Purchase Actual4Dumps best AWS-Certified-Developer-Associate study material today and get these stunning offers.

The AWS-Certified-Developer-Associate certification exam covers a wide range of topics related to AWS services, including developing and maintaining applications written for Amazon Simple Storage Service (S3), Amazon DynamoDB, Amazon Simple Queue Service (SQS), and Amazon Simple Notification Service (SNS). AWS-Certified-Developer-Associate Exam also covers topics related to AWS Identity and Access Management (IAM), AWS Elastic Beanstalk, AWS CloudFormation, and AWS CloudWatch.

Amazon AWS Certified Developer Associate Exam (DVA-C02) Sample Questions (Q15-Q20):

NEW QUESTION # 15

A user has created photo editing software and hosted it on EC2. The software accepts requests from the user about the photo format and resolution and sends a message to S3 to enhance the picture accordingly. Which of the below mentioned AWS services

will help make a scalable software with the AWS infrastructure in this scenario?

- A. AWS Simple Notification Service
- **B. AWS Simple Queue Service**
- C. AWS Elastic Transcoder
- D. AWS Glacier

Answer: B

Explanation:

Amazon Simple Queue Service (SQS) is a fast, reliable, scalable, and fully managed message queuing service. SQS provides a simple and cost-effective way to decouple the components of an application. The user can configure SQS, which will decouple the call between the EC2 application and S3. Thus, the application does not keep waiting for S3 to provide the data.

NEW QUESTION # 16

A company experienced partial downtime during the last deployment of a new application. AWS Elastic Beanstalk split the environment's Amazon EC2 instances into batches and deployed a new version one batch at a time after taking them out of service. Therefore, full capacity was not maintained during deployment.

The developer plans to release a new version of the application, and is looking for a policy that will maintain full capacity and minimize the impact of the failed deployment.

Which deployment policy should the developer use?

- A. Rolling
- B. All at Once
- C. Immutable
- **D. Rolling with an Additional Batch**

Answer: D

Explanation:

<https://docs.aws.amazon.com/elasticbeanstalk/latest/dg/using-features.rolling-version-deploy.html>

NEW QUESTION # 17

An e-commerce site allows returning users to log in to display customized web pages. The workflow is shown in the image below:

An application is running on EC2 instances. Amazon RDS is used for the database that stores user accounts and preferences. The website freezes or is slow to load while waiting for the login step to complete. The remaining components of the site are well-optimized.

Which of the following techniques will resolve this issue? (Select Two.)

- A. Implement the user login page as an asynchronous Lambda function.
- B. Use Amazon Application Load Balancer to load balance the traffic to the website.
- **C. Call the database asynchronously so the code can continue executing.**
- **D. Use Amazon ElastiCache for MemCached to cache user data.**
- E. Batch login requests from hundreds of users together as a single read request to the database.

Answer: C,D

Explanation:

Explanation

<https://docs.aws.amazon.com/sdk-for-javascript/v2/developer-guide/making-asynchronous-calls.html>

NEW QUESTION # 18

Developer is creating an AWS Lambda function to process a stream of data from an Amazon Kinesis Data Stream. When the Lambda function parses the data and encounters a missing field, it exits the function with an error. The function is generating duplicate records from the Kinesis stream. When the Developer looks at the stream output without the Lambda function, there are no duplicate records.

What is the reason for the duplicates?

- A. The Lambda event source used asynchronous invocation, resulting in duplicate records.
- B. The Lambda function is not keeping up with the amount of data coming from the stream.
- **C. The Lambda function did not advance the Kinesis stream pointer to the next record after the error.**
- D. The Lambda function did not handle the error, and the Lambda service attempted to reprocess the data.

Answer: C

Explanation:

<https://docs.aws.amazon.com/lambda/latest/dg/with-kinesis.html>

NEW QUESTION # 19

A developer needs to create an application that supports Security Assertion Markup Language (SAML) and Facebook authentication. It must also allow access to AWS services, such as Amazon DynamoDB.

Which AWS service or feature will meet these requirements with the LEAST amount of additional coding?

- A. Amazon Cognito identity pools
- **B. Amazon Cognito user pools**
- C. Amazon Lambda@Edge
- D. AWSAppSync

Answer: B

NEW QUESTION # 20
