

Mule-Dev-202 Reliable Exam Answers - Mule-Dev-202 Test Certification Cost

P.S. Free & New Mule-Dev-202 dumps are available on Google Drive shared by Pass4sures: https://drive.google.com/open?id=1hs_vO7MfGSJwtrorYvKCcgh5Cy-Nt_C

Because of the different habits and personal devices, requirements for the version of our Mule-Dev-202 exam questions vary from person to person. To address this issue, our Mule-Dev-202 actual exam offers three different versions for users to choose from. The PC version is the closest to the real test environment, which is an excellent choice for windows - equipped computers. And this version also helps establish the confidence of the candidates when they attend the Mule-Dev-202 Exam after practicing.

You may think choosing Mule-Dev-202 practice materials at the first time is a little bit like taking gambles. However, you can be assured by our Mule-Dev-202 learning quiz with free demos to take reference, and professional elites as your backup. They are a bunch of censorious elites who do not compromise on any errors happened on our Mule-Dev-202 Training Materials. So their accuracy rate is unbelievably high and helped over 98 percent of exam candidates pass the Mule-Dev-202 exam.

2026 Reliable Mule-Dev-202 Reliable Exam Answers | Salesforce Certified MuleSoft Hyperautomation Developer 100% Free Test Certification Cost

We have accommodating group offering help 24/7. It is our responsibility to aid you through those challenges ahead of you. So instead of focusing on the high quality Mule-Dev-202 latest material only, our staff is genial and patient to your questions of our Mule-Dev-202 real questions. It is our obligation to offer help for your trust and preference. Besides, you can have an experimental look of demos and get more information of Mule-Dev-202 Real Questions. The customer-service staff will be with you all the time to smooth your acquaintance of our Mule-Dev-202 latest material.

Salesforce Certified MuleSoft Hyperautomation Developer Sample Questions (Q48-Q53):

NEW QUESTION # 48

AnyAirlines has MuleSoft Composer installed on their production Salesforce environment.

To test flows with data in multiple non-production environments, what does the hyperautomation specialist need to do?

- A. Use mocked data because non-production data is not available to MuleSoft Composer.
- B. Install MuleSoft Composer in each of the non-production Salesforce environments.
- **C. Create a connection to each of the non-production environments within the Composer UI.**
- D. Install MuleSoft Composer in only one non-production Salesforce environment and create a proxy to all other non-production environments.

Answer: C

Explanation:

Create Connections: To test flows with data in multiple non-production environments, creating connections to each environment within the MuleSoft Composer UI is necessary. This allows the Composer to access and manipulate data across different environments, ensuring comprehensive testing.

Reference: MuleSoft Composer Connections

Installing Composer in Non-Production Environments: While installing Composer in each environment is technically possible, creating individual connections is more efficient and aligns with best practices.

Reference: Composer Setup and Configuration

Using Mocked Data: Mocked data can be useful for initial testing, but connecting to actual non-production environments provides more realistic test scenarios.

Reference: Testing with Mock Data

Proxy Setup: Creating a proxy to other environments is complex and unnecessary when Composer supports direct connections.

Reference: Proxy Configuration

NEW QUESTION # 49

A non-technical employee from AnyAirlines creates a hyperautomation solution. The solution needs to meet the following criteria: The process needs to begin when a record is created in Salesforce.

Then, it needs to pass data to a pre-existing RPA process which includes a User Task for data integrity purposes.

The output of the RPA process needs to be used to create a record in NetSuite.

According to best practices, how should this automated process be structured?

- A. 1. A MuleSoft Composer flow triggers on the creation of the record and calls the RPA process. 2. Then, a second MuleSoft Composer flow triggers when the RPA process is completed and creates a record in NetSuite.
- B. 1. A Salesforce flow triggers on the creation of the record and makes an outbound request to a MuleSoft Composer flow. 2. Then, the same MuleSoft Composer flow calls the RPA process and uses the result to create a record in NetSuite.
- **C. 1. A MuleSoft Composer flow triggers on the creation of the record and calls the RPA process. 2. Then, the same flow uses the response to create a record in NetSuite. B 1. A Salesforce flow triggers on the creation of the record and calls too RPA process. 2. Then, the same flow uses the response to create a record in NetSuite.**

Answer: C

Explanation:

To structure the automated process to meet the given criteria, the following approach is recommended:

MuleSoft Composer Flow Triggers on Record Creation:

Use MuleSoft Composer to create a flow that is triggered when a new record is created in Salesforce. This is done by setting up a trigger event in MuleSoft Composer that listens for new record creation events in Salesforce.

