BONUS!!! Download part of TopExamCollection ACA100 dumps for free: <https://drive.google.com/open?id=1o2-ipuTbZLfxooTf9zcAAVf885eSYp7>

Now are you in preparation for ACA100 exam? If so, you must be a man with targets. Our TopExamCollection are committed to help such a man with targets to achieve the goal. ACA100 exam simulation software developed by us are filled with the latest and comprehensive questions. If you buy our product, we will offer one year free update of the questions for you. With our software, passing ACA100 Exam will no longer be the problem.

Appian ACA100 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Business Process Modeling: Your skills in business process modeling within Appian will be assessed here. You need to be familiar with different integration types, BPMN elements, and the best practices for defining user roles in process model diagrams. Your ability to specify correct nodes for scenarios, understand gateway types in the Process Modeler, and identify automation opportunities within a process will be critical to become an Appian analyst.
Topic 2	<ul style="list-style-type: none"> Introduction to the Appian Platform: This topic assesses the understanding of analysts about the key components and capabilities of the Appian Platform. Aspiring Appian analysts will need to demonstrate knowledge of Appian objects, resources, and role-based security. Additionally, the grasp of Appian use cases and user experiences, as well as the ability to differentiate among Appian Designer, Process Modeler, and Cloud Database, will be tested.
Topic 3	<ul style="list-style-type: none"> User Story Creation: This topic examines your ability to create and manage user stories in an Appian context. To become Appian analyst, you will need to demonstrate how to illustrate standard user story formats, categorize them, and collaborate with Product Owners on managing product backlogs. Additionally, the exam will test skills about identifying story status and understanding the various components of a user story, such as description and acceptance criteria.
Topic 4	<ul style="list-style-type: none"> Requirements Gathering: In this part of the Appian ACA100 Exam, your ability to effectively gather and interpret business requirements is evaluated. You will be tested on your understanding of the requirement gathering process, how Appian features can meet business needs, and how to translate requirements into user stories and development plans. Additionally, you will need to address common challenges in this area and know when to apply specific UI components within Appian interfaces.
Topic 5	<ul style="list-style-type: none"> Appian Software Development Lifecycle (SDLC): The topic tests your expertise in navigating the Appian SDLC and your role as an analyst in each phase, from initial build to optimization. You will need to distinguish between different SDLC stages, understand scrum lifecycle elements like DoD and DoR. Your ability to recognize team roles and responsibilities is essential to become certified Appian analyst.

Test ACA100 Dumps.zip, ACA100 Reliable Practice Questions

To ensure your success, you require Appian ACA100 Exam Questions that provide comprehensive and relevant information for a fully prepared approach to the Appian Certified Analyst (ACA100) exam. While numerous online guides offer ACA100 Exam Questions, caution is necessary to avoid falling victim to online scams. Trust TopExamCollection for the ultimate preparation experience with their Appian Certified Analyst (ACA100) exam questions.

Appian Certified Analyst Sample Questions (Q71-Q76):

NEW QUESTION # 71

You are an Appian Analyst.

According to best practices, which other role should you work with to create process models as a part of requirements gathering?

- A. Scrum Master
- **B. Product Owner**
- C. Product Manager
- D. Architect

Answer: B

Explanation:

As an Appian Analyst, collaborating with a Product Owner during the creation of process models is considered best practice. The Product Owner is responsible for defining the requirements and ensuring that the process models align with the business goals and needs. The Product Owner has a deep understanding of the product vision and user stories, which are crucial during the requirements gathering phase.

* Role of Product Owner:

* The Product Owner provides detailed requirements and prioritizes them based on business needs.

* They ensure that the process models being developed accurately reflect the intended business processes and user stories.

* Close collaboration with the Product Owner ensures that the process models are aligned with both the technical and business aspects of the project.

* Why Not Other Options?:

* A. Product Manager: Typically focuses on the overall product strategy and market alignment rather than detailed process modeling.

* C. Architect: While architects provide valuable input on the system's design and architecture, they are not primarily responsible for requirements gathering.

* D. Scrum Master: The Scrum Master facilitates the Agile process but does not directly contribute to defining or modeling business processes.

NEW QUESTION # 72

Which Appian component would you use to display a large amount of data in a user-friendly, interactive way?

- A. Pie Chart Component
- B. Dropdown Component
- **C. Record Grid Component**
- D. Milestone Component

Answer: C

Explanation:

Explanation:

NEW QUESTION # 73

You are translating a user requirement into a user story and need to ensure that the desired functionality will be delivered as

expected.

What needs to be written into the user story to ensure it will meet the requirement?

- A. Estimation of effort to develop
- **B. Acceptance criteria**
- C. Test Script
- D. Business value

Answer: B

NEW QUESTION # 74

Improvements are being considered for an Expense Process, and you have been asked to capture that there is now an approval task sent to the finance manager.

As part of the approval, the process should also reflect that if the payment has not been authorized within 48 hours, a reminder message is sent to the finance manager to inform them they have an outstanding task.

Which Business Process Model and Notation (BPMN) notation type would you use to illustrate the reminder message?

- A. Gateway
- B. Start event
- **C. Intermediate event**
- D. Data object

Answer: C

Explanation:

In BPMN, an intermediate event is used to indicate events that occur between the start and end of a process.

To model a reminder message that is sent if the payment is not authorized within 48 hours, an intermediate event, specifically a timer intermediate event, is the appropriate notation.

* Intermediate Event Overview :

* An intermediate event can be used to model actions such as delays, triggers, or messages that happen during the course of a process.

* A timer intermediate event would be used to trigger the reminder after a set period (in this case, 48 hours).

* Why Not Other Options? :

* A. Data Object : Represents data stored or used by the process, not an event or action.

* B. Gateway : Used for decision points or branching paths, not for triggering events.

* D. Start Event : Marks the beginning of a process and cannot be used mid-process.

:

Appian Documentation on BPMN Events: BPMN Events

Using an intermediate event ensures that the process can trigger the reminder at the right time, enhancing process automation and efficiency.

NEW QUESTION # 75

Which is an accurate statement about application security?

- A. Any user can develop and access an Appian application without an account. However, deployments cannot be done without an account.
- B. Admins require an account in Appian to use the Admin Console, while all other basic user actions can be done without an account.
- **C. Every user must have an account created in Appian in order to develop, administer, and/or access an Appian application.**
- D. Developers require an account in Appian, while any users can access an Appian application without an account.

Answer: C

Explanation:

In Appian, every user who needs to interact with the platform, whether for development, administration, or accessing applications, must have an account. This is a fundamental security measure to ensure that only authorized users can interact with the system.

* Appian Security Overview :

* Each user account in Appian has specific permissions based on roles, ensuring that users can only access what they are authorized
