タスクを効率的に完了できない場合は、CTFL-AcT学習教材の使用をお勧めします。特定の状況を評価することにより、合理的なスケジュールを提供し、CTFL-AcT試験トレーニングガイドの拡張可能なバージョンを提供し、短時間でより多くの知識をすばやく把握できます。同時に、あなたはあなたの周りの人々以上のことをします。これがCTFL-AcTテストガイドでできることです。CTFL-AcT学習ガイドは、効率を向上させ、より高い品質でタスクを完了するためのものです。

ISQI CTFL-ACT認定試験は、40の質問で構成される複数選択試験です。試験はオンラインで実施され、60分の

時間制限があります。試験に合格するには、候補者は40マークのうち少なくとも65%または26を獲得する必要があります。この試験は、英語、ドイツ語、フランス語、スペイン語など、いくつかの言語で利用できます。

## ISQI ISTQB Foundation Level - Acceptance Testing 認定 CTFL-AcT 試験問題 (Q21-Q26):

### 質問 # 21

Which of the following provides the BEST description of Beta testing?

- A. In Agile, beta testing must be performed at the same time as user stories are developed
- **B. Beta testing aims to obtain feedback from users in their context of use**
- C. Beta testing is generally performed jointly by testers, business analysts, product owners and developers
- D. The effectiveness of beta testing sessions depends on the quality of the test charter

正解: B

解説:

Beta testing is a form of external user acceptance testing where real users test the product in their environment before the official release. It helps identify issues that may not have been caught in internal testing and gather user feedback on functionality, usability, and performance in real-world conditions.

Option C is correct - the core goal of beta testing is to obtain user feedback in their actual usage context, providing insight into how the system performs outside of controlled environments.

Other options:

A: Test charters are used in exploratory testing, not typically in beta testing.

B: Incorrect - beta testing is not tied to the timing of user story development in Agile.

D: Incorrect - beta testing is performed by end users, not by internal team members like developers or business analysts.

C). Beta testing aims to obtain feedback from users in their context of use

### 質問 # 22

Which one of the following statements regarding the graphical representation of business processes is true?

- A. Graphical representations of business processes must describe the complete workflow in detail, including alternative and error scenarios.
- **B. For acceptance testing, graphical business process models should focus on the user workflows to be tested.**
- C. Business processes should be described graphically using the DMN standard and completed with decision tables.
- D. Using decision tables in BPMN allows defining test conditions corresponding to the business rules under test.

正解: B

解説:

Graphical representations of business processes, particularly using BPMN (Business Process Model and Notation), serve as a bridge between business stakeholders and testers. These models help visualize the steps a user or system goes through, making it easier to derive test cases.

Option C is correct because acceptance testing aims to validate the system's behavior from the user or business perspective.

Therefore, focusing on key user workflows (rather than exhaustive technical or exception paths) aligns with the purpose of acceptance testing: to ensure that the system meets agreed-upon business requirements.

Option A is incorrect because decision tables are part of DMN (Decision Model and Notation), not BPMN.

Option B is too rigid - not all alternative/error paths must be modeled in early acceptance testing unless they are critical to business rules.

Option D misapplies the standards - DMN is used to model business rules, not the complete business process.

C). For acceptance testing, graphical business process models should focus on the user workflows to be tested.

### 質問 # 23

Which one of the following statements regarding ATDD / BDD is true?

- A. ATDD and BDD allow business analysts to code test automation scripts
- B. In BDD, user stories are expressed in the form of 'Given - When - Then' statements
- **C. The concept of "living documentation" means that business requirements become executable**

- D. With visual ATDD, acceptance test cases are obtained from a graphical representation of application
