

# C-IBP-2502 Real Dump & Dumps C-IBP-2502 Vce

BONUS!!! Download part of Exam4Free C-IBP-2502 dumps for free: <https://drive.google.com/open?id=1UXGrrTfstDxzBrHDuCQb3emEA7gqsifr>

Our C-IBP-2502 study guide provides free trial services, so that you can gain some information about our study contents, topics and how to make full use of the software before purchasing. It's a good way for you to choose what kind of C-IBP-2502 test prep is suitable and make the right choice to avoid unnecessary waste. Besides, if you have any trouble in the purchasing C-IBP-2502 practice torrent or trial process, you can contact us immediately and we will provide professional experts to help you online.

Supply the candidates with better product, quicker response. If you need SAP C-IBP-2502 practice test, Exam4Free is good choice. And you don't regret purchasing Exam4Free SAP C-IBP-2502 test. Through the process of IT certification exam, there is a very simple technique for helping you to pass SAP C-IBP-2502 Certification. Exam4Free SAP C-IBP-2502 exam dumps are great. We guarantee that you must pass C-IBP-2502 exam. If you fail, we will REFUND you purchase price. 100% through C-IBP-2502 certification test.

## Dumps C-IBP-2502 Vce - New C-IBP-2502 Test Syllabus

The SAP C-IBP-2502 certification exam offers a great opportunity for professionals to demonstrate their expertise and knowledge level. In return, they can become competitive and updated with the latest technologies and trends. To do this they just need to enroll in SAP C-IBP-2502 Certification Exam and have to put all efforts and resources to pass this challenging C-IBP-2502 exam.

## SAP Certified Associate - SAP IBP for Supply Chain Sample Questions (Q25-Q30):

### NEW QUESTION # 25

You need to define a new logic for a key figure to drive values from the PERPRODCUSTREGION level to the PERPRODCUST level. Which of the following configuration options are possible for this process? Note:

There are 2 correct answers to this question.

- A. Splitting the values from aggregated to detailed level using multiplication by the proportions
- B. Splitting the values from aggregated to detailed level, based on a stored split-factor key figure
- C. Splitting the values from detailed to aggregated level by using a copy operator
- D. Splitting the values from aggregated to detailed level, based on the time profile attribute

**Answer: A,B**

Explanation:

In SAP IBP, key figure calculations often involve disaggregation or aggregation across planning levels. Here, the task is to distribute (disaggregate) values from a higher aggregation level (PERPRODCUSTREGION, i.e., Product-Customer-Region) to a more detailed level (PERPRODCUST, i.e., Product-Customer). This is a common requirement in supply chain planning to allocate regional data to individual customer levels.

\* Option A: Splitting the values from detailed to aggregated level by using a copy operator This is incorrect because the question

specifies moving from PERPRODCUSTREGION (aggregated) to PERPRODCUST (detailed), not the reverse. A copy operator typically copies values without transformation, and aggregation moves data upward, not downward.

\* Option B: Splitting the values from aggregated to detailed level using multiplication by the proportionsThis is correct. In SAP IBP, disaggregation can use proportional factors to split aggregated data. For example, if PERPRODCUSTREGION has a total value (e.g., 100 units), it can be distributed to PERPRODCUST based on predefined proportions (e.g., Customer A gets 60%, Customer B gets 40%). This is configured in the key figure's disaggregation settings using a proportional calculation, a standard feature in SAP IBP's time-series planning.

\* Option C: Splitting the values from aggregated to detailed level, based on the time profile attributeThis is incorrect. Time profile attributes (e.g., week, month) govern temporal granularity, not the structural disaggregation between planning levels like PERPRODCUSTREGION and PERPRODCUST. Disaggregation in SAP IBP is driven by key figure settings, not time profile attributes directly.

\* Option D: Splitting the values from aggregated to detailed level, based on a stored split-factor key figureThis is correct. SAP IBP supports disaggregation using a stored key figure as a split factor. For instance, a key figure like "Customer Distribution Ratio" (stored at PERPRODCUST) can define how the aggregated value (e.g., 100 units at PERPRODCUSTREGION) is split (e.g., 70 units to Customer A, 30 units to Customer B). This method is widely used in SAP IBP for precise, data-driven disaggregation, as documented in SAP's configuration guides.

