

# HP HPE7-A03 Exam | Latest HPE7-A03 Exam Experience - 365 Days Free Updates of Premium HPE7-A03 Exam

P.S. Free & New HPE7-A03 dumps are available on Google Drive shared by ITexamReview: <https://drive.google.com/open?id=1NREWO-PCm-mTWqvQI3zwDNOUArEGA5N>

If you are in search for the most useful HPE7-A03 exam dumps, you are at the right place to find us! Our HPE7-A03 training materials are full of the latest exam questions and answers to handle the exact exam you are going to face. with the help of our HPE7-A03 Learning Engine, you will find to pass the exam is just like having a piece of cake. And you will definite pass your exam for our HPE7-A03 pass guide has high pass rate as 99%!

## HP HPE7-A03 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> <li>Propose the Solution: The focal point of this topic is creating the design documentation and the final design. Moreover, the topic also focuses on presenting the solution.</li> </ul>
Topic 2	<ul style="list-style-type: none"> <li>Architect the Solution: It measures your knowledge about identifying the solution options, designing high-level topologies, selecting the correct products, and determining the suitable overlay and underlay design. Additionally, the topic discusses how to verify that the design meets the original requirements.</li> </ul>
Topic 3	<ul style="list-style-type: none"> <li>Discover Requirements: This topic defines the goals and identifies the current environment and the objectives. Lastly, it also focuses on collecting information.</li> </ul>
Topic 4	<ul style="list-style-type: none"> <li>Analyze Requirements: It focuses on determining possible high-level solutions. The topic also discusses mapping the needs into technical solutions and evaluating the proposed solution against project objectives and dependencies. Moreover, it also focuses on documenting assumptions.</li> </ul>

## Premium HPE7-A03 Exam & HPE7-A03 Valid Mock Test

Three versions are available for HPE7-A03 study materials, and you can choose the most suitable one according to your own needs. HPE7-A03 PDF version is printable, and you can print them and take some notes on them if you want. HPE7-A03 Soft test engine can be used in more than 200 personal computers, and they support MS operating system. HPE7-A03 Online Test engine is convenient and easy to learn, and it supports all web browsers. You can have a general review of what you have learned. Just have a try, and there is always a version for you.

### HP Aruba Certified Campus Access Architect Exam Sample Questions (Q29-Q34):

#### NEW QUESTION # 29

Why is it important to assess the current security posture during the discovery phase?

- A. To determine the physical location of network devices
- **B. To identify vulnerabilities that need to be addressed in the new design**
- C. To evaluate the aesthetic design of the network layout
- D. To decide on the color scheme of network cables

**Answer: B**

#### NEW QUESTION # 30

A global cruise line company needs to refresh its current fleet. They will refresh the "insides" of the ship to be cost-effective and increase their sustainability. They will replace the complete WLAN/LAN hardware of the ship. In this refresh, the company will not refresh its current security requirements. The CIO also wants to limit the number of unused ports in the switches. Future expansion will always mean a refresh of hardware.

They start with the smallest ship with a maximum of 800 guests.

Each ship has a LAN infrastructure consisting of two core switches, up to 10 redundant distribution switches, and up to 500 access switches (400 cabins, 100 technical rooms). The core switches are located in the MDF of the ship and the distribution switches are located in the IDFs of the ship. Each cabin and technical room gets one single access switch.

The cabling structure of the ship will not be refreshed. Each IDF is connected to the MDF by SMF, of which two pairs are available for the interconnect between the core and distribution. The length of SM fiber between MDF and IDF is less than 300 meters (980 ft), type used is OS1. Each cabin is connected by a single OM2 pair to the IDF, the maximum length is 60 meters (200 ft). Each technical room is connected by a single OM2 pair to the IDF, with lengths between 100 and 150 meters (320 and 500 ft).

For each cabin/technical room the customer is looking to replace their current fan-less 2530/2540 without changing the requirements, except they need to upgrade the uplink to distribution switch to 10 GbE to handle the increased network traffic, and the technical rooms need redundant power.

The WLAN infrastructure will be 1:1 refreshed without new cabling or new AP locations. Their WLAN infrastructure is based on the 200/300 series indoor and outdoor APs running InstantOS (less than 300 APs).

The customer has no change in WLAN requirements.

The cruise line company will replace its current Internet connection before the LAN/WLAN refresh. The new Internet connection will provide a 99.8% uptime, which is needed to ensure the paid guest Wi-Fi is always operational. With this new Internet connection, the CIO of the cruise line wants to base the design on the ESP architecture from Aruba because Internet connection is guaranteed.

