Free PDF Quiz 2026 Reliable Plat-Dev-301: Download Salesforce Certified Platform Developer II - Multiple Choice Free Dumps

There is a succession of anecdotes, and there are specialized courses. Experts call them experts, and they must have their advantages. They are professionals in every particular field. The Plat-Dev-301 test material, in order to enhance the scientific nature of the learning platform, specifically hired a large number of qualification exam experts, composed of product high IQ team, these experts by combining his many years teaching experience of Plat-Dev-301 quiz guide and research achievements in the field of the test, to exam the popularization was very complicated content of Salesforce Certified Platform Developer II - Multiple Choice exam dumps, better meet the needs of users of various kinds of cultural level. Expert team not only provides the high quality for the Plat-Dev-301 Quiz guide consulting, also help users solve problems at the same time, leak fill a vacancy, and finally to deepen the user's impression, to solve the problem of Plat-Dev-301 test material and no longer make the same mistake.

Salesforce Certified Platform Developer II - Multiple Choice Sample

Questions (Q86-Q91):

NEW QUESTION # 86

A developer is asked to replace the standard Case creation screen with a custom screen that takes users through a wizard before creating the Case. The org only has users running Lightning Experience.

What should the developer override the Case New Action with to satisfy the requirements?

- A. Lightning Record Page
- B. Lightning Page
- C. Lightning Flow
- D. Lightning Component

Answer: C

Explanation:

Overriding the standard Case New Action with a Lightning Flow allows the developer to create a custom wizard-style interface for creating cases. Lightning Flows can be embedded in Lightning Experience and provide a guided visual experience.

Lightning Flow

NEW QUESTION # 87

A company uses Salesforce to sell products to customers. They also have an external product information management (PIM) system that is the system of record for products.

A developer received these requirements:

* Whenever a product is created or updated in the PIM, a product must be created or updated as a Product2 record in Salesforce and a PricebookEntry record must be created or updated automatically by Salesforce.

= The PricebookEntry should be created in a Pricebook2 that is specified in a custom setting.

What should the developer use to satisfy these requirements?

- A. Invocable Action
- B. SOBJECT Tree REST
- C. Event Monitoring
- D. Custom Apex REST

Answer: D

Explanation:

Custom Apex REST services are the optimal solution for integrating Salesforce with an external PIM system. When a product is created or updated in the PIM, the external system can make a REST call to a custom Apex REST endpoint in Salesforce, which then can create or update the Product2 and PricebookEntry records. This method allows using custom settings to determine the Pricebook2 dynamically.

NEW QUESTION # 88

Which three Visualforce components can be used to initiate Ajax behavior to perform partial page updates?

Choose 3 answers

- A. <apex:actionsStatus>
- B. <apex:commandButton>
- C. <apex:actionSupport>
- D. <apex:commandLink>
- E. <Apex:form>

Answer: B,C,D

Explanation:

<apex:commandLink> and <apex:commandButton> components can cause the form data to be sent to the server and can be configured to refresh specific parts of the page.

<apex:actionSupport> adds AJAX support to other components and can trigger partial page updates based on events such as onclick, onchange, etc.

Visualforce Guide

NEW QUESTION # 89

How should a developer assert that a trigger with an asynchronous process has successfully run?

- A. Create all test data in the test class, invoke `Test.startTest()` and `Test.stopTest()` and then perform assertions.
- B. Create all test data in the test class, use `System.runAs()` to invoke the trigger, then perform assertions.
- C. Insert records into Salesforce, use `seeAllData=true`, then perform assertions.
- D. Create all test data, use `future` in the rest class, then perform assertions.

Answer: A

Explanation:

Use `Test.startTest()` and `Test.stopTest()`. These methods ensure asynchronous code runs within test execution and allows for accurate assertions.

NEW QUESTION # 90

A developer is building a Lightning web component that searches for Contacts. The component must communicate the search results to other unrelated Lightning web components, that are in different DOM trees, when the search completes.

What should the developer do to implement the communication?

- A. Fire an application event.
- B. Publish an event on an event channel.
- C. Publish a message on a message channel.
- D. Fire a custom component event.

Answer: C

Explanation:

For communication between unrelated Lightning web components that are in different DOM trees, the most suitable approach is to use the Lightning Message Service (LMS). This service allows components to communicate with each other using a message channel, which is particularly useful when the components are not in the same containment hierarchy. By publishing and subscribing to messages on a message channel, components can exchange data and notifications, which is ideal for the scenario described. Lightning Web Components Developer Guide - Communicate Across the DOM with Lightning Message Service

NEW QUESTION # 91
