## EMC Dell PowerProtect Data Manager Deploy 2023 Exam Sample Questions (Q85-Q90):

### NEW QUESTION # 85

An Oracle administrator is preparing an RMAN recovery script using PowerProtect Data Manager. What is the default installation location of the DD Boost library file?

- A. \$ORACLE\_HOME/lib
- B. \$RMAN\_AGENT/lib
- C. \$RMAN\_AGENT\_HOME/lib
- D. \$ORACLE\_AGENT\_HOME/lib

**Answer: C**

Explanation:

In Dell PowerProtect Data Manager (PPDM), protecting Oracle databases involves the use of the PowerProtect Data Manager Oracle RMAN agent. This agent facilitates the communication between the Oracle Recovery Manager (RMAN) and the PowerProtect DD (Data Domain) system.

\* **The Library File:** To enable the RMAN " SBT\_TAPE " device to communicate with the protection storage via the DD Boost protocol, a specific library file (usually libddobk.so on Linux or libddobk.dll on Windows) must be referenced in the RMAN script.

\* **Path Variable:** During the installation of the RMAN agent, a set of environment variables is established. The root directory where the agent is installed is referred to as \$RMAN\_AGENT\_HOME (typically /opt/dpsapps/rmanagent on Linux).

\* **Location:** The library files required for the RMAN configuration are stored in the libsubdirectory.

Therefore, the correct path to provide in the SBT\_LIBRARY parameter of the RMAN script is \$RMAN\_AGENT\_HOME/lib.

Ensuring the correct path is used is vital for the RMAN channel allocation to succeed, allowing PPDM to manage the backup and recovery metadata while the data flows directly to the DD system.

### NEW QUESTION # 86

Which user roles can view the audit logs to monitor system activity?

- A. Operator, Administrator, and Backup Administrator
- B. Administrator, Backup Administrator, Restore Administrator, and User
- C. Security Administrator and Administrator

**Answer: C**

Explanation:

PowerProtect Data Manager enforces strict Role-Based Access Control (RBAC) to protect the integrity of system logs and security configurations.

**Audit Logs:** These logs record sensitive information regarding who accessed the system, what changes were made to security settings, and when specific administrative actions occurred.

**Permitted Roles:** Because audit logs are a security and compliance feature, visibility is restricted.

Only the Administrator (who has full system rights) and the Security Administrator (who is responsible for managing users, certificates, and compliance) have the necessary privileges to view the Audit Logs menu.

**Other Roles:** Roles such as Backup Administrator or Restore Administrator are focused on operational tasks (managing policies and data recovery) and do not have the inherent rights to view the system-wide security audit trail.

### NEW QUESTION # 87

- A. Storage configuration of the VM
- B. Physical location of the VM host
- C. VM's guest operating system type
- D. Number of CPUs allocated to the VM

**Answer: A**

**NEW QUESTION # 88**

In configuring PowerProtect Data Manager with a NAS device, which protocol is preferred for efficient data transfer?

Response:

- A. FTP
- B. SMB
- C. iSCSI
- **D. NFS**

**Answer: D**

**NEW QUESTION # 89**

In a scenario where PowerProtect Data Manager is integrated with SAP HANA, what unique consideration is necessary?

- A. Cross-platform compatibility
- B. Large file system support
- **C. In-memory database handling**
- D. Multi-threaded processing

**Answer: C**
