Pass Guaranteed Quiz Fortinet - EMEA-Advanced-Support - High-quality Reliable Fortinet EMEA Advanced Support Exam Exam Bootcamp

Will you feel that the product you have brought is not suitable for you? One trait of our EMEA-Advanced-Support exam prepare is that you can freely download a demo to have a try. Because there are excellent free trial services provided by our EMEA-

Advanced-Support exam guides, our products will provide three demos that specially designed to help you pick the one you are satisfied. On the one hand, by the free trial services you can get close contact with our products, learn about the detailed information of our EMEA-Advanced-Support Study Materials, and know how to choose the right version of our EMEA-Advanced-Support exam questions.

Fortinet EMEA Advanced Support Exam Sample Questions (Q21-Q26):

NEW QUESTION # 21

Hybrid cloud means that

- A. One customer uses VMs with multiple different operating systems in the same cloud account
- B. The cloud provider uses AMD, Intel and possibly also other CPU vendors
- C. Some of the customer's systems are virtualized in the public cloud and some are in the local datacenter
- D. Cloud provider provides both 32-bit and 64-bit virtual machines

Answer: C

Explanation:

A hybrid cloud combines on-premises infrastructure (local datacenter) with public cloud resources, allowing workloads to operate across both environments for flexibility and scalability. Fortinet solutions like FortiGate- VM support hybrid cloud deployments. Option A refers to hardware diversity, C to OS variety, and D to architecture types, none of which define hybrid cloud. Exact extract: "Hybrid cloud is the combination of public cloud services with an on-premises private cloud or datacenter... This allows customers to run some systems in the public cloud and others in their local datacenter, managed seamlessly."

NEW QUESTION # 22

Which of the following protocols operates at Layer 4

- A. OSPF
- B. BGP
- C. IPSEC
- D. ARP

Answer: C

Explanation:

IPsec operates at Layer 4 (Transport Layer) in the OSI model, providing secure communication via protocols like ESP and AH, which work with TCP or UDP. BGP and OSPF are Layer 3 (Network Layer) routing protocols, and ARP operates at Layer 2 (Data Link Layer). Fortinet's FortiGate uses IPsec for VPNs at Layer

4. Exact extract: "IPsec operates at the Transport Layer (Layer 4) to secure communications, encapsulating TCP or UDP packets... BGP and OSPF function at the Network Layer, while ARP resolves IP to MAC addresses at the Data Link Layer."

NEW QUESTION # 23

What happens when a FortiGate detects a SYN flood attack?

- A. It drops all incoming packets
- B. It redirects traffic to a backup gateway
- C. It enables proxy-based inspection
- D. It applies rate limiting to SYN packets

Answer: D

Explanation:

When FortiGate detects a SYN flood attack, it applies rate limiting to SYN packets via a DoS policy, dropping excessive packets to mitigate the attack. It does not drop all packets (A), enable proxy inspection (B), or redirect traffic (D). Exact extract: "FortiGate mitigates SYN flood attacks using DoS policies, which apply rate limiting to SYN packets to prevent overwhelming the system."

NEW QUESTION # 24

Which FortiGate feature allows for policy-based routing?

- A. Dynamic Routes
- B. SD-WAN Rules
- **C. Policy Routes**
- D. Static Routes

Answer: C

Explanation:

Policy Routes in FortiGate allow routing decisions based on criteria like source, destination, or service, overriding the default routing table. SD-WAN Rules (A) are for WAN optimization, Static Routes (C) are fixed, and Dynamic Routes (D) are protocol-based, not policy-based. Exact extract: "Policy Routes allow FortiGate to make routing decisions based on user-defined criteria, such as source/destination IPs or services, overriding standard routing."

NEW QUESTION # 25

What are source and destination MAC addresses of an ARP request?

- **A. The source MAC is that of the sending device and the destination MAC is a broadcast address**
- B. The source MAC is that of the sending device and the destination is a multicast address
- C. The source MAC is that of the forwarding switch and destination of the targeted device
- D. The source MAC is that of the sending device and the destination of the targeted device

Answer: A

Explanation:

An ARP (Address Resolution Protocol) request is broadcast to resolve an IP address to a MAC address. The source MAC is the sender's MAC address, and the destination MAC is the broadcast address (FF:FF:FF:FF:FF:FF) to reach all devices on the local network. Fortinet devices handle ARP for Layer 2 communication.

Options B, C, and D are incorrect as switches don't originate ARP requests, the target's MAC is unknown, and ARP uses broadcast, not multicast. Exact extract: "In an ARP request, the source MAC address is that of the sending device, and the destination MAC address is the broadcast address (FF:FF:FF:FF:FF:FF), sent to all devices in the local network segment."

NEW QUESTION # 26

.....

When we are in some kind of learning web site, often feel dazzling, because web page design is not reasonable, put too much information all rush, it will appear desultorily. Absorbing the lessons of the EMEA-Advanced-Support test prep, will be all kinds of qualification examination classify layout, at the same time on the front page of the EMEA-Advanced-Support test materials have clear test module classification, so clear page design greatly convenient for the users, can let users in a very short period of time to find what they want to study, and then targeted to study.
