Pass Guaranteed Quiz 2026 Newest Microsoft PDF DP-700 Cram Exam
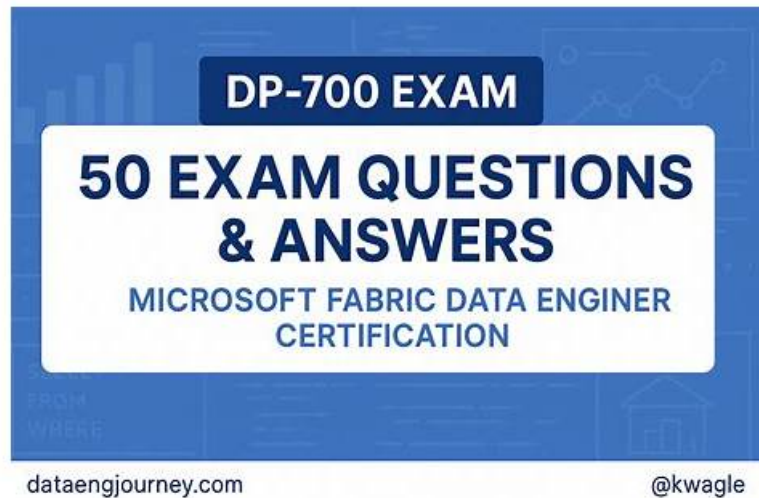

Our company has dedicated ourselves to develop the DP-700 study materials for all candidates to pass the exam easier, also has made great achievement after more than ten years' development. As the certification has been of great value, a right DP-700 study material can be your strong forward momentum to help you pass the exam like a hot knife through butter. On the contrary, it might be time-consuming and tired to prepare for the DP-700 Exam without a specialist study material. So it's would be the best decision to choose our DP-700 study materials as your learning partner.

Microsoft DP-700 Exam Syllabus Topics:

Topic	Details
Topic 1	• Monitor and optimize an analytics solution: This section of the exam measures the skills of Data Analysts in monitoring various components of analytics solutions in Microsoft Fabric. It focuses on tracking data ingestion, transformation processes, and semantic model refreshes while configuring alerts for error resolution. One skill to be measured is identifying performance bottlenecks in analytics workflows.
Topic 2	• Ingest and transform data: This section of the exam measures the skills of Data Engineers that cover designing and implementing data loading patterns. It emphasizes preparing data for loading into dimensional models, handling batch and streaming data ingestion, and transforming data using various methods. A skill to be measured is applying appropriate transformation techniques to ensure data quality.
Topic 3	• Implement and manage an analytics solution: This section of the exam measures the skills of Microsoft Data Analysts regarding configuring various workspace settings in Microsoft Fabric. It focuses on setting up Microsoft Fabric workspaces, including Spark and domain workspace configurations, as well as implementing lifecycle management and version control. One skill to be measured is creating deployment pipelines for analytics solutions.

Dumps Microsoft DP-700 Download - Reliable DP-700 Exam Dumps

Our website has focused on the study of DP-700 vce braindumps for many years and created latest DP-700 dumps pdf for all level of candiates. All questions and answers are tested and approved by our IT professionals who are specialized in the DP-700 Pass Guide. You can completely trust the accuracy of our DP-700 exam questions because we will full refund if you failed exam with our

training materials.

Microsoft Implementing Data Engineering Solutions Using Microsoft Fabric Sample Questions (Q17-Q22):

NEW QUESTION # 17
HOTSPOT
You have a Fabric workspace that contains an eventstream named EventStream1.
You discover that an EventStream1 transformation fails.
You need to find the following error information:
The error details, including the occurrence time
The total number of errors
What should you use? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Answer Area

To find the error details:
- Data insights
- Data preview
- Details
- Runtime logs

To find the total number of errors:
- Data insights
- Data preview
- Details
- Runtime logs

Answer:

Explanation:

Answer Area

To find the error details:
- Data insights
- Data preview
- Details
- **Runtime logs**

To find the total number of errors:
- Data insights
- Data preview
- **Details**
- Runtime logs

NEW QUESTION # 18
You need to recommend a method to populate the POS1 data to the lakehouse medallion layers.
What should you recommend for each layer? To answer, select the appropriate options in the answer area.
NOTE: Each correct selection is worth one point.

