### UiPath (ADPv1) Automation Developer Professional Sample Questions (Q14-Q19):

#### NEW QUESTION # 14

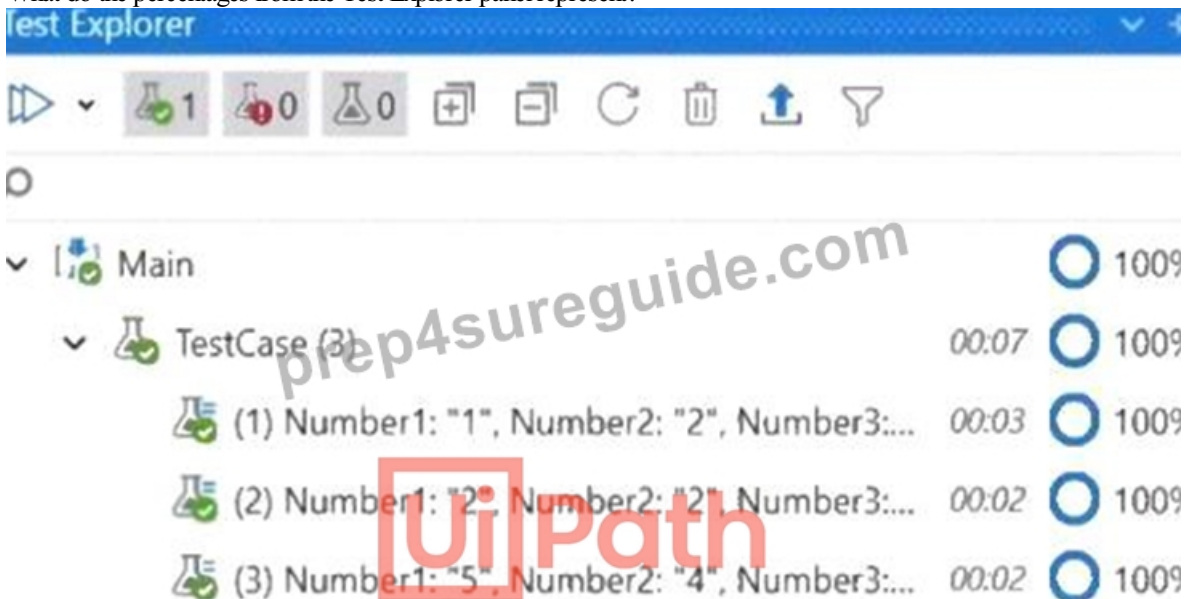

What are the primary functions of the UiPath Integration Service?

- A. Enables automation with a library of connectors, manages connections easily with standardized authentication, kicks off automations with server-side triggers or events, provides curated activities and events, simplifies automation design.
- B. Automates UI design, manages API connections, provides limited activities and events, simplifies automation design.
- C. Enables automation with UI components, manages API keys, kicks off automations with client-side triggers, provides curated events.
- D. Enables automation with API integration, manages connections with user-provided authentication, kicks off automations based on application-specific triggers, simplifies automation design with the help of third-party libraries.

Answer: A

#### NEW QUESTION # 15

What do the percentages from the Test Explorer panel represent?

- A. Percent of test data run.
- B. Coverage percent.
- C. Correctness of the code percent.
- D. Passing percent.

Answer: D

Explanation:

The percentages from the Test Explorer panel represent the passing percent of the test cases that are executed.

The Test Explorer panel shows the status of each test case, the total number of test cases, the number of passed test cases, the number of failed test cases, and the passing percent. The passing percent is calculated by dividing the number of passed test cases by the total number of test cases and multiplying by 100. For example, if there are 10 test cases and 8 of them pass, the passing percent is 80%. References: Test Explorer

### NEW QUESTION # 16

Which of the following describes the correct hierarchy of the elements in the Object Repository tree structure?

- A. Screen, Application, Version, UI Element.
- **B. Application, Screen, UI Element, Version.**
- C. Version, Application, Screen, UI Element.
- D. Application, Version, Screen, UI Element.

**Answer: B**

### NEW QUESTION # 17

A developer is building a process that types data into input fields using the Hardware Events input method.

Which property of the Type Into activity should be modified to reduce the pace at which the input string characters are typed into the fields?

- A. Alter disabled element
- B. Delay after
- C. Delay before
- **D. Delay between keys**

**Answer: D**

Explanation:

To reduce the pace at which the input string characters are typed into the fields using the Hardware Events input method, the developer should modify the Delay between keys property of the Type Into activity. This property specifies the delay time (in milliseconds) between two keystrokes. The default value is 10 milliseconds. The maximum value is 1000 milliseconds. By increasing the value of this property, the developer can slow down the typing speed and avoid any errors or missed characters. For example, if the developer sets the Delay between keys property to 100 milliseconds, the activity will wait for 0.1 seconds before typing each character of the input string. ### NEW QUESTION # 18

The "arrayOfPointsGainedByParticipant" Object array is created and initialized with the following values:

{"7", "4", "1"}. Which is the value and data type returned, at runtime, by arrayOfPointsGainedByParticipant(1)?

- A. Value: 4  
Data Type: Object
- **B. Value: 4  
Data Type: String**
- C. Value: 7  
Data Type: Object
- D. Value: 7 Data Type String

**Answer: B**

Explanation:

Given the array "arrayOfPointsGainedByParticipant" with values {"7", "4", "1"}, at runtime, 'arrayOfPointsGainedByParticipant(1)' would return the value '4' with the data type 'String'. Arrays in .NET, which UiPath uses, are zero-indexed.