The week after the presentation of your design to the CIO of the cruise line company, the CIO calls you to discuss increasing the security on the wired network infrastructure. Since one of their competitors had one of their cruise ships cyber hacked, the CSO of the cruise line has mandated increased security on the wired network. They have heard about dynamic segmentation and central and decentral overlay networks. For their POS systems, they need a low-latency connection between the POS system and the POS server in the onboard data center.

What solution fits the customer's requirements?

- A. Standardize on 6300 switches for the edge, 8320 for the RR, 8360 for the stub/border, 9240 for the WLAN Gateway, and utilize Aruba Central NetConductor.
- B. Standardize on 6300 switches for the edge, 8325 for the RR, 8360 for the stub/border, and utilize Aruba Central NetConductor.
- C. Standardize on 6200 switches for the edge, 8325 for the RR, 8360 for the stub/border, and utilize Aruba Central

NetConductor.

- D. Standardize on 6300 switches for the edge, 8320 for the RR, 8360 for the stub/border, and utilize Aruba Central NetConductor.
- E. Standardize on 6300 switches for the edge, 8325 for the RR, 8360 for the stub/border, 9240 for the WLAN Gateway, and utilize Aruba Central NetConductor.

**Answer: E**

Explanation:

- \* Requirements Recap:
  - \* Dynamic segmentation # Needed for role-based access across wired/wireless.
  - \* Overlay fabric (EVPN-VXLAN) # For scalable and secure segmentation.
  - \* Low-latency POS connectivity # Needs local enforcement and efficient routing inside the fabric.
  - \* Secure tunneling for WLAN traffic # Requires WLAN Gateway functionality.
  - \* Limit unused ports # Use right-sized edge switches.
- \* Role of Devices:
  - \* Edge: Aruba CX 6300
    - \* Best practice for access edge with 10 Gb uplinks, PoE, and ESP fabric compatibility.
  - \* Route Reflector (RR): Aruba CX 8325
    - \* Optimized for control-plane scaling in EVPN fabrics, better fit than the 8320 for RR role.
  - \* Stub/Border: Aruba CX 8360
    - \* Acts as aggregation and border node in ESP campus fabric.
  - \* WLAN Gateway: Aruba 9240
    - \* Terminates wireless tunnels, enforces role-based policies, integrates with ClearPass and NetConductor.
- \* Aruba Central NetConductor
  - \* Provides cloud-based orchestration, dynamic segmentation, and policy automation across fabric.
- \* Why Option A is Correct:
  - \* Includes 6300 at edge, 8325 for RR, 8360 for stub/border, 9240 for WLAN Gateway, and NetConductor.
  - \* Fully supports dynamic segmentation, fabric overlay, and WLAN tunneling while meeting latency and security requirements.
- \* Why Not the Others:
  - \* B (8320 as RR): 8320 is less capable for modern RR roles compared to 8325.
  - \* C (6200 edge): 6200 cannot provide 10 Gb uplinks required by cabins/technical rooms.
  - \* D (8320 RR, no WLAN gateway): Missing WLAN gateway, so cannot support tunneled WLAN traffic.
  - \* E (no WLAN gateway): Also lacks WLAN gateway; requirement not met.

**NEW QUESTION # 31**

Drag and Drop Question

What documents should be included in the solution proposal? (Place the correct items into the list at the right. Order is not important. Not all options will be used)

POSSIBLE OPTIONS	CORRECT OPTIONS
architect's notes from meetings	
as-built rack drawings	
assumptions documented in design	
bill of materials	
data sheets of equipment proposed	
proposed topology diagram	
quote	

**Answer:**

Explanation:

POSSIBLE OPTIONS	CORRECT OPTIONS
	architect's notes from meetings
	as-built rack drawings
	assumptions documented in design
	bill of materials
	data sheets of equipment proposed
	proposed topology diagram
	quote

### NEW QUESTION # 32

ACME retail has 38 locations spread out across five US states and two provinces in Canada.

