

100% Pass 2026 Snowflake Updated GES-C01 Labs

BONUS!!! Download part of BraindumpsIT GES-C01 dumps for free: <https://drive.google.com/open?id=1qqFRM-ZXDpJnRYYf2CQHE3dS9uVfsQm5>

Each important section of the syllabus has been given due place in our GES-C01 practice braindumps. Hence, you never feel frustrated on any aspect of preparation, staying with our GES-C01 learning guide. Every GES-C01 exam question included in the versions of the PDF, SOFTWARE and APP online is verified, updated and approved by the experts. With these outstanding features of our GES-C01 Training Materials, you are bound to pass the exam with 100% success guaranteed.

Our SnowPro® Specialty: Gen AI Certification Exam exam question has been widely praised by all of our customers in many countries and our company has become the leader in this field. Our product boost varied functions and they include the self-learning and the self-assessment functions, the timing function and the function to stimulate the exam to make you learn efficiently and easily. Thus you could decide whether it is worthy to buy our product or not after you understand the features of details of our product carefully on the pages of our GES-C01 Study Tool on the website.

>> GES-C01 Labs <<

Approved GES-C01 Certified Information Systems Security Professional Exam Questions

We did not gain our high appraisal by our GES-C01 real exam for nothing and there is no question that our GES-C01 practice materials will be your perfect choice. Though it is unavoidable that you may baffle by some question points during review process, our GES-C01 Study Guide owns clear analysis under some necessary questions. So as long as you practice our GES-C01 training quiz, you will perfect yourself to pass your exam successfully.

Snowflake SnowPro® Specialty: Gen AI Certification Exam Sample Questions (Q142-Q147):

NEW QUESTION # 142

An administrator has configured the 'CORTEX MODELS ALLOWLIST' parameter to only permit the 'mistral-large?' model at the account level. A user with the 'PUBLIC' role, which has been granted 'SNOWFLAKE.CORTEX USER' and 'SNOWFLAKE."CORTEX- MODEL-ROLE-LLAMA3.1-70B"', attempts to execute several 'COMPLETE (SNOWFLAKE.CORTEX)' queries. Which of the following queries will successfully execute?

- A.
- B.
- C.
- D.
- E.

Answer: A,B

Explanation:

Option A is correct because the query directly references 'MISTRAL-LARGE2', which is explicitly in the account-level, so it will succeed. Option B is correct because when a model name is provided as a fully-qualified string argument (e.g., Cortex treats it as an identifier for a schema-level model object. If found, role-based access control (RBAC) is applied. The user's role has granted, which provides access to the 'LLAMA3.1-70B' model object in 'SNOWFLAKE.MODELS, regardless of the setting for plain model names. Option C is incorrect. When 'llama3.1-70b' is provided as a plain model name string, Cortex first attempts to match it as a schema-level model object (e.g., 'SNOWFLAKE.MODELS.llama3.1-70b). If this direct match fails (which is typical for a plain, unquoted name not exactly matching a model object identifier), it then checks the plain name 'llama3.1-70b' against the 'CORTEX MODELS ALLOWLIST. Since 'llama3.1-70b' is not in the allowlist, this query will fail, even though the user has access to the fully-qualified model object. Option D is incorrect as 'snowflake-arctic' is neither in the 'CORTEX MODELS ALLOWLIST' nor does the user have a specific application role granting access to a 'snowflake-arctic' model object. Option E is incorrect because 'ALTER ACCOUNT' operations can only be performed by the 'ACCOUNTADMIN' role, not by a user with the 'PUBLIC' role.

NEW QUESTION # 143

A financial analytics team is using to extract specific financial metrics (e.g., revenue, profit margin) from quarterly reports and requires the output in a strict JSON format for automated ingestion into a data warehouse. They've encountered issues where the LLM sometimes generates malformed JSON or includes extraneous text. Which of the following approaches will help ensure deterministic, schema-compliant JSON outputs and mitigate these 'hallucinations' related to format?

- A. Option B
- B. Option D
- C. Option A
- D. Option E
- E. Option C

Answer: A,B,C,E

Explanation:

Option A is correct because 'AI_COMPLETE Structured Outputs allows supplying a JSON schema via the 'response_format' argument, which defines the structure, data types, and constraints, ensuring responses conform to the schema and reducing post-processing. Option B is correct as it specifically states requirements for OpenAI (GPT) models when using 'response_format', including 'additionalProperties: false' and explicitly listing all properties in the 'required' field. Option C is correct because, for medium-to-complex tasks, adding 'Respond in JSON' to the prompt can further improve JSON adherence accuracy, even when 'response_format' is specified. Option D is correct as setting 'temperature' to 0 is recommended for the most consistent results, which is crucial for deterministic JSON outputs, regardless of task or model. Option E is incorrect because 'CLASSIFY_TEXT' is for categorizing text, not for validating JSON structure, making it an inappropriate tool for this task.

NEW QUESTION # 144

A data analyst is setting up a new Cortex Analyst-powered conversational app for business users. They want to understand how the "Suggested Questions" feature behaves under different semantic model configurations to ensure an optimal user experience. Which of the following statements accurately describe the behavior of the "Suggested Questions" feature in Cortex Analyst based on the semantic model configuration?