Thus, B and D align with SAP IBP's disaggregation capabilities, leveraging proportions or stored split factors to move data from an aggregated to a detailed level.

## NEW QUESTION # 26

Which prerequisites must be met to maintain data types via the SAP IBP, add-in for Microsoft Excel? Note: There are 2 correct answers to this question.

- A. The Normalized setting is available in the Planning Area
- B. The Inquire tab is activated in Microsoft Excel
- C. An applicable business catalog is assigned to your business role
- D. Restriction types are set correctly

### Answer: B,C

Explanation:

Maintaining master data types via the SAP IBP Excel add-in (e.g., adding Products, Locations) requires specific system and user setup, as per SAP IBP's Excel integration guidelines.

\* Option A: The Normalized setting is available in the Planning AreaThis is incorrect. "Normalized" is not a standard setting in SAP IBP planning areas related to master data maintenance. It may refer to data normalization conceptually, but it's not a prerequisite.

\* Option B: Restriction types are set correctlyThis is incorrect. "Restriction types" is not a defined term in SAP IBP for Excel-based master data maintenance. Restrictions might apply to planning filters, not data types.

\* Option C: The Inquire tab is activated in Microsoft ExcelThis is correct. The Inquire tab (an Excel add-in) must be enabled to support advanced features like master data maintenance in SAP IBP's Excel UI, ensuring compatibility and functionality, per SAP's technical requirements.

\* Option D: An applicable business catalog is assigned to your business roleThis is correct. Users need a business role with a catalog (e.g., SAP\_BR\_PLANNER) that includes permissions for master data maintenance (e.g., via the "Manage Master Data" tile), per SAP IBP's security model.

Thus, C and D are prerequisites for maintaining data types in Excel, per SAP IBP's official setup documentation.

## NEW QUESTION # 27

You create a planning filter using an SAP IBP Fiori app. Which of the following objects can it be applied to?

Note: There are 2 correct answers to this question.

- A. Jobs in the Application Jobs app
- B. Supply chain graph in Supply Chain Network app
- C. Compare function in the Planning Areas app
- D. Planning view templates in the SAP IBP, add-in for Microsoft Excel

### Answer: A,D

Explanation:

Planning filters in SAP IBP, created via the Manage Planning Filters app (Fiori-based), define subsets of data (e.g., by Product,

Location) for use across various applications. Their applicability depends on SAP IBP's functional scope.

\* Option A: Planning view templates in the SAP IBP, add-in for Microsoft Excel This is correct.

Planning filters can be applied to planning view templates in the Excel add-in to restrict data displayed or edited (e.g., show only products in Region X). This is a core feature for planners, as per SAP IBP's Excel integration documentation.

\* Option B: Jobs in the Application Jobs app This is correct. Planning filters can be parameters in application jobs (e.g., Copy Operator, Purge Data) to limit the scope of data processed (e.g., purge data for specific Locations). This is a standard capability in the Application Jobs app, per SAP IBP's job management guides.

\* Option C: Compare function in the Planning Areas app This is incorrect. The Planning Areas app manages planning area configurations, and while it has a "Compare" function to analyze differences, planning filters are not applied here. Filters are for runtime data, not configuration comparison.

\* Option D: Supply chain graph in Supply Chain Network app This is incorrect. The Supply Chain Network app visualizes the network (e.g., Locations, Transportation Lanes), but planning filters are not directly applied to this graph. Filters affect data views, not network visualizations.

Thus, A and B are the correct objects where planning filters can be applied, per SAP IBP's official functionality.

## NEW QUESTION # 28

Which Supply Planning processes are part of the tactical planning level within a planning hierarchy? Note:

There are 2 correct answers to this question.

- A. Balancing Supply and Demand
- B. Stock Replenishment
- C. Order Prioritization
- D. Inventory Build and Reduction

**Answer: A,D**

Explanation:

In SAP IBP, the planning hierarchy includes strategic (long-term), tactical (medium-term), and operational (short-term) levels.

Tactical planning (e.g., monthly horizon) focuses on mid-term supply chain decisions.

