

Questions and Answers for the EAEP2201 Exam, Authentic 2026

HESI Entrance Exam With Authentic Questions and Answers 2025/2026

Body planes - Correct Answers-imaginary lines used for reference; they include the median plane, the coronal plane, and the transverse plane.

Median Plane - Correct Answers-divides the body into right and left halves. Also called the midsagittal plane.

Planes of the Body - Correct Answers-...

Coronal Plane - Correct Answers-divides the body into front and rear sections. Also called the frontal plane.

Frontal plane - Correct Answers-divides the body into front and rear sections. Also called the coronal plane.

Horizontal Plane - Correct Answers-divides the body into a superior (or upper) and an inferior (or lower) section. Also called the transverse plane.

Median Plane - Correct Answers-divides the body into right and left halves. Also called the midsagittal plane.

Midsagittal Plane - Correct Answers-divides the body into right and left halves. Also called the median plane.

Transverse Plane - Correct Answers-divides the body into a superior (or upper) and an inferior (or lower) section. Also called the horizontal plane.

Direction and Location - Correct Answers-...

Anterior - Correct Answers-front side of the body, also known as ventral.

Caudal - Correct Answers-in quadrupeds, the tail end [see inferior].

Cranial - Correct Answers-above or near the head, also known as superior.

Distal - Correct Answers-farthest end from the trunk or head.

Dorsal - Correct Answers-back side of the body, also known as the posterior.

The Esri market has become so competitive and challenging with time. To meet this challenge the professionals have to learn new in-demand skills and upgrade their knowledge. With the Esri EAEP2201 certification exam they can do this job quickly and nicely. Your exam preparation with EAEP2201 Questions is our top priority at PracticeMaterial. To do this they just enroll in Enterprise Administration Professional 2201 (EAEP2201) certification exam and show some firm commitment and dedication and prepare well to crack the EAEP2201 exam.

Esri EAEP2201 Exam evaluates the proficiency of candidates in multiple areas, including geodatabase management, server administration, web services and interfaces, and security management. These skills are essential for working with ArcGIS Enterprise systems, which allow organizations to efficiently store, manage, process, and share spatial data. These systems are particularly useful for enterprise-level applications, where large volumes of data from multiple sources must be integrated and analyzed.

New EAEP2201 Test Prep, EAEP2201 Reliable Practice Questions

The development and progress of human civilization cannot be separated from the power of knowledge. You must learn practical

knowledge to better adapt to the needs of social development. Now, our EAEP2201 learning prep can meet your requirements. You will have good command knowledge with the help of our study materials. The certificate is of great value in the job market. Our EAEP2201 learning prep can exactly match your requirements and help you pass exams and obtain certificates. As you can see, our products are very popular in the market. Time and tides wait for no people. Take your satisfied EAEP2201 Actual Test guide and start your new learning journey. After learning our learning materials, you will benefit a lot. Being brave to try new things, you will gain meaningful knowledge.

Esri Enterprise Administration Professional 2201 Sample Questions (Q50-Q55):

NEW QUESTION # 50

An administrator needs to share content with a specific group of users. The administrator is concerned that several important applications will stop working for the users if they leave the group.

Which action should the administrator perform to prevent users from leaving the group?

- A. Change the role of the users
- **B. Create an administrative group**
- C. Create a group visible only to group members

Answer: B

Explanation:

In ArcGIS Enterprise, when creating a new group, administrators have the option to designate it as an Administrative Group. This designation restricts members from leaving the group voluntarily; only the group owner or a group manager can remove members. This ensures that critical applications and content shared within the group remain accessible to all intended users, preventing disruptions caused by users inadvertently or intentionally leaving the group.

It's important to note that this setting can only be applied during the creation of a new group and cannot be modified later.

Reference Source: ArcGIS Enterprise documentation on creating administrative groups

NEW QUESTION # 51

A GIS administrator is publishing a feature service. All 2,400 features in the dataset must be able to be returned from a single request to the service.

Which action should the administrator perform?

- A. Adjust pooling to handle the request
- **B. Increase the max record count**
- C. Enable cached drawing mode
- D. Use service defaults for publishing

Answer: B

Explanation:

By default, feature services limit the number of records returned in a single request (usually set to 1,000).

To allow all 2,400 features to be returned in one call, the administrator needs to increase the "Maximum number of records returned by the server" (maxRecordCount) setting during or after publishing.

From the ArcGIS Server documentation:

"The maxRecordCount property defines the number of records returned by the server in a single request. To return all features, this value must be increased accordingly."

* Option A (adjust pooling) relates to concurrency and scalability, not data retrieval limits.

* Option C would keep the default setting of 1,000, which would not meet the requirement.

* Option D relates to visual performance, not record retrieval.

NEW QUESTION # 52

A single Linux machine deployment of ArcGIS Enterprise has a home partition of 20 GB, a /data partition of 150 GB, and an /opt partition of 75 GB.

Where should the configuration store and directories be located?

- A. /data
- B. /opt
- C. /home

Answer: A

Explanation:

The configuration store and server directories for ArcGIS Enterprise should be placed in a partition with ample disk space and stable read/write performance, as these directories store logs, cache, uploads, and critical site configuration information.

In this scenario:

- * The /home partition (20 GB) is insufficient for growth and operational overhead.
 - * The /opt partition (75 GB) is moderately sized but still smaller than the /data partition.
 - * The /data partition (150 GB) provides the most space, making it the best choice to ensure scalability and system reliability.
- Best practice from ArcGIS Enterprise documentation recommends placing server directories and configuration stores on high-capacity partitions like /data when available.

NEW QUESTION # 53

A GIS analyst creates a layer in ArcGIS Pro that must be published to the ArcGIS Enterprise portal as a web service that supports editing. The analyst does not have a connection to the ArcGIS Server where the service must be published.

What action should the analyst perform?

- A. Create a service definition file to be published by a portal administrator
- B. Change the privileges on their user role to allow publishing
- C. Upload the layer to the portal as a layer package file and add it to a web map

Answer: C

NEW QUESTION # 54

A GIS analyst is running raster analysis in the ArcGIS Enterprise portal Map Viewer. The input data is an image layer, but the output of the raster analysis is a feature layer.

Which ArcGIS Server will host the output feature service?

- A. ArcGIS Image Hosting Server site
- B. ArcGIS Raster Analytics Server site
- C. ArcGIS Hosting Server site

Answer: C

Explanation:

In ArcGIS Enterprise, when performing raster analysis that results in feature data (e.g., vector outputs), the ArcGIS Hosting Server is responsible for hosting the resulting feature services. The Raster Analytics Server processes the raster data, and the output is then stored in the ArcGIS Data Store associated with the Hosting Server, which subsequently serves the feature layer.

The Image Hosting Server is primarily used for hosting large imagery datasets and does not handle feature services. The Raster Analytics Server conducts the analysis but does not host the output services.