- A. When a semantic model contains a VQR, Cortex Analyst prioritizes returning up to five suggested questions from the VQR that are semantically similar to the user's input.
- B. In the absence of a VQR, Cortex Analyst uses underlying Large Language Models (LLMs) to generate up to three suggested questions, which are guaranteed to be answerable.
- C. If multiple verified queries in a VQR are marked with
-
- D. Setting the
-
- E. If the semantic model does not include a Verified Query Repository (VQR), Cortex Analyst will always return a blank list of suggested questions.

Answer: A,C

Explanation:

Cortex Analyst's 'Suggested Questions' feature operates in different modes. If a semantic model does not include a Verified Query Repository (VQR), Cortex Analyst uses Large Language Models (LLMs) to generate up to three suggested questions, which may not always be answerable. Therefore, option A is incorrect because it returns a blank list, and option D is incorrect because the

LLM-generated questions are not guaranteed to be answerable. When a semantic model has a VQR defined, Cortex Analyst suggests up to five questions from the VQR based on their similarity to the user's input, making option B correct. Furthermore, in Customizable Mode, if verified queries in the VQR are marked with

□, Cortex Analyst will return all of these flagged questions, regardless of their quantity or similarity to user input, making option E correct and option C incorrect.

NEW QUESTION # 145

A data application developer is building a Streamlit chat application within Snowflake. This application uses a RAG pattern to answer user questions about a knowledge base, leveraging a Cortex Search Service for retrieval and an LLM for generating responses. The developer wants to ensure responses are relevant, concise, and structured. Which of the following practices are crucial when integrating Cortex Search with Snowflake Cortex LLM functions like AI_COMPLETE for this RAG chatbot?

- A. For performance and cost optimization, it is always recommended to query Cortex Search and the LLM function within a single
- **B. Using the**
□
- C. The
□
- **D. To maintain conversational context in a multi-turn chat, the developer should pass all previous user prompts and model responses in the**
□
- E. The retrieved context from Cortex Search should be directly concatenated with the user's prompt as input to the

Answer: B,D

Explanation:

Option A is incorrect. The user's query is typically embedded (e.g., using to perform a similarity search against the Cortex Search Service. The 'retrieved documents' (context) are then passed to the 'AI COMPLETE function, not the embedding function itself. Option B is correct because to provide a stateful, conversational experience, all previous user prompts and model responses should be passed in the array to the 'COMPLETE or function. Option C is incorrect. While concatenation is a method, for better accuracy and control, the retrieved context should be integrated into a well-engineered prompt, often using tags or specific instructions, rather than just raw concatenation, to guide the LLM's response. Option D is correct because 'AI_COMPLETE Structured Outputs' allows you to supply a JSON schema that completion responses must follow, reducing the need for post-processing and enabling seamless integration with systems requiring deterministic responses. Option E is incorrect. While keeping processing within Snowflake is good for data governance, complex RAG pipelines often involve multiple distinct steps (query embedding, search, retrieval, LLM completion) that may benefit from a staged approach rather than a single monolithic SQL statement. The optimal approach depends on the specific complexity and performance requirements, and a single 'SELECT for the 'entire' RAG flow might not always be the most efficient or practical solution.

NEW QUESTION # 146

A new data analyst is trying to incorporate sentiment analysis using SNOWFLAKE. CORTEX. SENTIMENT within a Snowflake data pipeline that uses dynamic tables. They execute the following SQL to create a dynamic table for daily sentiment aggregation:

□ However, this operation fails. Which of the following is the most direct reason for the failure of this specific setup?

- **A. SNOWFLAKE. CORTEX. SENTIMENT and other Snowflake Cortex functions are currently incompatible with dynamic tables.**
- B. The warehouse my_analytics_wh is likely not a Snowpark-optimized warehouse, which is a requirement for Cortex functions within dynamic tables.
- C. The TARGET_LAG for dynamic tables must be explicitly set to '1 day' or longer when integrating with Cortex functions.
- D. The CORTEX_USER database role was not granted to the analyst's role, preventing the execution of Cortex functions.
- E. The review_content column, if containing non-English text, would cause the SENTIMENT function to fail outright rather than produce inaccurate results.

Answer: A

Explanation:

Option B is correct. Snowflake Cortex functions, including SNOWFLAKE .CORTEX. SENTIMENT, do not support dynamic tables. This is a fundamental limitation that would cause the CREATE DYNAMIC TABLE statement to fail when trying to

incorporate a Cortex function. While the 'CORTEX_USER' role is indeed required for calling Cortex AI functions, the direct failure in this scenario is due to the incompatibility with dynamic tables. Option C is incorrect as there's no specified 'TARGET_LAG' limitation. Option D is incorrect; Snowflake recommends using a smaller warehouse (no larger than MEDIUM) for Cortex functions, but a Snowpark-optimized warehouse is not a strict requirement, and larger warehouses do not increase performance. Option E is incorrect because 'SENTIMENT' is designed for English-language input text, and non-English text would likely lead to unexpected or inaccurate results, not a direct failure of the function call itself.

NEW QUESTION # 147

.....

BraindumpsIT keeps an eye on changes in the Snowflake SnowPro® Specialty: Gen AI Certification Exam exam syllabus and updates Snowflake GES-C01 exam dumps accordingly to make sure they are relevant to the latest exam topics. After making the payment for Snowflake GES-C01 dumps questions you'll be able to get free updates for up to 90 days. Another thing you will get from using the GES-C01 Exam study material is free to support. If you encounter any problem while using the GES-C01 prep material, you have nothing to worry about. The solution is closer to you than you can imagine, just contact the support team and continue enjoying your study with the SnowPro® Specialty: Gen AI Certification Exam preparation material.
