With this certification, you can live the life of the high-level white-collar. You can become a power IT professionals, and get the respect from others. Dumpkiller will provide you with excellent ISACA CDPSE Exam Training materials, and allows you to achieve this dream effortlessly. Are you still hesitant? Do not hesitate, Add the Dumpkiller's ISACA CDPSE exam training materials to your shopping cart quickly.

The Certified Data Privacy Solutions Engineer (CDPSE) is a certification offered by ISACA that focuses on data privacy solutions engineering. Certified Data Privacy Solutions Engineer certification is designed for IT and security professionals who are responsible for implementing and managing data privacy solutions in their organizations. It provides a comprehensive understanding of data privacy regulations, frameworks, and best practices, as well as the technical skills needed to design and implement effective privacy solutions.

The CDPSE exam is designed to test an individual's proficiency in various areas of data privacy such as privacy program governance, privacy operations, privacy architecture, and privacy regulations and standards. CDPSE Exam measures an individual's ability to evaluate privacy risks, develop and implement privacy policies, and ensure compliance with various privacy regulations such as GDPR, CCPA, HIPAA, and PCI DSS. CDPSE exam also tests an individual's understanding of privacy technologies and their ability to implement and manage privacy solutions.

ISACA Certified Data Privacy Solutions Engineer Sample Questions (Q27-Q32):

NEW QUESTION # 27

A new marketing application needs to use data from the organization's customer database. Prior to the application using the data, which of the following should be done FIRST?

- A. Ensure the data loss prevention (DLP) tool is logging activity.
- **B. Determine what data is required by the application.**
- C. Renew the encryption key to include the application.
- D. De-identify all personal data in the database.

Answer: B

Explanation:

Explanation

Before using data from the organization's customer database for a new marketing application, the first step should be to determine what data is required by the application and for what purpose. This will help to ensure that the data collection and processing are relevant, necessary, and proportionate to the intended use, and that the data minimization principle is followed. Data minimization means that only the minimum amount of personal data needed to achieve a specific purpose should be collected and processed, and that any excess or irrelevant data should be deleted or anonymized¹. This will also help to comply with the data privacy laws and regulations that apply to the organization, such as the General Data Protection Regulation (GDPR) or the California Consumer Privacy Act (CCPA), which require organizations to inform data subjects about the types and purposes of data processing, and to obtain their consent if needed^{2,3}.

NEW QUESTION # 28

Which of the following BEST ensures a mobile application implementation will meet an organization's data security standards?

- **A. Privacy impact assessment (PIA)**
- B. Automatic dynamic code scan
- C. Data classification
- D. User acceptance testing (UAT)

Answer: A

NEW QUESTION # 29

Which of the following BEST ensures a mobile application implementation will meet an organization's data security standards?

- A. Data classification
- B. User acceptance testing (UAT)
- C. Privacy impact assessment (PIA)
- **D. Automatic dynamic code scan**

Answer: D

Explanation:

A mobile application implementation should meet the organization's data security standards by ensuring that the application does not contain any vulnerabilities, errors or malicious code that could compromise the confidentiality, integrity or availability of the data. An automatic dynamic code scan is a technique that analyzes the application code while it is running to detect and report any security issues or defects. An automatic dynamic code scan can help to identify and fix any potential data security risks before the application is deployed. The other options are not sufficient to ensure data security standards. UAT is a process of verifying that the application meets the user requirements and expectations, but it does not necessarily test for data security. Data classification is a process of categorizing data according to its sensitivity and value, but it does not ensure that the data is protected by the application. A PIA is a process of identifying and evaluating the privacy impacts of a system or project that involves personal data, but it does not ensure that the system or project meets data security standards. , p. 89-90 Reference: : CDPSE Review Manual (Digital Version)

NEW QUESTION # 30

How can an organization BEST ensure its vendors are complying with data privacy requirements defined in their contracts?

- A. Review self-attestations of compliance provided by vendor management.
- **B. Compare contract requirements against vendor deliverables.**
- C. Perform penetration tests of the vendors' data security.
- D. Obtain independent assessments of the vendors' data management processes.

Answer: B

NEW QUESTION # 31

Which of the following is the MOST important attribute of a privacy policy?

* Breach notification period

- A. Data retention period
- B. Transparency
- **C. Language localization**

Answer: C

Explanation:

Explanation

Transparency is the most important attribute of a privacy policy because it informs the users about how their personal data is collected, used, shared, and protected by the organization. Transparency also helps to build trust and confidence with the users, and to comply with legal and ethical obligations regarding data privacy.
