

NCP-MCI-7.5 practice braindumps & NCP-MCI-7.5 test prep cram

The Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) web-based practice test works on all major browsers such as Safari, Chrome, MS Edge, Opera, IE, and Firefox. Users do not have to install any excessive software because this Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) practice test is web-based. It can be accessed through any operating system like Windows, Linux, iOS, Android, or Mac. Another format of the practice test is the desktop software. It works offline only on Windows. Our Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 (NCP-MCI-7.5) desktop-based practice exam software comes with all specifications of the web-based version.

We've always put quality of our NCP-MCI-7.5 study guide on top priority. We don't strongly chase for the number of products we have manufactured. Each NCP-MCI-7.5 test engine will go through strict inspection from many aspects such as the operation, compatibility test and so on. Also, we have final random sampling survey before we sale our NCP-MCI-7.5 practice material to our customers. The quality inspection process is completely strict. The most professional experts of our company will check the study guide and deal with the wrong parts. What you have bought will totally have no problem. That is why we can survive in the market now. Our company is dedicated to carrying out the best quality NCP-MCI-7.5 Test Engine. Any small mistake is intolerant. You can buy our products at ease.

NCP-MCI-7.5 Latest Exam Pdf | NCP-MCI-7.5 Pass Guide

For candidate who wants a better job through obtaining a certificate, passing the exam becomes significant. Our NCP-MCI-7.5 Study Materials will offer you a chance like this. Our NCP-MCI-7.5 study guide is known for the high quality and high accuracy. We are pass guarantee and money back guarantee for our customers. If you can get the certificate, you will have a better competitive power in the job market and have more opportunity.

Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 Sample Questions (Q73-Q78):

NEW QUESTION # 73

An administrator is running Nutanix Cluster Check (NCC) in the Prism Element web console. The administrator is not able to collect the logs.

What could be causing this?

- A. Log collection can only be done from the command line.
- B. Nutanix cannot collect logs within Prism Element.
- **C. Nutanix cannot collect the logs while running NCC.**
- D. Logs can only be collected via a Syslog collector.

Answer: C

Explanation:

Nutanix documentation confirms that Prism Element supports both NCC execution and log collection from the web console, so options A and B are incorrect. However, Nutanix also distinguishes running checks from collecting logs as separate actions.

Operationally, if the administrator is actively running NCC at that moment, log collection is not available until that task is no longer in progress. That is why the most likely explanation is that logs cannot be collected while NCC is running. (Nutanix) This is a classic UI workflow question. Nutanix does allow log bundle collection from the web console, and newer NCC/Logbay capabilities even extend collection options further. But that does not mean every action is available concurrently. The supported mental model is: run checks, review output, then collect logs as needed.

Since the question specifically says the administrator is running NCC and is not able to collect logs, the best explanation is the conflict between those two operations at the same time. Therefore, D is the correct answer.

(Nutanix)

NEW QUESTION # 74

An administrator needs to give a user group access to resources from multiple clusters. Which action must be performed in Prism Central?

- A. Enable Advanced Network Controller
- B. Enable Micro Services Platform
- C. Configure Availability Zone
- **D. Configure Nutanix Projects**

Answer: D

Explanation:

Nutanix documentation explains that Projects in Prism Central provide logical groupings of infrastructure resources and user access, and that you can add users and user groups to a project while also allowing clusters and subnets in that project. That is exactly the mechanism used when a user group needs controlled access to resources drawn from multiple clusters. The project becomes the governance boundary that ties users, roles, and infrastructure scope together. Therefore A. Configure Nutanix Projects is the correct answer. (Nutanix Portal) The other choices are unrelated to access scoping across clusters. Advanced Network Controller deals with networking services and policy capabilities, not user resource assignment. Micro Services Platform is not the RBAC/governance feature for multi-cluster access. Availability Zone is relevant for placement and DR topologies, not for delegating cluster resources to user groups. Nutanix's governance guidance is clear that Projects are the construct used to organize infrastructure resources and assign them to users or groups with the proper RBAC controls. So for a user group that needs access to resources from multiple clusters, the authentic Prism Central action is A. (Nutanix Portal)

NEW QUESTION # 75

How many S3 targets are supported for Prism Central point-in-time backups?

- A. 0
- **B. 1**
- C. 2
- D. 3

Answer: B

Explanation:

Nutanix documentation for Prism Central point-in-time backup states that the system supports one point-in-time backup target at a time. Nutanix further documents that Prism Central can be backed up to registered clusters, Nutanix Objects, AWS S3, or generic S3-compliant storage, but the platform still supports only one active point-in-time backup target concurrently. Therefore the correct answer is A. 1.

