The CISM pass review written by our IT professionals is the best solution for passing the technical and complex certification exam.

ISACA Certified Information Security Manager Sample Questions (Q745-Q750):

NEW QUESTION # 745

Which of the following processes is critical for deciding prioritization of actions in a business continuity plan?

- A. Risk assessment
- B. Vulnerability assessment
- C. Business process mapping
- **D. Business impact analysis (BIA)**

Answer: D

Explanation:

Explanation

A business impact analysis (BIA) provides results, such as impact from a security incident and required response times. The BIA is the most critical process for deciding which part of the information system/ business process should be given prioritization in case of a security incident. Risk assessment is a very important process for the creation of a business continuity plan. Risk assessment provides information on the likelihood of occurrence of security incidence and assists in the selection of countermeasures. but not in the prioritization. As in choice B, a vulnerability assessment provides information regarding the security weaknesses of the system, supporting the risk analysis process. Business process mapping facilitates the creation of the plan by providing mapping guidance on actions after the decision on critical business processes has been made-translating business prioritization to IT prioritization. Business process mapping does not help in making a decision, but in implementing a decision.

NEW QUESTION # 746

Which of the following is the BEST way to ensure the organization's security objectives are embedded in business operations?

- A. Perform annual information security compliance reviews.
- B. Define penalties for information security noncompliance.
- C. Publish adopted information security standards.
- **D. Implement an information security governance framework.**

Answer: D

Explanation:

The best way to ensure the organization's security objectives are embedded in business operations is to implement an information security governance framework. An information security governance framework is a set of policies, procedures, standards, guidelines, roles, and responsibilities that define and direct how the organization manages and measures its information security activities. An information security governance framework helps to align the information security strategy with the business strategy and the organizational culture, and to ensure that the information security objectives are consistent with the business objectives and the stakeholder expectations. An information security governance framework also helps to establish the authority, accountability, and communication channels for the information security function, and to provide the necessary resources, tools, and controls to implement and monitor the information security program. By implementing an information security governance framework, the organization can embed the information security objectives in business operations, and ensure that the information security function supports and enables the business processes and functions, rather than hinders or restricts them.

NEW QUESTION # 747

An information security program is BEST positioned for success when it is closely aligned with:

- **A. the information security strategy.**
- B. information security policies.
- C. recognized industry frameworks.
- D. information security best practices.

Answer: A

NEW QUESTION # 748

Which of the following devices should be placed within a DMZ?

- A. Proxy server
- B. Departmental server
- C. Application server
- D. Data warehouse server

Answer: C

Explanation:

Explanation/Reference:

Explanation:

An application server should normally be placed within a demilitarized zone (DMZ) to shield the internal network. Data warehouse and departmental servers may contain confidential or valuable data and should always be placed on the internal network, never on a DMZ that is subject to compromise. A proxy server forms the inner boundary of the DMZ but is not placed within it.

NEW QUESTION # 749

When contracting with an outsourcer to provide security administration, the MOST important contractual element is the:

- A. limitations of liability.
- B. service level agreement (SLA).
- C. right-to-terminate clause.
- D. financial penalties clause.

Answer: B

Explanation:

Explanation/Reference:

Explanation:

Service level agreements (SLAs) provide metrics to which outsourcing firms can be held accountable. This is more important than a limitation on the outsourcing firm's liability, a right-to-terminate clause or a hold-harmless agreement which involves liabilities to third parties.

NEW QUESTION # 750

.....

Testing yourself is an effective way to enhance your knowledge and become familiar with the CISM exam format. Rather than viewing the CISM test as a potentially intimidating event, DumpsKing Certified Information Security Manager (CISM) desktop and web-based practice exams help candidates assess and improve their knowledge. If your CISM Practice Exams (desktop and web-based) results aren't ideal, it's better to experience that shock during a mock exam rather than the CISM actual test.
