Hot C_BCBDC_2505 New Real Test | Valid C_BCBDC_2505 Accurate Prep Material: SAP Certified Associate - SAP Business Data Cloud

The ITExamDownload C_BCBDC_2505 PDF file contains the real, valid, and updated SAP C_BCBDC_2505 exam practice questions. These are the real C_BCBDC_2505 exam questions that surely will appear in the upcoming exam and by preparing with

them you can easily pass the final exam. The C_BCBDC_2505 PDF Questions file is easy to use and install. You can use the C_BCBDC_2505 PDF practice questions on your laptop, desktop, tabs, or even on your smartphone and start C_BCBDC_2505 exam preparation right now.

SAP C_BCBDC_2505 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> SAP Analytics Cloud: This section of the exam measures the skills of Data Analysts and covers the use of SAP Analytics Cloud in data visualization, story building, and dashboard creation. Candidates should be familiar with its planning and predictive capabilities, along with how to utilize data insights to drive business decision-making. It also includes managing user access and collaborating through shared analytics assets.
Topic 2	<ul style="list-style-type: none"> SAP Business Data Cloud: This section of the exam measures the skills of Data Analysts and covers core concepts of the SAP Business Data Cloud. Candidates are expected to understand its key components, integration mechanisms, and how it functions as a foundation for unified data management across SAP and non-SAP environments. The focus is on enabling data connectivity and providing governed access to data across the enterprise.
Topic 3	<ul style="list-style-type: none"> SAP Datasphere: This section of the exam measures the skills of Solution Consultants and covers a comprehensive understanding of SAP Datasphere. Candidates should demonstrate knowledge of data modeling, transformation, and harmonization using SAP Datasphere tools. It evaluates how well they can work with data layer structuring, semantic modeling, and integration to support real-time data access for various business applications.

SAP Certified Associate - SAP Business Data Cloud Sample Questions (Q73-Q78):

NEW QUESTION # 73

What features are supported by the SAP Analytics Cloud data analyzer? Note: There are 3 correct answers to this question.

- A. Input controls
- B. Calculated measures
- C. Linked dimensions
- D. Conditional formatting
- E. Charts

Answer: A,B,D

Explanation:

The SAP Analytics Cloud Data Analyzer is designed for ad-hoc data exploration and analysis, providing a focused environment for users to quickly derive insights. Among its key supported features are calculated measures, which allow users to create new metrics on the fly based on existing data, enabling deeper analysis without modifying the underlying model. Input controls are also supported, providing interactive filtering capabilities that allow users to dynamically adjust the data displayed based on specific criteria, enhancing the flexibility of their analysis. Furthermore, conditional formatting is a valuable feature that enables users to apply visual styling (e.g., colors, icons) to data points based on defined rules, making it easier to identify trends, outliers, or specific conditions at a glance. While charts and linked dimensions are integral to full stories, the Data Analyzer's strength lies in its immediate, flexible analytical capabilities for a single data source.

NEW QUESTION # 74

Which component of SAP Business Data Cloud allows for the creation of data models?

Please choose the correct answer.

Response:

- A. Data Marketplace
- B. Data Monitor
- C. Data Catalog
- D. Data Builder

Answer: D

NEW QUESTION # 75

Which features of Business Builder enhance semantic modeling?

There are 2 correct answers to this question.

Response:

- A. Define business entities
- B. Create calculated measures
- C. Assign email notifications
- D. Load CSV files directly

Answer: A,B

NEW QUESTION # 76

What are the key characteristics of SAP Datasphere?

Please select all the correct answers that apply.

Response:

- A. Deployment: Free choice between on premise or private cloud
- B. End-to-end Integration: Consumption of data from any source in SAP Analytics Cloud
- C. Elasticity: A 'pay for what you use' concept
- D. Performance: Leverage the power of SAP HANA Cloud
- E. Collaboration: Enablement of both enterprise IT users and line of business users

Answer: B,C,D,E

NEW QUESTION # 77

Which steps are executed when an SAP Business Data Cloud Intelligent Application is installed? Note: There are 2 correct answers to this question.

- A. Execution of a machine-learning algorithm
- B. Connection of SAP Datasphere with SAP Analytics Cloud
- C. Creation of a dashboard for visualization
- D. Replication of data from the business applications to Foundation Services

Answer: B,D

Explanation:

When an SAP Business Data Cloud (BDC) Intelligent Application is installed, two key foundational steps are executed to ensure its operational readiness. Firstly, there is the connection of SAP Datasphere with SAP Analytics Cloud (SAC). This establishes the vital link that allows the intelligent application's analytical models, which reside and are managed within SAP Datasphere, to be consumed and visualized in SAC. SAC serves as the front-end for analytical consumption, enabling users to interact with the insights generated by the intelligent application. Secondly, the installation process involves the replication of data from the business applications to Foundation Services. Foundation Services act as the initial landing zone for raw business data within the BDC architecture. This data replication ensures that the intelligent application has access to the necessary operational data from source systems to perform its functions, whether it involves data processing, enrichment, or feeding machine learning models. These steps are crucial for the intelligent application to ingest, process, and ultimately present valuable business insights.