This question is easy to overthink because the product supports multiple target types, but that is different from supporting multiple simultaneous configured S3 targets for one Prism Central instance. Nutanix's wording is explicit and leaves little ambiguity: one backup target at a time. That means answers B, C, and D are not consistent with the documented PC backup design. So for a study guide grounded in current official Nutanix documentation, the authentic answer is A.

NEW QUESTION # 76

An administrator needs to protect a set of workloads across three sites (Site A, Site B, Site C) managed by different Prism Central instances. Which is the most efficient way to protect such VMs?

- A. Create three different protection policies, one per Prism Central.
- B. Create a single protection policy from Site A and clone it to Site B and Site C.
- C. Create two protection policies, one from site A to B and one from site A to C.
- **D. Create a single protection policy for all three sites from the source cluster.**

Answer: D

Explanation:

Nutanix documentation for multisite disaster recovery states that a protection policy can include multiple replication schedules across up to three different recovery clusters, and Nutanix also documents the ability to configure multisite replication schedules for up to three recovery clusters with different schedules. That means a source site can protect workloads to multiple destinations without requiring separate, duplicated protection policies for each site. Given the options, the most efficient approach is therefore one protection policy from the source cluster covering all three sites, which is option D.

The answer choices that create multiple separate protection policies are less efficient and introduce avoidable administrative duplication. Cloning policies across sites also misses the point of Nutanix's native multisite capability. Even though the sites are managed by different Prism Central instances, Nutanix documents DR support between clusters registered to different Prism Central instances as well. So the most scalable and documentation-aligned answer is D.

NEW QUESTION # 77

An administrator configures network segmentation and places the Data Services IP (DSIP) in a secondary non-routable subnet while the cluster is registered to Prism Central. Prism Central cannot initiate or complete cluster upgrades. How should the administrator resolve this issue?

- A. Disable segmentation on the local cluster until the next upgrade cycle.
- B. Enable proxy ARP within the Nutanix VLAN to establish reachability.
- **C. Configure an additional DSIP within the original subnet used for PC communication.**
- D. Use a single uplink because segmented networks do not tolerate redundancy.

Answer: C

Explanation:

Nutanix security and network-segmentation documentation clearly states that the segmented DSIP and the regular cluster DSIP are different entities, and that Prism Central needs a cluster DSIP in the same subnet to upgrade. In other words, placing the DSIP only in a secondary non-routable segment can break Prism Central's ability to perform upgrades if Prism Central cannot reach the cluster using the expected subnet path. The documented fix is to maintain or configure a DSIP in the original communication subnet that Prism Central can use. That makes C the correct answer.

The other options are not the Nutanix-documented solution. Proxy ARP is not the prescribed remedy here, and disabling segmentation is unnecessary if the communication requirement can be satisfied by adding the proper DSIP. Uplink redundancy has

nothing to do with the management-plane reachability issue in the question. So the authentic fix is to configure an additional DSIP in the original subnet used for Prism Central communication, which is C.

NEW QUESTION # 78

.....

Keep making progress is a very good thing for all people. If you try your best to improve yourself continuously, you will that you will harvest a lot, including money, happiness and a good job and so on. The NCP-MCI-7.5 preparation exam from our company will help you keep making progress. Choosing our NCP-MCI-7.5 Study Material, you will find that it will be very easy for you to overcome your shortcomings and become a persistent person. Our NCP-MCI-7.5 exam dumps will lead you to success!

NCP-MCI-7.5 Latest Exam Pdf: https://www.getcertkey.com/NCP-MCI-7.5_braindumps.html

Getcertkey Is Here To Provide Top-Notch Nutanix NCP-MCI-7.5 Exam Questions, There is no doubt that the pass rate of IT exam is the most essential criteria to check out whether our NCP-MCI-7.5 learning materials: Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 are effective or not, Choose NCP-MCI NCP-MCI-7.5 exam study materials, we guarantee pass for sure, Nutanix NCP-MCI-7.5 Latest Dump These three files are suitable for customers' different demands.

A public chat message is sent from a user in a room to that room at NCP-MCI-7.5 large—that is, broadcast to all users in that room, Technology advocates often miss many factors while building their business case.

Quiz 2026 The Best NCP-MCI-7.5: Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 Latest Dump

Getcertkey Is Here To Provide Top-Notch Nutanix NCP-MCI-7.5 Exam Questions, There is no doubt that the pass rate of IT exam is the most essential criteria to check out whether our NCP-MCI-7.5 learning materials: Nutanix Certified Professional - Multicloud Infrastructure (NCP-MCI) 7.5 are effective or not.

Choose NCP-MCI NCP-MCI-7.5 exam study materials, we guarantee pass for sure, These three files are suitable for customers' different demands, Since decades of years, Getcertkey NCP-MCI-7.5 Latest Exam Pdf was evolving from an unknown small platform to a leading IT exam dumps provider.
