

EvenPasswdm이 Good이죠 Chrome Enterprise Administrator 시험대비더표는 신제 시험문제 출제경향은 충분히 어그

주제 2	• Manage Chrome Enterprise in the Cloud: This section of the exam measures skills of a Cloud Systems Administrator and focuses on preparing and configuring environments for Chrome cloud management. Candidates must demonstrate how to verify domains, use admin roles, configure organizational structures, deploy enrollment tokens, enable reporting, and maintain Chrome using the Google Admin console.
주제 3	• Analyze Chrome Data: This section of the exam measures skills of a Chrome Data Analyst and focuses on using the Google Admin console to view, analyze, and troubleshoot browser data. It includes reviewing reports, diagnosing browser or update issues, investigating performance problems, and identifying security risks based on log events and Chrome activity.
주제 4	• Chrome Updates: This section of the exam measures skills of a Chrome IT Policy Analyst and addresses the various update methods available for Chrome. It includes selecting the right update strategy for different business and security needs, managing compliance across platforms, and adapting update methods based on environmental changes or risks.
주제 5	• Chrome Extensions: This section of the exam measures skills of an Endpoint Security Manager and involves managing Chrome extension policies. It includes designing extension management strategies, handling extension exemptions, creating approval workflows, and assessing extensions for their risk and compliance with business continuity requirements.

안심하시고ExamPassdump 를 선택하게 하기 위하여, ExamPassdump에서는 이미Google Chrome-Enterprise-Administrator 인증시험의 일부 문제와 답을 사이트에 올려놔오니 체험해보실 수 있습니다. 그러면 저희한테 신뢰가 갈 것이며 또 망설임 없이 선택하게 될 것입니다. 저희 덤프로 여러분은 한번에 시험을 패스할 수 있으며 또 개인시간도 절약 하고 무엇보다도 금전상으로 절약이 제일 크다고 봅니다. ExamPassdump는 여러분들한테 최고의Google Chrome-Enterprise-Administrator문제와 답을 제공함으로 100%로의 보장 도를 자랑합니다, 여러분은Google Chrome-Enterprise-Administrator인증시험의 패스로 IT업계여서도 또 직장에서도 한층 업그레이드되실 수 있습니다. 여러분의 미래는 더욱더 아름다울 것입니다.

최신 Professional Chrome Enterprise Chrome-Enterprise-Administrator 무료 샘플문제 (Q30-Q35):

질문 # 30

A company has multiple departments, including Engineering, Marketing, Sales, and HR. Each department has different needs and schedules for Chrome updates. For instance, the Engineering team requires the latest updates as soon as they are available to ensure they have the latest features and security patches. However, the HR department prefers a more stable environment and only wants updates after they have been thoroughly tested.

Which feature in the Google Admin console can an administrator use to meet the company's requirements?

- A. Create organizational units for each department
- B. Create different user groups for each department
- C. Create active directory forest for each department
- D. Set device policies for each department

정답: A

설명:

Organizational Units (OUs) in the Google Admin console allow administrators to apply different Chrome policies to different groups of devices or users based on their organizational structure. By creating separate OUs for Engineering and HR (and potentially other departments), the administrator can configure different Chrome update policies for each OU, ensuring Engineering gets rapid updates while HR stays on a more stable release. User groups primarily manage access to services, and device policies are generally applied at the device level, not necessarily tied to departmental needs for update cadences. Active Directory forests are a Microsoft concept and not directly used for managing Chrome update policies in the Google Admin console.

질문 # 31

An administrator wants users to have the ability to install extensions of their choosing. However, due to company security policies, the administrator cannot allow any extension to be installed that has the ability to read documents on the local drive. Which policy combination best meets the administrator's need?

- A. Chrome Webstore: Allow all apps, admin manages blocklist; Runtime Blocked Hosts: file:///*
- B. Chrome Webstore: Allow all apps, admin manages blocklist; Runtime Blocked Hosts: C:*
- C. Chrome Webstore: Block all apps, admin manages allowlist; Block extensions by permission: Sync File System
- **D. Chrome Webstore: Allow all apps, admin manages blocklist; Block extensions by permission: File System**

정답: D

설명:

To allow users to install extensions while blocking those with specific risky permissions, the administrator should "Allow all apps" from the Chrome Web Store and then use the "Block extensions by permission" policy to block extensions that request the "File System" permission. This prevents extensions from accessing local files. Option A is too restrictive by blocking all apps by default. Options B and D use "Runtime Blocked Hosts," which is for controlling access to specific websites, not for blocking extension permissions.

질문 # 32

A small business wants to have all of their macOS devices enroll in Chrome Enterprise Core. They do not have a Mobile Device Management solution but do maintain a base image for their Mac computers. Where should they put the enrollment token*?

- **A. /Library/Google/Chrome/CloudManagementEnrollmentToken**
- B. /etc/opt/chrome/policies/enrollment/CloudManagementEnrollmentToken
- C. /Library/Google/Chrome/Enrollment/DeviceManagementToken
- D. HKEY_LOCAL_MACHINE\SOFTWARE\Policies\Google\Chrome\CloudManagementEnrollmentToken

정답: A

설명:

For macOS devices without MDM, the enrollment token can be embedded in the base image. The correct path for placing the cloud management enrollment token on macOS is '/Library/Google/Chrome/CloudManagementEnrollmentToken'. The other paths listed are for Windows Registry (A), a non-standard Linux path (C), and a potentially incorrect macOS path (D).

질문 # 33

A Chrome administrator notices that a Chrome browser is checking in with the Google Admin console but has not received a new cloud computer policy setting that was recently deployed. During the investigation, the administrator deletes the Chrome browser from the Google Admin console. What action can be taken to have the browser re-enroll in the Google Admin console?

- A. Delete the enrollment token from the device and relaunch Chrome
- B. Delete the Chrome Policies from the device and reboot
- C. Delete the Chrome Browser Cache and sign back in to Chrome
- **D. Delete the device management token from the device and relaunch Chrome**

정답: D

설명:

When a managed browser is deleted from the Google Admin console, it needs to be re-enrolled to receive policies again. The process for re-enrollment typically involves deleting the "**device management token**" from the local machine. Upon relaunching Chrome, the browser will detect the absence of the token and attempt to re-enroll with the cloud management service, at which point it will receive a new token and the latest policies. Deleting the enrollment token (option B) might disrupt the initial enrollment if it still existed.

Deleting Chrome policies (option C) might not trigger re-enrollment. Clearing the cache and signing back in (option D) addresses user profile data, not device enrollment.

질문 # 34

An IT administrator manages a large organization that uses Chrome browser across multiple platforms including Windows, macOS, and Linux. The organization has diverse user needs and varying levels of risk associated with different departments, for which the administrator must determine the most efficient method to manage Chrome updates across the organization. Why is it advantageous to manage Chrome update policies using the Google Admin console instead of the Group Policy Management Console (GPMC)?

- A. The Google Admin console does not allow administrators to view the browser version of any given managed device as Group Policy does
- B. Group Policy does not support Chrome update policies
- **C. Group Policy does not support platforms other than Windows**
- D. The Google Admin console is only applicable to devices with ChromeOS, making it more secure

정답: C

설명:

The key advantage of using the Google Admin console for managing Chrome updates in a multi-platform environment is its ability to apply policies consistently across Windows, macOS, and Linux devices. Group Policy (GPMC) is a Windows-specific tool and cannot natively manage Chrome updates on other operating systems. The Google Admin console provides a centralized and platform-agnostic approach to Chrome management.
