With over a decade's business experience, our NCA-6.5 test torrent attached great importance to customers' purchasing rights all along. There is no need to worry about virus on buying electronic products. For we make endless efforts to assess and evaluate our NCA-6.5 exam prep' reliability for a long time and put forward a guaranteed purchasing scheme, we have created an absolutely safe environment and our NCA-6.5 Exam Question are free of virus attack. Given that there is any trouble with you, please do not hesitate to leave us a message or send us an email; we sincere hope that our NCA-6.5 test torrent can live up to your expectation.

Nutanix NCA-6.5 certification exam consists of 60 multiple-choice questions that need to be completed within 90 minutes. NCA-6.5 exam is administered online and can be taken from anywhere. NCA-6.5 exam is designed to test your knowledge and skills in various areas such as Nutanix cluster installation, configuration, administration, and troubleshooting. NCA-6.5 Exam also tests your knowledge of virtualization technologies, storage technologies, networking technologies, and security technologies.

Nutanix Certified Associate (NCA) v6.5 exam Sample Questions (Q20-Q25):

NEW QUESTION # 20
Which feature or configuration is best for securing network traffic between the management and storage replication environments?

- A. VM Anti-Affinity Rules
- B. Different Storage Containers
- C. Network Segmentation
- D. Use of Firewall Rules

Answer: C

Explanation:
Network segmentation is the best feature or configuration for securing network traffic between the management and storage replication environments. Network segmentation is the practice of dividing a computer network into subnets, each serving a different purpose or function. By dividing the network into different segments, it is possible to control and monitor the flow of traffic between the different segments, and to implement different security policies for each segment.
For example, the management environment could be segmented from the storage replication environment, and only specific traffic, such as management traffic, would be allowed to flow between the two segments. This can help to protect the management environment from potential security threats that may originate from the storage replication environment.
Other options like firewall rules, VM anti-affinity rules, and different storage containers can also help to secure network traffic, but network segmentation provides a more comprehensive and granular way to secure the traffic between different environments.
You can find more information on this topic in the Nutanix Security Configuration Guide, which is available on the Nutanix support website: https://portal.nutanix.com/#/page/docs/details?targetId=Security-Guide-v5_24:Security-Guide-v5_24

NEW QUESTION # 21
Which option is available for an administrator to upload a remote disk file to Image Configuration?

- A. SFTP
- B. FTP
- C. SCP
- D. HTTP

Answer: D

Explanation:
HTTP is the only option available for an administrator to upload a remote disk file to Image Configuration. FTP, SCP, and SFTP are not supported by Nutanix. Reference: https://www.nutanix.com/content/dam/nutanix/resources/misc/ebg-nca-6-5.pdf (page 24)

NEW QUESTION # 22
An administrator has defined a security policy that needs to be applied to dozens of VMs. What is the most efficient way the administrator can perform this?

- A. Within the policy, select all the VMs it should be applied to.

- B. Apply the same label to all the VMs, then bind the policy to the label.
- C. Use a script to apply the policy to the defined VMs.
- D. Apply a category to the VMs. and associate the category with the policy.

Answer: B

Explanation:
Labels allow administrators to group related objects, such as VMs, and then apply policies to those labels, rather than having to manually apply the policy to each individual VM. This is the most efficient way for an administrator to apply a security policy to dozens of VMs. Reference: https://portal.nutanix.com/page/documents/details?targetId=Platform-Administrator-Guide-v5_7:pag-sec-category-label-c.html

NEW QUESTION # 23

An administrator needs to provide data integrity at the application level for a VM that is replicated to a secondary site. Which requirement will satisfy this task?

- A. 1 VM per Schedule
- B. 1 VM per Availability Zone
- C. 1 VM per Protection Domain
- D. 1 VM per Consistency Group

Answer: A

NEW QUESTION # 24

Which option allows administrators to specify groups of VMs and assign them to a destination for Disaster Recovery using Leap?

- A. Recovery Plans
- B. Protection Policies
- C. Security Policies
- D. Availability Zones

Answer: D

Explanation:
Administrators can use recovery plans to specify groups of virtual machines and assign them to a destination for disaster recovery using Leap. Reference: Nutanix Certified Associate 6.5 Exam Study Guide, page 56
