

300-620 Guide Torrent, Exam 300-620 Cram

BONUS!!! Download part of VCE Dumps 300-620 dumps for free: https://drive.google.com/open?id=1C6Tt1v-aX6jakyT_cMcQELtZDmpmHvRx

We understand your enthusiasm of effective practice materials, because they are the most hopeful tools help us gain more knowledge with the least time to achieve success, and we have been in your shoes. Our 300-620 exam questions can help you achieve that dreams easily. Whatever you want to master about this exam, our experts have compiled into them for your reference. A growing number of exam candidates are choosing our 300-620 Exam Questions, why are you still hesitating? As long as you have make up your mind, our Implementing Cisco Application Centric Infrastructure study question is available in five minutes, so just begin your review now! This could be a pinnacle in your life.

Before you buy our product, you can download and try out it freely so you can have a good understanding of our 300-620 test prep. The page of our product provide the demo and the aim to provide the demo is to let the client understand part of our titles before their purchase and see what form the software is after the client open it. The client can visit the page of our product on the website. We guarantee to you our 300-620 Exam Materials can help you and you will have an extremely high possibility to pass the exam.

Exam 300-620 Cram - 300-620 Latest Braindumps Sheet

In some respects, it is a truth that professional certificates can show your capacity in a working environment. If you pay your limited time to practice with our 300-620 study braindumps, you can learn how to more effectively create value and learn more knowledge the exam want to test for you. We promise it is our common goal to get it and we are trustworthy materials company you cannot miss this time.

Cisco Implementing Cisco Application Centric Infrastructure Sample Questions (Q300-Q305):

NEW QUESTION # 300

Drag and drop the Cisco ACI Layer 4 to Layer 7 service insertion terms on the left to the correct descriptions on the right.

Answer:

Explanation:

NEW QUESTION # 301

An engineer is implementing an out-of-band (OOB) management access for the Cisco ACI fabric. The secure access must meet

these requirements:

* Only GUI and secure shell must be allowed to access the management interfaces of the ACIs.

* The only IP ranges that must be permitted to connect the fabric will be 10.10.10.0/24 and 192.168.15.0/24.

Which configuration set meets these requirements?

- A. Create an out-of-band EPG in the common tenant. Associate the external network instance profile with the OOB contract.
- B. Create an out-of-band EPG in the external management entity. Associate the management profile with the OOB contract.
- **C. Implement HTTPS and SSH protocol filters in the OOB contract. Add the required subnets to the external network instance profile.**
- D. Set up static IPs on the management interfaces from the required IP range. Add the required subnets to the external network instance profile.

Answer: C

Explanation:

The engineer is implementing out-of-band (OOB) management access for the Cisco ACI fabric with the following requirements:

Only GUI (HTTPS) and Secure Shell (SSH) must be allowed to access the management interfaces.

Only IP ranges 10.10.10.0/24 and 192.168.15.0/24 must be permitted to connect.

This requires configuring access control and restricting IP ranges for OOB management.

Requirement Analysis

OOB management in ACI is typically handled via the Management Tenant (mgmt) and an OOB contract to define allowed protocols and sources.

The external network instance profile defines the permitted IP ranges for external access.

Option Evaluation

A . Implement HTTPS and SSH protocol filters in the OOB contract. Add the required subnets to the external network instance profile:

An OOB contract can specify allowed protocols (HTTPS on port 443 and SSH on port 22) to restrict access to GUI and SSH only. Adding the subnets 10.10.10.0/24 and 192.168.15.0/24 to the external network instance profile limits the source IP ranges, meeting both requirements.

Reference:

B . Create an out-of-band EPG in the external management entity. Associate the management profile with the OOB contract:

This approach creates an EPG for OOB management, but it does not specify protocol filters (HTTPS/SSH) or IP range restrictions. The management profile alone does not enforce these requirements.

C . Set up static IPs on the management interfaces from the required IP range. Add the required subnets to the external network instance profile:

Assigning static IPs to management interfaces is a configuration step, but it does not enforce protocol restrictions (HTTPS/SSH) or limit source IP ranges via a contract. This is incomplete.

D . Create an out-of-band EPG in the common tenant. Associate the external network instance profile with the OOB contract:

The common tenant can host an OOB EPG, but this option lacks explicit protocol filtering (HTTPS/SSH) and relies on the external network instance profile, which may not fully address the GUI/SSH restriction.

Final Answer Justification

A is correct because it directly addresses both requirements: using an OOB contract to filter HTTPS and SSH protocols and adding the specified subnets to the external network instance profile to restrict IP ranges.

Primary Cisco Reference:

Cisco APIC Management Tenant Configuration Guide, "OOB Management Access." Cisco ACI Security Guide, "Contract-Based Access Control."

NEW QUESTION # 302

An engineer must connect Cisco ACI fabric using Layer 2 with external third-party switches. The third-party switches are configured using 802.1s protocol. Which two constructs are required to complete the task?

(Choose two.)

- A. spanning tree policy for mapping MST Instances to VLANs
- **B. MCP instance policy with administrative state disabled**
- **C. MCP policy with PDU per VLAN enabled**
- D. static binding of native VLAN in all existing EPGs
- E. dedicated EPG for native VLAN

Answer: B,C

NEW QUESTION # 303

Which description regarding the initial APIC cluster discovery process is true?

- A. The ACI fabric is discovered starting with the spine switches.
- **B. The APIC uses an internal IP address from a pool to communicate with the nodes.**
- C. Every switch is assigned a unique AV by the APIC.
- D. The APIC discovers the IP address of the other APIC controllers by using Cisco Discovery Protocol.

Answer: B

NEW QUESTION # 304

Which protocol does ACI use to securely save the configuration in a remote location?

- A. HTTPS
- B. FTP
- C. TFTP
- **D. SCP**

Answer: D
