Many people may worry that the JN0-351 guide torrent is not enough for them to practice and the update is slowly. We guarantee you that our experts check whether the JN0-351 study materials is updated or not every day and if there is the update the system will send the update to the client automatically. So you have no the necessity to worry that you don't have latest JN0-351 Exam Torrent to practice. We provide the best service to you and hope you are satisfied with our product and our service.

Actual Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) dumps are designed to help applicants crack the Juniper JN0-351 test in a short time. There are dozens of websites that offer JN0-351 exam questions. But all of them are not trustworthy. Some of these platforms may provide you with Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) invalid dumps. Upon using outdated Juniper JN0-351 dumps you fail in the Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) test and lose your resources.

Get TestkingPDF Juniper JN0-351 Real Questions Today with Free Updates for 365 Days

We can assure to all people that our study materials will have a higher quality and it can help all people to remain an optimistic mind when they are preparing for the JN0-351 exam, and then these people will not give up review for the exam. On the contrary, people who want to pass the exam will persist in studying all the time. We deeply believe that the JN0-351 Study Materials from our company will be most suitable and helpful for all people.

Juniper JN0-351 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> IS-IS: Aspiring Juniper networking professionals enhance their understanding of IS-IS routing protocols. This topic equips candidates with the knowledge to configure and monitor IS-IS systems, addressing specific exam challenges and practical applications.
Topic 2	<ul style="list-style-type: none"> Layer 2 Security: This topic introduces Layer 2 protection mechanisms and firewall filters to fortify network security. Practical skills in configuring, monitoring, and troubleshooting these features prepare candidates to address exam objectives and real-world challenges effectively.
Topic 3	<ul style="list-style-type: none"> High Availability: This topic covers the importance and application of high availability within Junos OS environments. Knowledge in configuring and managing these components is critical for ensuring robust and uninterrupted network operations, aligning with exam expectations.
Topic 4	<ul style="list-style-type: none"> BGP: This topic focuses on the operational and conceptual elements of BGP, a cornerstone in enterprise networks.
Topic 5	<ul style="list-style-type: none"> Layer 2 Switching or VLANs: This topic deepens the understanding of Layer 2 switching operations within the Junos OS, including VLAN concepts and benefits. Experienced networking professionals gain insights into configuration, monitoring, and troubleshooting techniques essential for network segmentation and efficiency.
Topic 6	<ul style="list-style-type: none"> Protocol Independent Routing: An essential domain for understanding routing components outside protocol dependencies, this topic enhances expertise in configuring, monitoring, and troubleshooting critical elements.

Juniper Enterprise Routing and Switching, Specialist (JNCIS-ENT) Sample Questions (Q79-Q84):

NEW QUESTION # 79

What is the default MAC age-out timer on an EX Series switch?

- A. 30 seconds
- B. 30 minutes
- C. 300 minutes
- D. 300 seconds

Answer: D

Explanation:

The default MAC age-out timer on an EX Series switch is 300 seconds [1]. The MAC age-out timer is the maximum time that an entry can remain in the MAC table before it "ages out," or is removed [2]. This configuration can influence efficiency of network resource use by affecting the amount of traffic that is flooded to all interfaces [1]. When traffic is received for MAC addresses no longer in the Ethernet routing table, the router floods the traffic to all interfaces [1].

NEW QUESTION # 80

You are a network operator troubleshooting BGP connectivity.

Which two statements are correct about the output shown in the exhibit? (Choose two.)

```

user@R1> show bgp neighbor
Peer: 10.32.1.2+63645 AS 65401 Local: 10.32.1.1+179 AS 65400
Description: EBGP peering to 10.32.1.2
Group: IPCLOS_eBGP Routing-Instance: master
Forwarding routing-instance: master
Type: External State: Established Flags: <Sync>Last
State: OpenConfirm Last Event: RecvkeepAlive
Last Error: None
Export: [ IPCLOS_BGP_EXP ] Import: [ IPCLOS_BGP_IMP ]
Options: <Preference PeerAS Multipath LocalAS Refresh>
Options: <VpnApplyExport MtuDiscovery MultipathAs BfdEnabled>
Holdtime: 90 Preference: 170 Local AS: 65400 Local System AS: 0
Number of flaps: 0
Peer ID: 10.52.100.2 Local ID: 10.52.100.1 Active Holdtime: 90
Keepalive Interval: 30 Group index: 0 Peer index: 0 SNMP
index: 0
I/O Session Thread: bgpio-0 State: Enabled
BFD: enabled, up
Local Interface: ge-0/0/1.0
NLRI for restart configured on peer: inet-unicast
NLRI advertised by peer: inet-unicast
NLRI for this session: inet-unicast
Peer supports Refresh capability (2)
Stale routes from peer are kept for: 300
Peer does not support Restarter functionality
Restart flag received from the peer: Notification
NLRI that restart is negotiated for: inet-unicast
NLRI of received end-of-rib markers: inet-unicast
NLRI of all end-of-rib markers sent: inet-unicast
Peer does not support LLGR Restarter functionality
Peer supports 4 byte AS extension (peer-as 65401)
Peer does not support Addpath
Table inet.0 Bit: 20000
  RIB State: BGP restart is complete
  Send state: in sync
  Active prefixes:          6
  Received prefixes:       9
  Accepted prefixes:       9
  Suppressed due to damping: 0
  Advertised prefixes:     22
Last traffic (seconds): Received 22 Sent 10 Checked 69617
Last Input messages: Total 2568 Updates 4 Refreshes 0 Octets 48991
Output messages:     Total 2572 Updates 8 Refreshes 0 Octets 49362
Output Queue[1]: 0 (inet.0, inet-unicast)

