Answer: D

NEW QUESTION # 31

Which two objects support creating queues?
Choose 2 answers.

- A. Opportunity.
- B. Account.
- C. Lead.
- D. Case.

Answer: C,D

NEW QUESTION # 32

A developer at Universal Container is building an integration within a managed package for their internal org that requires login to an external system. The end point requires basic authentication. The Architect would like to ensure that the username and password are managed securely. Which three options should the Architect recommend to secure the credentials?

- A. Store the credentials in protected custom metadata that are used in the apex callout
- B. Store the credentials in the apex code, which will not be available to non-admins
- C. Store the credentials in named credentials that are used in the apex callout
- D. Store the credentials in protected custom settings that are used in the apex callout
- E. Store the credentials in a custom object using encrypted fields

Answer: A,C,D

Explanation:

Explanation

Named Credentials, Protected Custom Metadata, and Protected Custom Settings are three options to secure the credentials for the

external system. They allow the developer to store the credentials in a secure way that is not exposed to other users or packages. Storing the credentials in a custom object using encrypted fields or in the apex code are not secure options

NEW QUESTION # 33

Universal containers (UC) implemented a private organization-wide default for the Container and Case objects. How can UC give support representatives access to Container and Case records owned by Customer Community users?
