High Hit Rate HP Latest Braindumps HPE7-A01 Ppt | Try Free Demo before Purchase

One of the biggest highlights of the Aruba Certified Campus Access Professional Exam prep torrent is the availability of three versions: PDF, app/online, and software/pc, each with its own advantages: The PDF version of HPE7-A01 Exam Torrent has a free demo available for download. You can print exam materials out and read it just like you read a paper. The online version of HPE7-A01 test guide is based on web browser usage design and can be used by any browser device. At the same time, the first time it is opened on the Internet, it can be used offline next time. You can practice anytime, anywhere. The Aruba Certified Campus Access Professional Exam software supports the MS operating system and can simulate the real test environment. The contents of the three versions are the same.

When you first contacted us with HPE7-A01 quiz torrent, you may be confused about our HPE7-A01 exam question and would like to learn more about our products to confirm our claims. We have a trial version for you to experience. If you encounter any questions about our HPE7-A01 Learning Materials during use, you can contact our staff and we will be happy to serve for you. As for any of your suggestions, we will take it into consideration, and effectively improve our HPE7-A01 exam question to better meet the needs of clients.

Pass HPE7-A01 Exam, HPE7-A01 Exam Dumps Provider

Being the most competitive and advantageous company in the market, our HPE7-A01 practice quiz have help tens of millions of exam candidates realize their dreams all these years. If you are the dream-catcher, we are willing to offer help with our HPE7-A01 Study Guide like always. And if you buy our HPE7-A01 exam materials, then you will find that passing the exam is just a piece of cake in front of you.

HP Aruba Certified Campus Access Professional Exam Sample Questions (Q41-Q46):

NEW QUESTION # 41
You are building a configuration in Central that will be used for a standardized network design for small sites for your company, you want to use GUI configuration for gateways and Aps, while template configuration for switches. You need to align with Aruba best practices.
Which set of actions will satisfy these requirements?

- A. Create a single group in Central. Create a unique site for each type of device, and assign devices to the appropriate site.
- B. Create one group in Central for switches and a second group for APs and gateways. Create a unique site for each location, and assign devices to the appropriate site.
- C. Create one group in Central for switches a second group for APs. and a third group for gateways Create a unique site for each location, and assign devices to the appropriate site.
- D. Create a single group in Central. Create a unique site for each location, and assign devices to the appropriate site.

Answer: D

Explanation:
This is because option C shows how to create a single group in Central with different configuration methods defined for each device type. For example, you can create a group with the name Group1, and within this group, you can enable template-based configuration method for switches and UI-based configuration method for Instant APs and Gateways. Aruba Central identifies both these groups under a single name (Group1). If a device type in the group is marked for template-based configuration method, the group name is prefixed with TG (TG Group1). You can use Group1 as the group ID for workflows such as user management, monitoring, reports, and audit trail2.

NEW QUESTION # 42
Match the topics with the underlying technologies (Options may be used more than once or not at all.)

Answer:

Explanation:

NEW QUESTION # 43
What is a primary benefit of BSS coloring?

- A. BSS color tags are applied to Wi-Fi channels and can reduce the threshold for interference
- B. BSS color tags improve security by identifying rogue APs and removing them from the network.
- C. BSS color tags are applied to client devices and can reduce the threshold for interference
- D. BSS color tags improve performance by allowing clients on the same channel to share airtime.

Answer: C

Explanation:
Explanation
This is the correct definition of BSS coloring and its primary benefit. BSS coloring is a mechanism that assigns a color code to each BSS (Basic Service Set), which consists of an AP and its associated clients. The color code is added to the PHY header of each frame transmitted by the AP or the client. BSS coloring helps reduce co-channel interference by allowing devices to differentiate between frames from their own BSS and frames from neighboring BSSs that use the same channel. Devices can then adjust their threshold for interference based on the color code and decide whether to transmit or defer based on the channel status. The other

options are incorrect because they either describe different mechanisms or benefits of BSS coloring or use incorrect terms.

NEW QUESTION # 44

You are configuring Policy Based Routing (PBR) for a subnet that will be used to test a new default route for your network Traffic originating from 10.2.250.0/24 should use a new default route to 10.1.1.253. Other non-default routes for this subnet should not be affected by this change.
What are two parts of the solution for these requirements? (Select two.)

- A. □
- B. □
- C. □
- D. □
- E. □

Answer: A,D

Explanation:

Option C is a part of the solution because it defines a policy-based routing action list named route_test, which specifies the next hop IP address as 10.1.1.253 for the matching traffic. This is the new default route that the user wants to use for the subnet 10.2.250.0/24. The interface null parameter indicates that the traffic will be routed to the next hop without using a specific interface.
Option E is a part of the solution because it applies the policy-based routing action list route_test to the VLAN interface 250, which has an IP address of 10.2.250.1/24. This is the subnet that the user wants to test the new default route for. The apply policy command enables policy-based routing on the interface and associates it with the action list.

NEW QUESTION # 45

A company deployed Dynamic Segmentation with their CX switches and Gateways After performing a security audit on their network, they discovered that the tunnels built between the CX switch and the Aruba Gateway are not encrypted. The company is concerned that bad actors could try to insert spoofed messages on the Gateway to disrupt communications or obtain information about the network.
Which action must the administrator perform to address this situation?

- A. Enable Secure Mode Enhanced
- B. Enable GRE security
- C. Enable Enhanced PAPI security
- D. Enable Enhanced security

Answer: C

Explanation:
Explanation
PAPI is the protocol that is used to establish tunnels between the CX switch and the Aruba Gateway for Dynamic Segmentation1.
By default, PAPI uses a simple checksum to verify the integrity of the messages, but it does not encrypt the payload2. This could expose the network to spoofing or replay attacks by malicious actors. To address this situation, the administrator must enable Enhanced PAPI security, which uses AES-256 encryption and HMAC-SHA1 authentication to protect the tunnel traffic2. Enhanced PAPI security can be enabled on the CX switch by using the command system papi enhanced-security enable3. This will ensure that the tunnels built between the CX switch and the Aruba Gateway are encrypted and authenticated.