Call the RPA Process:

Once the flow is triggered, it should call the pre-existing RPA process. MuleSoft Composer can invoke MuleSoft RPA bots, and you can pass the necessary data from the Salesforce record to the RPA process.

The RPA process will include the User Task for data integrity purposes.

Use the RPA Process Output to Create a Record in NetSuite:

After the RPA process completes, the MuleSoft Composer flow can capture the output from the RPA process.

The same MuleSoft Composer flow will then use this output to create a record in NetSuite, ensuring a seamless data transfer and process automation.

NEW QUESTION # 50

An RPA process is invoked by a MuleSoft Composer flow. The RPA process has a User Task that can take up to 24 hours to complete.

- **A. Create a second MuleSoft Composer flow that starts when the RPA process is complete.**
- B. Wait for the RPA process to complete and use the results in the same MuleSoft Composer flow.
- C. Wait for the RPA process to complete and invoke a second MuleSoft Composer flow via REST API.
- D. Using best practices, how should the results be consumed by MuleSoft Composer?
- E. Create a second MuleSoft Composer flow that runs on a schedule and checks if the RPA process is complete.

Answer: A

Explanation:

When an RPA process involves a User Task that can take a significant amount of time (up to 24 hours) to complete, it is best to use a follow-up mechanism to handle the results once the process is finished:

Second MuleSoft Composer Flow:

Create a second MuleSoft Composer flow that is triggered when the RPA process completes. This ensures that the first flow is not held up while waiting for the long-running RPA process to finish.

The second flow can start based on an event, such as the completion status of the RPA process, ensuring timely and efficient processing of the results.

Trigger Mechanism:

Configure the RPA process to notify MuleSoft Composer when it is complete, possibly using a REST API or another integration method.

Best Practices:

This approach adheres to best practices by keeping flows modular and focused on specific tasks, making them easier to manage and troubleshoot.

NEW QUESTION # 51

The MuleSoft team at Northern Trail Outfitters wants to create a project skeleton that developers can use as a starting point when creating API implementations with Anypoint Studio. This will help drive consistent use of best practices within the team. Which type of Anypoint Exchange artifact should be added to Exchange to publish the project skeleton?

- **A. A MuleSoft application template with key components**
- B. A custom asset with the default API implementation
- C. RAML trail definitions to be reused across API implementations
- D. An example of an API implementation following best practices

Answer: A

Explanation:

To create a project skeleton that developers can use as a starting point for API implementations with Anypoint Studio, the best approach is to use a MuleSoft application template:

MuleSoft Application Template:

A MuleSoft application template includes key components and configurations that follow best practices. It provides a consistent starting point for new projects, ensuring that all developers adhere to the same standards.

Benefits:

Using a template helps enforce best practices, reduces the setup time for new projects, and ensures consistency across different implementations.

Publishing to Anypoint Exchange:

Once the template is created, it can be published to Anypoint Exchange where it is accessible to the entire development team. Developers can then use this template to kickstart their API projects, ensuring a uniform approach across the organization.

Anypoint Exchange Templates Documentation

NEW QUESTION # 52

Which Connected App scope should be used to connect RPA Manager with an Anypoint Platform account?

- A. RPA Integrator
- B. Exchange Administrator
- C. API Catalog Contributor
- D. Application Creator

Answer: A

Explanation:

To connect RPA Manager with an AnyPoint Platform account, the appropriate Connected App scope is RPA Integrator:

RPA Integrator Scope:

The RPA Integrator scope is designed to provide the necessary permissions for integrating RPA Manager with AnyPoint Platform. This scope allows the connected app to interact with the RPA Manager and manage RPA processes.

Connected App Configuration:

When setting up a connected app in AnyPoint Platform, select the RPA Integrator scope to ensure that the integration can access and manage the RPA processes as required.
