The trial version of our 300-430 practice test is also available for free on our website. Students can go and check it out to get an idea of the content they wish to pay for. Our prices are also very low in comparison to our competitors as we know that students

cannot afford high-budget practice materials. Just choose the right Dumps Tests Implementing Cisco Enterprise Wireless Networks Questions formats and download quickly and start 300-430 Exam Preparation without wasting further time.

Cisco Implementing Cisco Enterprise Wireless Networks Sample Questions (Q129-Q134):

NEW QUESTION # 129

A wireless engineer has performed a Wireshark capture on an 802.1x authentication process to troubleshoot a connectivity issue. Which two types of packet does the EAP contain? (Choose two.)

- A. EAP failure
- B. EAP reply
- C. EAP complete
- D. EAP request
- E. EAP response

Answer: D,E

Explanation:

The Extensible Authentication Protocol (EAP) is an authentication framework frequently used in wireless networks and Point-to-Point connections. During the EAP authentication process, EAP Request and EAP Response packets are exchanged between the supplicant (client device) and the authenticator (network). These packets are used to transport messages for the authentication process. An EAP Request packet is sent by the authenticator requesting identity information from the supplicant, while an EAP Response packet is sent by the supplicant in reply to the request. The other options, such as EAP complete, EAP failure, and EAP reply, are not standard EAP packet types. NEW QUESTION # 131

An engineer has been hired to implement a way for users to stream video content without having issues on the wireless network. To accomplish this goal, the engineer must set up a reliable way for a Media Stream to work between Cisco FlexConnect APs. Which feature must be enabled to guarantee delivery?

- A. Unicast Direct
- B. Multicast Direct
- C. Multicast-Unicast Direct
- D. IGMP Direct

Answer: C

NEW QUESTION # 132

A wireless network has two RF groups where Cisco WLCs are joined. APs are associated with different controllers using the round-robin approach. Rogue containment must be deployed in all controllers, but the network must not be affected by any RRM
