## ISQI CTFL-AT Exam Questions - Quick Tips To Pass [2026]

More and more people look forward to getting the CTFL-AT certification by taking an exam. However, the exam is very difficult for a lot of people. Especially if you do not choose the correct study materials and find a suitable way, it will be more difficult for you to pass the exam and get the CTFL-AT related certification. If you want to get the related certification in an efficient method, please choose the CTFL-AT Study Materials from our company. We can guarantee that the study materials from our company will help you pass the exam and get the certification in a relaxed and efficient method.

## ISQI ISTQB Certified Tester - Foundation Level Extension - Agile Tester Sample Questions (Q81-Q86):

**NEW QUESTION # 81**
Which agile development approach incorporates the following practices:
* a project is divided into iterations called sprints
* each sprint results in a potentially releasable/shippable product?

- A. Continuous Integration
- B. Kanban
- C. Extreme Programming
- D. Scrum

**Answer: D**

**NEW QUESTION # 82**
Which of the following describes the main purpose of a task management tool in agile projects?

- A. A task management tool is used by team members to share ideas and collaborate on assigned tasks.
- B. A task management tool allows developers to continuously integrate their code.
- C. A task management tool is used to store source code and automated tests.
- D. A task management tool is used to manage and track user stories, tests and other tasks.

**Answer: D**

**NEW QUESTION # 83**
Which tasks are typically performed by a tester on an Agile project?
1) Implementing test strategy.
2) Documenting business requirements.
3) Measuring and reporting test coverage.
4) Coaching development team in relevant aspects of testing.
5) Executing test-driven development tests.

- A. 2, 5
- B. 1, 3
- C. 1, 3, 4
- D. 2, 4, 5

**Answer: C**

Explanation:
A tester on an Agile project typically performs the following tasks12:
* Implementing test strategy: A tester helps to define and implement the test strategy for the Agile project, which includes the test approach, test levels, test types, test techniques, test tools, test environment, test data, test metrics, and test documentation.
* Measuring and reporting test coverage: A tester measures and reports the test coverage of the product features and quality attributes, such as functionality, usability, performance, security, etc. Test coverage can be expressed in terms of test cases, test scenarios, test sessions, test conditions, test data, code, etc.
* Coaching development team in relevant aspects of testing: A tester coaches the development team in relevant aspects of testing, such as test design, test execution, test automation, test-driven development, behavior-driven development, exploratory testing, etc. A tester also helps the development team to improve their testing skills and practices.
The following tasks are not typically performed by a tester on an Agile project:
* Documenting business requirements: Business requirements are usually documented by the product owner or the business analyst,

not by the tester. The tester may review and provide feedback on the business requirements, but the tester is not responsible for documenting them.

* Executing test-driven development tests: Test-driven development tests are usually executed by the developers, not by the tester. The tester may assist the developers in creating and reviewing the test- driven development tests, but the tester is not responsible for executing them.

Therefore, the correct answer is C, as it contains the tasks that are typically performed by a tester on an Agile project. References: ISTQB Foundation Level Agile Tester Extension Syllabus1, pages 14-15, 18-19, 22-23; ISTQB Agile Tester Sample Exam2, question 17.

## NEW QUESTION # 84
Which of the following allows a developer to define accurate unit tests focused on business needs?

- A. Design-Driven Development
- B. Behavior-Driven Development
- C. Test-Driven Development
- D. Acceptance Test-Driven Development

**Answer: D**

## NEW QUESTION # 85
Which of the following describes the main purpose of a task management tool in agile projects?

- A. A task management tool is used by team members to share ideas and collaborate on assigned tasks.
- B. A task management tool allows developers to continuously integrate their code.
- C. A task management tool is used to store source code and automated tests.
- D. A task management tool is used to manage and track user stories, tests and other tasks.

**Answer: D**

Explanation:
Explanation
A task management tool is a software application that helps agile teams plan, organize, and monitor their work. A task management tool typically allows the team to create, assign, prioritize, update, and track user stories, tests, and other tasks that are part of the agile project. A task management tool can also provide various views and reports to visualize the progress and status of the project, such as Kanban boards, burndown charts, velocity charts, etc. Some examples of task management tools are Jira, Trello, Asana, and Monday.com12345.