Bronze layer:

A Dataflow Gen2 dataflow
A notebook
A pipeline Copy activity
A pipeline stored procedure

Silver layer:

A Dataflow Gen2 dataflow
A notebook
A pipeline Copy activity
A pipeline stored procedure

Answer:

Explanation:

Bronze layer:

A Dataflow Gen2 dataflow
A notebook
A pipeline Copy activity
A pipeline stored procedure

Silver layer:

A Dataflow Gen2 dataflow
A notebook
A pipeline Copy activity
A pipeline stored procedure

Explanation:
A screenshot of a computer Description automatically generated

Bronze layer:

A Dataflow Gen2 dataflow
A notebook
A pipeline Copy activity
A pipeline stored procedure

Silver layer:

A Dataflow Gen2 dataflow
A notebook
A pipeline Copy activity
A pipeline stored procedure

Bronze Layer: A pipeline Copy activity

The bronze layer is used to store raw, unprocessed data. The requirements specify that no transformations should be applied before landing the data in this layer. Using a pipeline Copy activity ensures minimal development effort, built-in connectors, and the ability to ingest the data directly into the Delta format in the bronze layer.
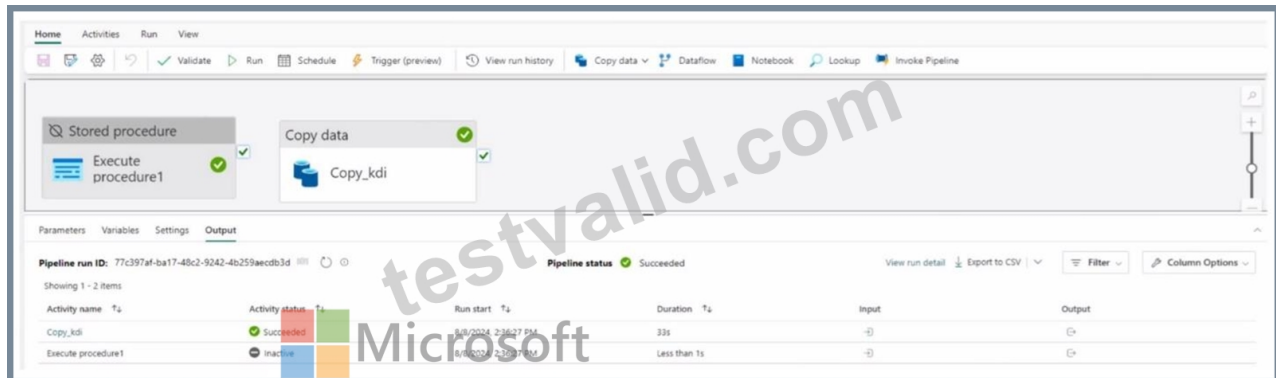

Silver Layer: A notebook

The silver layer involves extensive data cleansing (deduplication, handling missing values, and standardizing capitalization). A

notebook provides the flexibility to implement complex transformations and is well-suited for this task.

NEW QUESTION # 19
Exhibit.

You have a Fabric workspace that contains a write-intensive warehouse named DW1. DW1 stores staging tables that are used to load a dimensional model. The tables are often read once, dropped, and then recreated to process new data.
You need to minimize the load time of DW1.
What should you do?

- A. Drop statistics.
- B. Create statistics.
- C. Disable V-Order.
- D. Enable V-O-der.

Answer: A

NEW QUESTION # 20
You need to ensure that usage of the data in the Amazon S3 bucket meets the technical requirements.
What should you do?

- A. Create a workspace identity and enable high concurrency for the notebooks.
- B. Create a shortcut and ensure that caching is disabled for the workspace.
- C. Create a shortcut and ensure that caching is enabled for the workspace.
- D. Create a workspace identity and use the identity in a data pipeline.

Answer: B

Explanation:
To ensure that the usage of the data in the Amazon S3 bucket meets the technical requirements, we must address two key points:

NEW QUESTION # 21
Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.
After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.
You have a KQL database that contains two tables named Stream and Reference. Stream contains streaming data in the following format.

Column name	Data type
Timestamp	Datetime
GeoLocation	Dynamic
Temperature	Decimal
DeviceId	Int

Reference contains reference data in the following format.

Column name	Data type
DeviceId	Int
DeviceName	String

Both tables contain millions of rows.

You have the following KQL queryset.

```
01  Stream
02  | extend lat = todecimal(GeoLocation.Latitude), long = todecimal(GeoLocation.Longitude)
03  | join kind=inner Reference on DeviceId
04  | project Timestamp, lat, long, Temperature, DeviceName
05  | filter Temperature >= 10
06  | render scatterchart with (kind = map)
```

You need to reduce how long it takes to run the KQL queryset.

Solution: You change the join type to kind=outer.

Does this meet the goal?

- A. No
- B. Yes

Answer: A

Explanation:
An outer join will include unmatched rows from both tables, increasing the dataset size and processing time. It does not improve query performance.

NEW QUESTION # 22
