## **Salesforce Certified Platform Developer II - Multiple Choice Sample Questions (Q135-Q140):**

### **NEW QUESTION # 135**

A developer is asked to build a solution that will automatically send an email to the customer when an Opportunity stage changes. The solution must scale to allow for 10,000 emails per day. The criteria to send the email should be evaluated after certain conditions are met.

What is the optimal way to accomplish this?

- A. Use SingleEmailMessage() with an Apex trigger.
- B. Use a Workflow Email Alert.
- C. Use MassEmailMessage () With an Apex trigger.
- D. Use an Email Alert with Flow Builder.

### **Answer: D**

Explanation:

Using an Email Alert with Flow Builder allows for scalable solutions that can handle large volumes of emails, and it offloads the processing from Apex to Salesforce's declarative automation tools. This approach is also bulk-safe, as it does not rely on Apex code that could hit governor limits.

### **NEW QUESTION # 136**

A developer is working with existing functionality that tracks how many times a stage has changed for an Opportunity. When the Opportunity's stage is changed, a workflow rule is fired to increase the value of a field by one. The developer wrote an after trigger to create a child record when the field changes from 4 to 5.

A user changes the stage of an Opportunity and manually sets the count field to 4. The count field updates to 5, but the child record is not created.

What is the reason this is happening?

- A. Trigger.new does not change after a field update.
- B. Trigger.old does not contain the updated value of the count field.
- C. After triggers are not fired after field updates.
- D. After triggers fire before workflow rules.

### **Answer: B**

Explanation:

### **NEW QUESTION # 137**

Consider the following code snippet:

□ A developer created the following test class to provide the proper code coverage for the snippet above:

□ However, when the test runs, no data is returned and the assertion fails. Which edit should the developer make to ensure the test class runs successfully?

- A. Enclose the method call within Test. starttest i) and @Test\_stopTest () .
- B. Implement the without sharing keyword in the searchFeatures Apex class.
- C. Implement the seeAllData=true attribute in the @IsTest annotation.
- D. Implement the setFixedSearchResult= method in the test class.

### **Answer: D**

Explanation:

To ensure that the test class for a search functionality in Salesforce runs successfully, the developer should use the

Test.setFixedSearchResults() method. This allows the test to specify the records that are returned by the search, ensuring that the search behavior is predictable and that the assertion can be properly evaluated.

### NEW QUESTION # 138

A developer is asked to find a way to store secret data with an ability to specify which profiles and users can access which secrets. What should be used to store this data?

- A. Custom settings
- B. Static resources
- **C. Custom metadata**
- D. systemCookie class

**Answer: C**

Explanation:

Custom metadata types are the optimal way to store secret data that needs to be accessed by certain profiles and users. Access to custom metadata records can be controlled by the Salesforce sharing model.

### NEW QUESTION # 139

Given the following code:

□ Assuming there were 10 Contacts and five Accounts created today, what is the expected result?

- A. Systemn.LimitException: Too many SOQL Queries on Account
- B. System.LimitException: Too many SOQL Queries on Contact
- C. SystemQueryException: Too many DML Statement errors on Contact
- **D. SystemQueryException: List has more than one row for Assignment on Account**

**Answer: D**

Explanation:

The loop contains a SOQL query inside, causing it to run multiple times. This will throw a QueryException because the Account query returns more than one row.

### NEW QUESTION # 140

.....