\* Option A: Order Prioritization This is incorrect. Order prioritization is an operational-level process, typically in SAP IBP for Response and Supply, dealing with short-term order allocation, not tactical planning.

\* Option B: Stock Replenishment This is incorrect. Stock replenishment is operational, focusing on short-term actions (e.g., daily/weekly restocking), not tactical mid-term planning.

\* Option C: Inventory Build and Reduction This is correct. Tactical planning involves decisions like building inventory ahead of demand peaks or reducing excess stock over months, aligning with SAP IBP's Inventory Optimization and S&OP processes at this level.

\* Option D: Balancing Supply and Demand This is correct. Balancing supply and demand over a medium-term horizon (e.g., via S&OP or supply heuristics) is a core tactical process in SAP IBP, ensuring resource alignment, per official planning hierarchy definitions.

Thus, C and D are tactical supply planning processes, per SAP IBP's planning framework.

## NEW QUESTION # 29

A company only purchases a license for the SAP IBP S&OP module and wants to maximize the use of its standard functionality.

What processes will they be able to cover? Note: There are 3 correct answers to this question.

- A. Conduct Sales and Operations Planning meetings with cross-functional representatives
- B. Prepare versions of S&OP plan based on different optimizer modeling costs
- C. Review critical resources against demand
- D. Get system-solving recommendations on how to react to production bottlenecks
- E. Build what-if scenarios for breaching supply-demand gaps

**Answer: A,B,E**

Explanation:

The SAP IBP S&OP module focuses on demand, supply, and inventory alignment using time-series planning, per its standard functionality documentation.

\* Option A: Review critical resources against demand This is incorrect. Resource capacity planning (e.g., finite scheduling) is part of Supply or Response modules, not standard S&OP, which uses infinite heuristics by default.

\* Option B: Conduct Sales and Operations Planning meetings with cross-functional representatives This is correct. Facilitating

S&OP meetings to align demand and supply (e.g., via Consensus Demand Plan) is a core S&OP process, per SAP IBP's documentation.

\* Option C: Build what-if scenarios for breaching supply-demand gaps This is correct. What-if analysis using versions/scenarios (e.g., adjusting supply plans) is standard in S&OP, per SAP IBP's capabilities.

\* Option D: Prepare versions of S&OP plan based on different optimizer modeling costs This is correct. The S&OP optimizer can model cost-based scenarios (e.g., varying non-delivery costs), a standard feature, per SAP IBP's documentation.

\* Option E: Get system-solving recommendations on how to react to production bottlenecks This is incorrect. Detailed bottleneck resolution is part of Response or finite planning, not standard S&OP functionality.

Thus, B, C, and D are covered by S&OP, per SAP IBP's official module scope.

## NEW QUESTION # 30

.....

The Exam4Free is one of the top-rated and leading platforms that have been offering a simple, smart, and easiest way to pass the challenging C-IBP-2502 exam with good scores. The SAP C-IBP-2502 Exam Questions are real, valid, and updated. These C-IBP-2502 exam practice questions are designed and verified by experienced and qualified C-IBP-2502 exam experts.

**Dumps C-IBP-2502 Vce:** <https://www.exam4free.com/C-IBP-2502-valid-dumps.html>

Our C-IBP-2502 exam questions and answers are tested for many times by our professionals who have been engaged in this field for 10 years, Come and buy our C-IBP-2502 exam materials, you will get more than you can imagine, I found it easy to use and it helped me in understanding the C-IBP-2502 questions easily, If you want to pass the exam, please using our C-IBP-2502 torrent vce.

It is rare to find one individual with such a wide C-IBP-2502 range of knowledge in the design-related fields, You will install routers and a firewall, Our C-IBP-2502 Exam Questions And Answers are tested for many times by our professionals who have been engaged in this field for 10 years.

## Free PDF SAP - Updated C-IBP-2502 - SAP Certified Associate - SAP IBP for Supply Chain Real Dump

Come and buy our C-IBP-2502 exam materials, you will get more than you can imagine, I found it easy to use and it helped me in understanding the C-IBP-2502 questions easily.

If you want to pass the exam, please using our C-IBP-2502 torrent vce, Fate is not an opportunity but a choice.
