

# Desktop GIAC GICSP practise exam software - Pass Certification Exam Confidently

Dumpkiller made an absolute gem of study material which carries actual GIAC GICSP Exam Questions for the students so that they don't get confused in order to prepare for GIAC GICSP exam and pass it with a good score. The GIAC GICSP practice test questions are made by examination after consulting with a lot of professionals and receiving positive feedback from them. The Global Industrial Cyber Security Professional (GICSP) (GICSP) practice test questions prep material has actual GIAC GICSP exam questions for our customers so they don't face any hurdles while preparing for GIAC GICSP certification exam.

Real GIAC GICSP Exam Questions certification makes you more dedicated and professional as it will provide you complete information required to work within a professional working environment. We have received testimonials from thousands of people who have accomplished Global Industrial Cyber Security Professional (GICSP) (GICSP) only because of the legitimate and trustworthy GICSP exam dumps. It's not simple to achieve Global Industrial Cyber Security Professional (GICSP) (GICSP) exam certification.

## GICSP Test Online, Latest GICSP Study Plan

Thus, it leads to making your practice quite convenient. GIAC GICSP desktop software functions on Windows-based computers and works without a functional internet connection. GIAC GICSP Exam Questions always provide ease to their consumers. therefore, the committed team is present around the clock to fix any problem.

## GIAC Global Industrial Cyber Security Professional (GICSP) Sample Questions (Q63-Q68):

### NEW QUESTION # 63

Which of the following is a containment task within the six step incident handling process?

- A. Validate fix using a vulnerability scan of the hosts within the DMZ
- B. Checking to ensure that the most recent patches were deployed to a web application server
- C. Re-imaging a workstation that was exhibiting worm-like behaviour
- D. Creating a forensic image of a compromised workstation

**Answer: C**

Explanation:

Containment in incident handling involves limiting the damage caused by an incident and preventing its spread.

Re-imaging a compromised workstation (C) is a direct containment action to remove malicious software and restore system integrity.

(A) Patch verification and (D) validation scans are part of recovery or prevention phases.

(B) Creating forensic images is an evidence preservation task, not containment.

The GICSP incident handling process emphasizes containment as an immediate action to stabilize the environment before eradication and recovery.

GICSP Official Study Guide, Domain: ICS Security Operations & Incident Response NIST SP 800-61 Rev 2 (Computer Security Incident Handling Guide) GICSP Training on Incident Handling Lifecycle

#### NEW QUESTION # 64

What is a characteristic of Windows Server Update Services (WSUS) in an ICS environment?

- A. Allows the administrator to create custom groups of computers
- B. Requires the clients to connect to the Internet to download patches
- C. Inventories both hardware and software within an Active Directory domain

**Answer: A**

Explanation:

WSUS enables centralized patch management and allows administrators to create custom groups of computers (C) to target updates and schedules appropriately, which is useful in segmented ICS environments.

WSUS clients do not require direct Internet access (A) as WSUS servers can download updates centrally.

WSUS does not perform hardware or software inventory (B); that functionality is provided by other tools like MECM.

GICSP highlights WSUS as a practical tool for managing patches in ICS with fine-grained control.

#### NEW QUESTION # 65

Which of the following types of network devices sends traffic only to the intended recipient node?

- A. Wireless access point
- B. Ethernet hub
- C. Wireless bridge
- D. Ethernet switch

**Answer: D**

Explanation:

An Ethernet switch (D) is a network device that learns the MAC addresses of connected devices and forwards packets only to the port associated with the destination node, reducing unnecessary traffic and improving security and efficiency.

An Ethernet hub (A) broadcasts incoming packets to all ports, not selectively.

A wireless access point (B) broadcasts signals to multiple wireless clients within range.

A wireless bridge (C) connects two network segments wirelessly but forwards traffic according to device types, not necessarily selectively to single nodes.

GICSP's ICS network segmentation and architecture domain underline the use of switches to limit broadcast traffic and reduce attack surfaces.

GICSP Training on Network Devices and Traffic Management

#### NEW QUESTION # 66

An organization has their ICS operations and networking equipment installed in the Purdue model level 3.

Where should the SIEM for this equipment be placed in relation to the existing Level 3 devices?

- A. On a different subnet in Level 3
- B. On a management subnet in Level 2
- C. On a management subnet in Level 4
- D. On the same subnet in Level 3

**Answer: C**

Explanation:

According to the Purdue model and best practices outlined in GICSP, Level 4 corresponds to the enterprise or business network, often containing management and security monitoring infrastructure such as Security Information and Event Management (SIEM) systems.

Placing the SIEM on a management subnet in Level 4 (B) keeps monitoring tools separated from the operational control network (Level 3), reducing the risk that a compromised Level 3 device could affect the security infrastructure itself. It also allows the SIEM to collect logs from multiple network segments securely and apply enterprise-wide analysis.

This segregation supports defense-in-depth and aligns with GICSP's emphasis on secure network segmentation and monitoring.

### NEW QUESTION # 67

Which type of process is described below?

The Station A stamping machine receives 250 Kg of rolled stock from Roller Station B, which it stamps into bearings.

- A. Continuous
- B. Batch
- C. Distributed
- **D. Discrete**

**Answer: D**

Explanation:

The process described involves transforming raw rolled stock into discrete products-bearings-by stamping them at Station A.

This is characteristic of a discrete process (D), where distinct, countable items are produced (bearings), typically involving individual units or assemblies.

Batch processes (C) involve processing material in defined lots or batches, but the emphasis here is on individual item production.

Continuous processes (B) run nonstop with materials continuously flowing, common in chemical plants but not in stamping.

Distributed (A) refers to control architecture rather than process type.

GICSP defines discrete manufacturing processes as producing distinct items, requiring specific cybersecurity considerations around control logic and equipment.

### NEW QUESTION # 68

.....

With our customizable learning experience and self-assessment features of practice exam software for GICSP exam, you will be able to know your strengths and areas of improvement. We provide authentic braindumps for GICSP certification exam. In fact, we guarantee that you will pass the GICSP Certification Exam on your very first try. If we fail to deliver this promise, we will give your money back! Aside from providing you with the most reliable dumps for GICSP, we also offer our friendly customer support staff. They will be with you every step of the way.
