최신 SAP Certified Associate C-BCWME-2504 무료샘플문제 (Q27-Q32):

질문 # 27

What is the role of the WalkMe snippet in the deployment process?

- **A. It enables WalkMe content to be displayed over applications**
- B. It customizes content for each user group
- C. It ensures compatibility with all versions of application software
- D. It secures user data through encryption

정답: A

설명:

The primary role of the WalkMe snippet in the deployment process is:

B. It enables WalkMe content to be displayed over applications

Why this is correct

WalkMe's snippet is a small JavaScript snippet that's added to the application's codebase. It functions as the core mechanism that:

* Loads and overlays WalkMe guidance (like Smart Walk-Thrus, tooltips, menus) onto target applications

* Differentiates between Test and Production environments-only injected when appropriate-so content is shown in the correct setting.

Without the snippet, WalkMe content built in the Editor would not render within the application UI.

Why the other options are incorrect

* A. Ensuring compatibility with all versions of application software

While snippet compatibility is important, its core function isn't version matching-it's content delivery.

* C. Securing user data through encryption

Security and encryption are managed via WalkMe's backend, CDN delivery, and network infrastructure- not the snippet itself.

* D. Customizing content for each user group

Segmentation and content targeting are handled by WalkMe's configuration (Conditions/Segments), not by the snippet.

Final Answer

B. It enables WalkMe content to be displayed over applications.
