Exam C_S4CPB_2508 Score, Valid C_S4CPB_2508 Test Pass4sure

One of the most effective strategies to prepare for the SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition (C_S4CPB_2508) exam successfully is to prepare with actual SAP C_S4CPB_2508 exam questions. It would be difficult for the candidates to pass the C_S4CPB_2508 exam on the first try if the C_S4CPB_2508 study materials they use are not updated. Studying with invalid C_S4CPB_2508 practice material results in a waste of time and money. Therefore, updated SAP C_S4CPB_2508 practice questions are essential for the preparation of the C_S4CPB_2508 exam.

SAP Certified Associate - Implementation Consultant - SAP S/4HANA Cloud Public Edition Sample Questions (Q57-Q62):

NEW QUESTION # 57

When do you specify the data retention period in the SAP S/4HANA Migration Cockpit?

- A. When the project status is "Not Started"
- B. When the project status in "In Progress"
- C. When the project status is "Finished"
- D. When the project status is "Completed"

Answer: C

Explanation:

You specify the data retention period in the SAP S/4HANA Migration Cockpit when the project status is "Finished". The data retention period is the length of time (in days) that the project and all associated data is kept in the system after you have set the status of the project to Finished. To do this, set the option Data Retention Period to On. The data will be deleted from the SAP S/4HANA system when the data retention time expires. If you set the option Data Retention Period to Off, then the project and all associated data will be kept in the system indefinitely. You can also change the retention time for finished projects on the Technical Information tab of the project settings. References = The Migration Project Screen, Migrating Data to the SAP S/4HANA System

NEW QUESTION # 58

Which tools does SAP provide to make it easier for customers to maintain their SAP S/4HANA Cloud systems after a release upgrade? Note: There are 2 correct answers to this question.

- A. Release Assessment and Scope Dependency Tool
- B. What's New Viewer Tool
- C. SAP Signavio Process Navigator Tool
- D. Test Automation Tool

Answer: C,D

NEW QUESTION # 59

You are using the Test Automation Tool. When do you define a data variant?

- A. After providing consent for Post-Upgrade Testing.
- B. After binding a process step field to a Test Data Container.
- C. After customizing a test process.
- D. After creating a test plan.

Answer: C

Explanation:

A data variant is a set of data values that can be used to execute a test process in the Test Automation Tool.

You can define multiple data variants for a test process to test different scenarios with different input data. You can also use data variants to parameterize your test process and reuse it for different test cases¹.

You define a data variant after binding a process step field to a Test Data Container. A Test Data Container is a reusable object that stores test data for a specific field or parameter. You can create and manage Test Data Containers in the Manage Test Data app.

You can bind a process step field to a Test Data Container by selecting the field in the Test Automation Tool and choosing the Test Data Container from the list. This will create a link between the field and the Test Data Container, allowing you to use the data stored in the Test Data Container for the field².

After binding a process step field to a Test Data Container, you can define a data variant by selecting the Test Data Container and choosing the Data Variant option. This will open a dialog where you can enter the data values for the data variant. You can also specify a name and a description for the data variant. You can create as many data variants as you need for a Test Data Container². Therefore, the correct answer is B, as you define a data variant after binding a process step field to a Test Data Container.

References = 1 Test Automation Tool - SAP Help Portal 2 Test Data Containers - SAP Help Portal In the context of using the Test Automation Tool within SAP S/4HANA Cloud Public Edition, defining a data variant is a crucial step. This step occurs:

* After binding a process step field to a Test Data Container: A Test Data Container (TDC) is used to store data that can be reused across multiple test cases. When a field in a process step is bound to a TDC, it means that the test case will use the data specified within the TDC. After this binding, a data variant can be defined to specify different sets of data or conditions under which the test case should be executed. This allows for more flexible and comprehensive testing scenarios, ensuring that the application behaves as expected under various conditions.

NEW QUESTION # 60

Which of the following are captured in a completed Digital Discovery Assessment? Note: There are 2 correct answers to this question.

- A. Business role permission requirements
- B. SAP Fiori application extensions
- C. Known integration requirements
- D. Target customer go-live date

Answer: A,C

NEW QUESTION # 61

How can you define the relationship between business roles and business catalogs?

- A. A business role is a collection of one or more business catalogs.
- B. A business catalog is a collection of one or more business roles.
- C. A business role restricts access to one or more business catalogs.
- D. A business catalog restricts access to one or more business roles.

Answer: A

Explanation:

A business role is assigned to a business user to provide access to business tasks. A business role can contain one or more business catalogs, which are predefined by SAP and contain the actual authorizations that allow users to access the apps contained in the catalog. Each business catalog bundles authorizations for a specific business area. You can tailor the access according to the needs of the business and for compliance purposes using restrictions.