They are looking to grow 20% over the next two years. They have an HQ with a staff of 200 employees. The organization has eight Regional Managers and two VPs who work from home and the road. Stores typically have 17 employees on average per location. The two warehouses have a remote loading system and 20 employees each to load the trucks and fulfill the online orders. The warehouse has 40-foot ceilings and large metal racks to store inventory. The main location is 240K sq ft (22300 sq m) and the Canadian warehouse is 130K sq ft (12100 sq m). The forklifts on the loading docks are equipped with a wireless tablet on board. A typical store is reportedly about 60,000 sq ft (5575 sq m) and smaller stores are planned at 25,000 sq ft (2320 sq m). The locations need to expand the abilities to vendors that need to add setup displays or interactive kiosks in the stores. The current infrastructure was installed in 2015 and used wireless N technology in a coverage model. The wiring is Cat5, and they are unsure of the fiber connections. The inventory is all placed on the floor when it is delivered to the local store. Inventory control is handled through Zebra barcode scanners, and they have had a lot of issues in getting signals throughout the stores and this makes monthly inventory difficult. The organization has a small help desk to troubleshoot issues that happen at the retail locations and PC support for the office. The company is looking to upgrade away from the current PBX system later this year. With the need to grow and cut costs, they are interested in moving the data to the cloud but need to get almost real-time inventory control for the online service to function.

The network has all been wired over the last ten years, but with the new systems being all wireless, they have seen the trend to offer wireless to all the vendors for their needs but also would be to allow employees, guests, and contractors all to use it. With the new IT director starting next week, the project has been set by the CTO of the company. The marketing group has asked how they can interact with the customers and get more info, while the IT support desk needs to cut staff in half.

The office has an MDF and two IDFs located on floors one and two. The MDF is in the basement, and you have multiple WAN circuits for the HQ links. Each store has a local handoff from the cable company (ethernet) in the middle of the store in the office, so distance for the wiring is not an issue.

The customer has budget concerns but does want something that could last 7+ years.

What should the architect be concerned about regarding the solution? (Choose two.)

- A. Regulatory Domains
- B. Active Directory
- C. multiple locations
- D. IP addresses

**Answer: A,C**

Explanation:

In designing a network solution for ACME Retail, which operates across various regions in the US and Canada, the architect must consider Regulatory Domains and the challenges posed by multiple locations. Regulatory Domains are crucial because wireless standards and allowed frequencies vary by country, affecting how WLAN equipment is configured and deployed.

Compliance with local regulations is essential to avoid legal issues and ensure optimal network performance. The challenge of multiple locations involves ensuring consistent, high-quality network service across all sites, despite geographical distances and site-specific characteristics.

This requires a scalable, flexible network architecture that can be centrally managed while accommodating the unique needs of each location.

### NEW QUESTION # 33

A large multinational financial institution has contracted you to design a new full-stack wired and wireless network for their new 6-story regional office building. The bottom two floors of this facility will be retail space for a large banking branch. The upper floors will be carpeted office space for corporate users, each floor being approximately 100,000 sq ft (9290 sqm). Data centers are all off site and will be out of scope for this project. The customer is underserved by its existing L2-based network infrastructure and would like to take advantage of modern best practices in the new design. The network should be fully resilient and fault-tolerant, with dynamic segmentation at the edge.

The retail space will include public guest Wi-Fi access. Retail associates will have corporate tablets for customer service, and there will be a mix of wired and wireless devices throughout the retail floors. The corporate users will primarily use wireless for connectivity, but several wired clients, printers, and hard VoIP phones will be in use.

The customer is also planning on renovating the corporate office space in order to take advantage of 'smart office' technology. These improvements will drive blue-dot wayfinding, presence analytics, and other location-based services. The client has provided floorplans, wall density, and ceiling heights for the wireless deployment in the carpeted office space. What else will be needed to write an accurate bill of material? (Select two)

- A. flooring information
- B. sprinkler details

- C. ceiling construction details
- D. PoE port details

**Answer: C,D**

Explanation:

Ceiling construction details are essential for a wireless deployment because the material and structure of the ceiling can affect the propagation of wireless signals. Different materials can absorb or reflect RF signals differently, impacting coverage and signal strength. Understanding ceiling construction helps in planning the placement of access points for optimal coverage and performance. PoE (Power over Ethernet) port details are necessary to ensure that the wired network infrastructure can provide power to the access points and other PoE-enabled devices like VoIP phones and cameras. This information is critical for planning the power budget and ensuring that the network can support the power requirements of all connected devices, ensuring a stable and reliable network infrastructure.

## NEW QUESTION # 34

.....

By doing this the successful HPE7-A03 candidates can gain several personal and professional benefits in their career and achieve their professional career objectives in a short time period. To attain this you just need to enroll in the HP HPE7-A03 Certification Exam and put all your efforts to pass this challenging HPE7-A03 exam with good scores.
