2026 SCR: High Hit-Rate Sustainability and Climate Risk Interactive Practice Exam

Our SCR exam materials can help you get the certificate easily. With our SCR study questions for 20 to 30 hours, we can claim that you can pass the exam by your first attempt. And our pass rate of the SCR learning quiz is high as 98% to 100%. You must muster up the courage to challenge yourself. It is useless if you do not prepare well. You must seize the good chances when it comes. Please remember you are the best. What you need is just our SCR training braindumps!

The SCR Certification Exam covers a range of topics related to sustainability and climate risk, including climate science, environmental policy, sustainable investing, and risk management. Candidates are expected to have a solid understanding of the basic principles and concepts in these areas, as well as the ability to apply them in real-world scenarios. SCR Exam is offered in a computer-based format and consists of 80 multiple-choice questions. Candidates have four hours to complete the exam.

GARP Sustainability and Climate Risk Sample Questions (Q80-Q85):

NEW QUESTION # 80

After launching new large-scale sites for engine testing, a global automaker prepares a GHG inventory report according to the GHG Protocol. An analyst on the sustainability team gathers data for the assessment. The analyst identifies emissions from production processes, previously deemed irrelevant at the corporate level, now constitute over 25% of company aggregated GHG emissions across plant sites.

Which GHG Protocol principle did the company analyst follow?

- A. Consistency
- B. Accuracy
- C. Completeness
- D. Transparency

Answer: C

NEW QUESTION # 81

To inform climate policy in a European country, a coalition of government scientists prepares a report on future climate conditions. Within the report, the scientists summarize how positive feedback loops accelerate the rate of climate change. Which feedback loop will the scientists most likely include in the coalition report?

- A. Thawing permafrost near polar regions absorbs CO₂ which slows global warming and increases thawing.
- B. Warmer air temperatures can hold higher amounts of water vapor, leading to higher temperatures and increased water vapor.
- C. Rising sea levels increase the total mass of global oceans, leading to increased oceanic carbon absorption and growing calcification for sea life.
- D. Melting sea ice increases solar energy reflection, which intensifies the albedo in polar regions and leads to more global warming.

Answer: B

NEW QUESTION # 82

A risk manager at an investment bank works on a climate disclosure project for a bank portfolio. To understand the climate impacts on the investment portfolio, the risk manager evaluates different metrics to measure climate risk exposure. The manager selects a metric that can be easily applied across asset classes.

While the metric is sensitive to outliers, calculating the metric is simple and easy to communicate to investors.

Which metric did the manager most likely select to measure climate risk exposure?

- A. Carbon intensity
- B. Carbon footprint
- C. Weighted average carbon intensity
- D. Total carbon emissions

Answer: C

NEW QUESTION # 83

A senior portfolio analyst at a global asset management firm performs a portfolio review to identify assets that may be affected by climate risk. Preliminary findings show the firm heavily invests in food and beverage companies with high climate risk exposure due to extreme temperatures and droughts. In a report to senior management, the analyst notes the firm can improve portfolio performance by examining physical risk, as the firm currently focuses primarily on transition risk.

Which approach to examining physical risk at the portfolio level should the analyst recommend?

- A. Downscaled global climate modeling
- B. "Warming potential" measurement on portfolios
- C. Temperature score methodology
- D. Best- and worst-in class of an index

Answer: D

NEW QUESTION # 84

A mid-size bank in Australia will implement scenario analysis as part of a risk assessment to measure climate risk. A risk manager in charge of this project reviews current practices among peers worldwide.

To align with common and well-established practices of financial firms, how will the risk manager implement scenario analysis to assess climate risk?

- A. Compare the likelihood of physical and transition risks
- B. Create inclusionary criteria for investments based on climate risk
- C. Examine portfolio-level exposures in various climate outcomes
- D. Provide ex-ante climate risk analysis to national regulators

Answer: C

NEW QUESTION # 85