```

- A. The routers are exchanging IPv4 routes.
- B. Peer 10.32.1.2 is configured for AS 63645.
- C. The BGP session is not established.
- D. The R1 is configured for AS 65400.

Answer: A,D

Explanation:

The local AS is 65400, as indicated by "Local AS: 65400".

The output shows "NLRI for this session: inet-unicast", which indicates that the routers are exchanging IPv4 unicast routes.

NEW QUESTION # 81

Your GRE tunnel is not transitioning to the Up status.

What would be the first step in troubleshooting the problem?

- A. Verify that the status of the management interface is up.
- B. Verify the status of the management routing instance.
- **C. Verify tunnel endpoint reachability.**
- D. Verify that the routing instance for GRE tunnels is created.

Answer: C

NEW QUESTION # 82

Referring to the exhibit, which two configuration changes must you apply for packets to reach from R1 to R3 using IS-IS? (Choose two.)

- A. On R3 disable Level 2 on the ge-0/0/4 interface.
- **B. On R3 enable Level 1 on the ge-0/0/4 interface**
- C. On R1, disable Level 2 on the ge-0/0/1 interface.
- **D. On R1, enable Level 1 on the ge-0/0/1 interface.**

Answer: B,D

Explanation:

A) On R1, enable Level 1 on the ge-0/0/1 interface. In IS-IS, both levels (Level 1 and Level 2) are enabled by default when you enable IS-IS on an interface. Level 1 systems route within an area.

If the destination is outside an area, Level 1 systems route toward a Level 2 system. Therefore, enabling Level 1 on the ge-0/0/1 interface on R1 would allow packets to reach from R1 to R3.

D) On R3 enable Level 1 on the ge-0/0/4 interface Similarly, enabling Level 1 on the ge-0/0/4 interface on R3 would allow packets to reach from R1 to R3. These explanations are based on the IS-IS configuration documents and learning resources available at Juniper Networks¹ and Cisco.

NEW QUESTION # 83

Referring to the exhibit, which statement is correct?

```
user@switch> show spanning-tree bridge
```

STP bridge parameters

```
Context ID : 0
Enabled protocol : RSTP
Root ID : 4096.00:19:e2:55:36:1e
Root cost : 40000
Root port : ge-0/0/13.0
Hello time : 2 seconds
Maximum age : 20 seconds
Forward delay : 15 seconds
Message age : 2
Number of topology changes : 2
Time since last topology change : 72 seconds
Local parameters
  Bridge ID : 32768.00:19:e2:55:1d:30
  Extended system ID : 0
  Internal instance ID : 0
```

- A. The root bridge is using a bridge priority of 4k.
- B. The root bridge has not been elected for this RSTP topology.
- C. The local device is the root bridge for this RSTP topology.
- D. The local device is using a bridge priority of 4k.

Answer: A

Explanation:

The "Root ID" shows 4096.00:19:e2:55:36:1e. The first part of this ID, 4096, is the bridge priority of the root bridge.

The local bridge ID is shown as 32768.00:19:e2:55:1d:30, indicating that the local device has a default bridge priority of 32768, which is higher (and thus less preferred) than 4096.

Thus, the root bridge has a priority of 4096, and the local device is not the root bridge. The local device is participating in the RSTP topology and has identified another bridge as the root.

NEW QUESTION # 84

.....

In addition to the PDF questions TestkingPDF offers desktop Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) practice exam software and web-based Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) practice exam, to help you cope with Enterprise Routing and Switching, Specialist (JNCIS-ENT) (JN0-351) exam anxiety. These Juniper JN0-351 Practice Exams simulate the actual Juniper JN0-351 exam conditions and provide you with an accurate assessment of your readiness for the JN0-351 exam.
