Exam UiAAAv1 Demo, UiAAAv1 Cheap Dumps

Our company has taken a lot of measures to ensure the quality of our UiAAAv1 preparation materials. It is really difficult for us to hire a professional team, regularly investigate market conditions, and constantly update our UiAAAv1 exam questions. But we persisted for so many years. And our quality of our UiAAAv1 study braindumps are praised by all of our worthy customers. And you can always get the most updated and latest UiAAAv1 training guide if you buy them.

UiPath Agentic Automation Associate Sample Questions (Q22-Q27):

NEW QUESTION # 22

Scenario: A Citrix Administrator created a machine catalog using Machine Creation Services. The Desktop Experience was set to 'Random'.

Where will the unique information for the virtual machines be stored?

- **A. In the identity disk of each virtual machine**
- B. In the PERSONALITY.INI file at the root directory of each virtual machine
- C. Only in the Site database
- D. In the differencing disk of each virtual machine

Answer: A

NEW QUESTION # 23

Scenario: A Citrix Administrator configures the 'Auto connect client drives' user settings to map client drives within the HDX session for all published desktops. The setting is configured in a Baseline Group Policy Object (GPO) and linked to an Organizational Unit (OU) that contains all of the published desktops. When a user launches the desktop, client drives are NOT mapped. What is a possible reason?

- **A. Loopback processing is NOT enabled.**
- B. Desktops need to be restarted for the policy to be applied.
- C. gpupdate /force needs to be executed on all of the machines.
- D. The GPO needs to be linked to the User OU.

Answer: A

Explanation:

User settings in a GPO linked to a machine OU only apply if loopback processing is enabled.

Since the "Auto connect client drives" setting is a user policy but applied at the desktop OU level, loopback processing must be enabled for the policy to take effect within the HDX sessions.

NEW QUESTION # 24

Which machine catalog supports the deployment of image updates using Citrix Studio?

- **A. Machine Creation Services**
- B. Manual provisioning
- C. Remote PC Access
- D. Citrix Provisioning

Answer: A

Explanation:

Machine Creation Services (MCS) integrates with Citrix Studio to manage and deploy image updates. When the master image is updated, MCS can roll out those changes to all machines in the catalog, making it the catalog type that supports image updates directly from Studio.

NEW QUESTION # 25

After creating a new machine catalog, a Citrix Administrator notices that the Virtual Delivery Agent (VDA) machines fail to register. What could the administrator have done to cause this condition?

- A. Failed to take a VM snapshot prior to creating the catalog
- **B. Selected an incompatible VDA functional level in Citrix Studio**
- C. Failed to run the Citrix Health Assistant
- D. Selected an invalid VM naming scheme in Citrix Studio

Answer: B

Explanation:

If an incompatible VDA functional level is selected when creating the machine catalog, the VDA machines cannot register with the
