらします。 ACD201の最新の学習ガイドのほんの数十ドルが、100%合格試験と24時間のワーム支援サービスを支援します。

Appian Senior Developer 認定 ACD201 試験問題 (Q88-Q93):

質問 # 88

You're designing an integration object with JSON (application/json) as the content type.
Which two data types can be automatically converted to JSON in Appian? (Choose two.)

- A. Base64 documents inline with JSON
- **B. Primitive data types**
- C. HTML file type
- **D. Appian Custom data type**

正解: B、D

解説:

Appian Custom data types (CDTs) can be automatically converted to JSON for integration.
Primitive data types such as text, number, and boolean are also automatically converted to JSON.

質問 # 89

You're in the process of deploying a package to the client's TEST environment at the end of a sprint. This package is only relating to changes to a single application.

Which two statements best describes the practices you should follow for automated testing for expression rules either before or after deploying the package? (Choose two.)

- **A. Before using Compare and Deploy, individually evaluate the test cases in the expression rules you intend to deploy. For any failed test case, adjust the expression rule so that it passes.**
- B. During Compare and Deploy, the Inspect Deployment tab automatically runs the test cases in each of the expression rules. Review these findings, and either adjust the expression rule or delete outdated test cases.
- **C. After deploying the package, you should perform regression testing by running the Start Rule Tests (Applications) smart service to automatically run the test cases. This indicates whether there are any impacts caused by changes to the application.**
- D. After deploying the package, you should perform regression testing by running the Start Rule Tests (All) smart service to automatically run the test cases. This indicates whether there are any impacts caused by the changes across multiple applications.

正解: A、C

解説:

Individually evaluating and fixing expression rule test cases before deployment ensures the new package does not introduce errors. Running regression tests after deployment using the Start Rule Tests (Applications) smart service validates that the deployed changes did not negatively impact the application.

質問 # 90

There are two record types, ABC and XYZ, with sync enabled. The XYZ record type is added as a relationship into the ABC record type.

A user has Viewer permission to the ABC record type but does not have access to the XYZ record type.

A site page is presented to the user where the data is sourced from the ABC record type and its related record type the XYZ reference.

What information does the user see on the site page?

- **A. Page does not load and an error message is presented: "The record type [identifier=XYZ] does not exist, has been deleted, or you do not have sufficient privileges to access its data."**
- B. Page is presented to the user with the XYZ record type data and fields references redacted.
- C. Page is presented to the user and the data references to the XYZ record type appear as "null".

正解: A

解説:

Because the interface references fields on the XYZ record type, the user must have at least Viewer permission on XYZ as well as on ABC. Since the user lacks access to XYZ, the query cannot be executed and the page fails to load, displaying the error:

"The record type [identifier = XYZ] does not exist, has been deleted, or you do not have sufficient privileges to access its data."

質問 #91

You're creating an application which has integrations with multiple systems using different protocols.

Match each process model component or node to the appropriate protocol.

Note: Each protocol will be used once. To change your responses, you may deselect your response by clicking the blank space at the top of the selection list.

The screenshot shows three smart service nodes in the Appian interface, each with a dropdown menu to select a protocol. The protocols are REST, SOAP, and SMTP. The first node is 'Call Web Service smart service', the second is 'Start event and a receive message trigger', and the third is 'Call Integration smart service'. The 'appian' logo is visible at the bottom.

Smart Service	Selected Protocol
Call Web Service smart service	REST
Start event and a receive message trigger	SOAP
Call Integration smart service	SMTP

正解:

解説:

Call Web Service smart service

Select a match:

REST	☐
SOAP	☐
SMTP	☐

Start event and a receive message trigger

Select a match:

REST	☐
SOAP	☐
SMTP	☐

Call Integration smart service

Select a match:

REST	☐
SOAP	☐
SMTP	☐

Call Web Service smart service

Select a match:

REST	☐
SOAP	☒
SMTP	☐

Start event and a receive message trigger

Select a match:

REST	☐
SOAP	☐
SMTP	☒

Call Integration smart service

Select a match:

REST	☒
SOAP	☐
SMTP	☐

質問 #92

You need to create a web API so that an external system can start a process in your app.

Which two statements are true about using a service account to authenticate the system? (Choose two.)

- A. The service account must be granted access to that web API via group management.
- B. The service account must be configured from within the web API object.
- C. The service account must be a user in the Service Accounts group.
- D. The service account is created as any other object in Appian.

正解: A、C

解説:
