### NEW QUESTION # 51

Your organization's test strategy states that it is desirable to use more than one method for estimating test effort. You are responsible for estimating test effort for the next project. Based on historical data, the development-to-test effort ratio is 5:3.

The initial estimate for the development effort is 450 person-days.

Which ONE of the following options corresponds to the estimated test effort using the ratio-based method?

- A. 270 person-days
- B. 720 person-days
- C. 750 person-days
- D. 180 person-days

**Answer: A**

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The ratio-based estimation method relies on historical relationships between development and testing effort.

Using the given 5:3 ratio:

$$\text{Test Effort} = \left( \frac{3}{5} \times \text{Development Effort} \right) = \left( \frac{3}{5} \times 450 \right) = 270 \text{ person-days}$$

Thus, the correct answer is 270 person-days (D).

(A) and (C) are incorrect as they overestimate the effort.
