

SK0-005 Valid Practice Questions, Latest SK0-005 Exam Price

What's more, part of that It-Tests SK0-005 dumps now are free: https://drive.google.com/open?id=1doTFy4sG93YoiWt5wr8E0_p1H0EC1FrH

If you want to buy our SK0-005 training guide in a preferential price, that's completely possible. In order to give back to the society, our company will prepare a number of coupons on our SK0-005 learning dumps. And the number of our free coupon is limited. So you should click our website frequently. What's more, our coupon has an expiry date. You must use it before the deadline day. What are you waiting for? Come to buy our SK0-005 Practice Engine at a cheaper price!

CompTIA SK0-005 Exam Syllabus Topics:

Section	Weight	Objectives
Topic 1: Security and Disaster Recovery	24%	- Explain physical security concepts - Given a scenario, implement server hardening techniques - Given a scenario, implement backup and restore procedures - Explain logical security concepts - Summarize data security concepts - Explain disaster recovery and high availability concepts
Topic 2: Troubleshooting	28%	- Given a scenario, troubleshoot security issues - Given a scenario, troubleshoot hardware failures - Given a scenario, troubleshoot connectivity issues - Explain the troubleshooting methodology - Given a scenario, troubleshoot software failures - Given a scenario, troubleshoot storage failures
Topic 3: Server Hardware Installation and Management	18%	- Summarize power and cooling components - Given a scenario, install physical hardware - Given a scenario, deploy and manage storage - Given a scenario, configure and manage server components
Topic 4: Server Administration	30%	- Explain the purpose of virtualization and containerization - Given a scenario, perform server management tasks - Explain the purpose and operation of scripting - Given a scenario, configure networking - Given a scenario, configure security features - Given a scenario, install and configure an operating system

Latest SK0-005 Exam Price, SK0-005 Pass4sure Exam Prep

If you hope to get a job with opportunity of promotion, it will be the best choice chance for you to choose the SK0-005 study question from our company. Because our SK0-005 study materials have the enough ability to help you improve yourself and make you more excellent than other people. The SK0-005 Learning Materials from our company have helped a lot of people get the certification and achieve their dreams. And you also have the opportunity to contact with the SK0-005 test guide from our company.

CompTIA Server+ Certification Exam Sample Questions (Q508-Q513):

NEW QUESTION # 508

A storage engineer responds to an alarm on a storage array and finds the battery on the RAID controller needs to be replaced. However, the replacement part will not be available for 14 days.

The engineer needs to identify the impact of the failed battery on the system. Which of the following best describes the impact?

- A. The read performance will be impacted.
- B. The performance will not be impacted.
- C. The read and write performance will be impacted.
- D. The write performance will be impacted.

Answer: D

Explanation:

A RAID controller battery is used to protect the data in the cache memory of the controller in case of a power failure. The cache memory allows the controller to improve the write performance by buffering the data and writing it to the disk in an optimized way. However, if the battery fails, the controller will switch to write-through mode, which means it will write the data directly to the disk without caching. This will reduce the write performance and increase the latency of the system.

NEW QUESTION # 509

Several mobile users are reporting intermittent performance issues when attempting to access network shares on the file server. After some investigation, the server administrator notices the server resources are running at maximum capacity, even during non-peak usage times. A recent port scan of the network identified this server as having too many unnecessary ports open to the public. Which of the following is the most likely cause of the performance issues?

- A. A virus infection
- B. Improper privilege escalation
- C. A misconfigured firewall rule
- D. Incorrect share permissions for mobile users

Answer: A

Explanation:

The fact that the server is running at maximum capacity, combined with the open ports, suggests that the server may have been compromised by a virus infection. Malware can exploit unnecessary open ports, leading to resource exhaustion and performance issues. Virus infection (Answer C): Malware often exploits open ports and consumes system resources, leading to performance degradation.

NEW QUESTION # 510

A server administrator has received calls regarding latency and performance issues with a file server. After reviewing all logs and server features the administrator discovers the server came with four Ethernet ports, but only one port is currently in use. Which of the following features will enable the use of all available ports using a single IP address?

- A. Round robin
- B. Network address translation
- C. NIC teaming
- D. in-band management

Answer: C

Explanation:

Explanation

NIC teaming is a feature that allows the use of multiple network interface cards (NICs) as a single logical interface with a single IP address. It can improve the network performance, bandwidth, and redundancy of a server. Verified References: [NIC teaming], [Network interface card]

NEW QUESTION # 511

A server technician installs a new NIC on a server and configures the NIC for IP connectivity. The technician then tests the connection using the ping command. Given the following partial output of the ping and ipconfig commands:

```
ipconfig /all
```

```
IPv4 address: 192.168.1.5  
Subnet mask: 255.255.255.0  
Default gateway: 192.168.1.1
```

```
pinging 192.168.1.1 with 32 bytes of data:
```

```
Request timed out  
Reply from 192.168.1.1: bytes=32 time<1ms TTL=128  
Request timed out  
Reply from 192.168.1.1: bytes=32 time<1ms TTL=128
```

Which of the following caused the issue?

- A. DHCP misconfiguration
- **B. Duplicate IP address**
- C. Incorrect default gateway
- D. Incorrect routing table

Answer: B

Explanation:

Explanation

The ping command output shows that the NIC has an IP address of 192.168.1.100 and a default gateway of 192.168.1.1. However, when the technician tries to ping the default gateway, the reply comes from another IP address: 192.168.1.101. This means that there is another device on the network that has the same IP address as the default gateway, and it is responding to the ping request instead of the intended destination.

A duplicate IP address can cause network connectivity problems, such as packet loss, routing errors, or unreachable hosts. To resolve this issue, the technician should either change the IP address of the default gateway or the device that is conflicting with it, or use DHCP to assign IP addresses automatically and avoid conflicts.

The other options are not correct because they do not explain the ping output. An incorrect default gateway would cause no reply or a destination unreachable message, not a reply from a different IP address. A DHCP misconfiguration would cause an invalid or no IP address on the NIC, not a duplicate IP address on the network. An incorrect routing table would cause routing errors or unreachable destinations, not a reply from a different IP address.

NEW QUESTION # 512

An administrator is tasked with building an environment consisting of four servers that can each serve the same website. Which of the

following concepts is described?

- A. Load balancing
- B. Overprovisioning
- C. Direct access
- D. Network teaming

Answer: A

Explanation:

Load balancing is a technique used to distribute workloads evenly across multiple servers, ensuring no single server is overwhelmed. This is especially important in environments where high availability and reliability are critical, such as when multiple servers are serving the same website. By doing so, load balancing improves the responsiveness and availability of applications or websites. Load balancing refers to the process of distributing network or application traffic across multiple servers to ensure no single server becomes overwhelmed, thereby improving responsiveness and availability of applications or websites. In the scenario described, where four servers are set up to each serve the same website, the concept of load balancing is applied. This setup aims to distribute incoming requests evenly among the servers to maximize speed and capacity utilization while ensuring no one server is overburdened, which can lead to improved overall performance of the website. Options B, C, and D do not accurately describe the scenario of distributing traffic for the same website across multiple servers.

NEW QUESTION # 513

.....

We believe that the best brands are those that go beyond expectations. They don't just do the job – they go deeper and become the fabric of our lives. Therefore, as the famous brand, even though we have been very successful we have never satisfied with the status quo, and always be willing to constantly update the contents of our SK0-005 Exam Torrent. Decades of painstaking efforts have put us in the leading position of SK0-005 training materials compiling market, and the excellent quality of our SK0-005 guide torrent and high class operation system in our company have won the common recognition from many international customers for us.
