Sie können so einfach wie möglich - CIPM bestehen!

Die IAPP CIPM Zertifizierungsprüfung ist eine IT-Zertifizierung, die in der IT-Branche breite Anerkennung findet. Leute auf der ganzen Welt interessieren sich für die IAPP CIPM Zertifizierungsprüfung. Denn mit dieser Zertifizierung können Sie erfolgreiche Karriere machen und Erfolg erzielen. Die Schulungsunterlagen zur IAPP CIPM Zertifizierungsprüfung von PrüfungFrage ist immer vorrangiger als die der anderen Websites. Denn wir haben ein riesiges IT-Expertenteam. Sie erfolgen immer die neuesten Schulungsunterlagen zur IAPP CIPM Zertifizierungsprüfung.

Die International Association of Privacy Professionals (IAPP) bietet Fachleuten, die im Bereich Privatsphäre und Datenschutz arbeiten, verschiedene Zertifizierungen an. Zu diesen Zertifizierungen gehört die Zertifizierung von Certified Information Privacy Manager (CIPM). Die CIPM -Zertifizierung ist für Personen konzipiert, die für die Verwaltung von Datenschutzprogrammen in ihren Organisationen verantwortlich sind. Diese Zertifizierung ist ideal für Datenschutzzachleute, die ihr Wissen und ihre Fähigkeiten bei der Verwaltung von Datenschutzprogrammen verbessern möchten und für ihr Fachwissen in diesem Bereich anerkannt werden möchten.

IAPP Certified Information Privacy Manager (CIPM) CIPM Prüfungsfragen mit Lösungen (Q164-Q169):

164. Frage

SCENARIO

Please use the following to answer the next QUESTION:

Penny has recently joined Ace Space, a company that sells homeware accessories online, as its new privacy officer. The company is based in California but thanks to some great publicity from a social media influencer last year, the company has received an influx of sales from the EU and has set up a regional office in Ireland to support this expansion. To become familiar with Ace Space's

practices and assess what her privacy priorities will be, Penny has set up meetings with a number of colleagues to hear about the work that they have been doing and their compliance efforts.

Penny's colleague in Marketing is excited by the new sales and the company's plans, but is also concerned that Penny may curtail some of the growth opportunities he has planned. He tells her "I heard someone in the breakroom talking about some new privacy laws but I really don't think it affects us. We're just a small company. I mean we just sell accessories online, so what's the real risk?" He has also told her that he works with a number of small companies that help him get projects completed in a hurry. "We've got to meet our deadlines otherwise we lose money. I just sign the contracts and get Jim in finance to push through the payment. Reviewing the contracts takes time that we just don't have." In her meeting with a member of the IT team, Penny has learned that although Ace Space has taken a number of precautions to protect its website from malicious activity, it has not taken the same level of care of its physical files or internal infrastructure. Penny's colleague in IT has told her that a former employee lost an encrypted USB key with financial data on it when he left. The company nearly lost access to their customer database last year after they fell victim to a phishing attack. Penny is told by her IT colleague that the IT team

"didn't know what to do or who should do what. We hadn't been trained on it but we're a small team though, so it worked out OK in the end." Penny is concerned that these issues will compromise Ace Space's privacy and data protection.

Penny is aware that the company has solid plans to grow its international sales and will be working closely with the CEO to give the organization a data "shake up". Her mission is to cultivate a strong privacy culture within the company.

Penny has a meeting with Ace Space's CEO today and has been asked to give her first impressions and an overview of her next steps.

To help Penny and her CEO with their objectives, what would be the most helpful approach to address her IT concerns?

- A. Ensure inventory of IT assets is maintained
- B. Roll out an encryption policy
- C. Undertake a tabletop exercise
- D. Host a town hall discussion for all IT employees

Antwort: C

Begründung:

The most helpful approach to address Penny's IT concerns is to undertake a tabletop exercise. A tabletop exercise is a simulated scenario that tests the organization's ability to respond to a security incident, such as a data breach, a cyberattack, or a malware infection. A tabletop exercise typically involves:

A facilitator who guides the participants through the scenario and injects additional challenges or variables
A scenario that describes a plausible security incident based on real-world threats or past incidents
A set of objectives that define the expected outcomes and goals of the exercise
A set of questions that prompt the participants to discuss their roles, responsibilities, actions, decisions, and communications during the incident response process
A feedback mechanism that collects the participants' opinions and suggestions on how to improve the incident response plan and capabilities
A tabletop exercise can help Penny and her CEO with their objectives by:

Enhancing the awareness and skills of the IT team and other stakeholders involved in incident response
Identifying and addressing the gaps, weaknesses, and challenges in the incident response plan and process
Improving the coordination and collaboration among the IT team and other stakeholders during incident response
Evaluating and validating the effectiveness and efficiency of the incident response plan and process
Generating and implementing lessons learned and best practices for incident response

165. Frage

Under the General Data Protection Regulation (GDPR), which situation would be LEAST likely to require a Data Protection Impact Assessment (DPIA)?

- A. The use of a camera system to monitor driving behavior on highways
- B. A Human Resources department using a tool to monitor its employees' internet activity
- C. An online magazine using a mailing list to send a generic daily digest to marketing emails
- D. A health clinic processing its patients' genetic and health data

Antwort: C

Begründung:

A Data Protection Impact Assessment (DPIA) is a process to help identify and minimize the data protection risks of a project. Under the GDPR, a DPIA is required when the processing is likely to result in a high risk to the rights and freedoms of individuals, especially when using new technologies. The GDPR provides some examples of high-risk processing activities, such as systematic and extensive evaluation of personal aspects, large-scale processing of special categories of data, or systematic monitoring of public areas. The other options are more likely to require a DPIA than the online magazine using a mailing list to send a generic daily digest to marketing emails, as they involve more sensitive or intrusive types of processing. 166. Frage

Which of the following is the most likely way an independent privacy organization might work to promote sound privacy practices?

- A. By enacting new legislation.
- **B. By developing principles for self-regulation.**
- C. By issuing penalties for violations of rules.
- D. By completing on-site audits.

Antwort: B

Begründung:

Comprehensive and Detailed Explanation:

Independent privacy organizations, such as IAPP, NIST, or ISO, typically develop principles for self-regulation to guide organizations in maintaining privacy best practices.

* Self-regulation (Option A) allows industries to establish privacy frameworks and ethical guidelines that align with global privacy regulations like GDPR, CCPA, and ISO/IEC 27701.

* Enacting new legislation (Option B) is typically done by governments or regulatory bodies, not independent organizations.

* Completing on-site audits (Option C) is more often performed by regulatory authorities or internal compliance teams.

* Issuing penalties (Option D) is a function of government enforcement agencies, not independent privacy groups.

167. Frage

Which of the following is NOT recommended for effective Identity Access Management?

- A. Unique user IDs.
- **B. Demographics.**
- C. Credentials (e.g., password).
- D. User responsibility.

Antwort: B

Begründung:

Explanation

Identity and Access Management (IAM) is a process that helps organizations secure their systems and data by controlling who has access to them and what they can do with that access. Effective IAM includes a number of best practices, such as:

* Unique user IDs: Each user should have a unique ID that is used to identify them across all systems and applications.

* Credentials: Users should be required to provide authentication credentials, such as a password or biometric data, in order to access systems and data.

* User responsibility: Users should be made aware of their responsibilities when it comes to security, such as the need to keep their passwords secret and the importance of reporting suspicious activity.

Demographics refers to the statistical characteristics of a population, such as age, gender, income, etc. While demographic data may be collected and used for various purposes, it is not a recommended practice for effective IAM. Demographic data is not a reliable method of identification or authentication, and it is not used to provide access to systems and data.
