Our website focus on helping candidates pass SAP certification exams with our Valid C_S4EWM_2023 Practice Questions and detailed test answers. The most reliable C_S4EWM_2023 dumps pdf are written by our professional IT experts who have rich experience in actual test. And you will be enjoyed one-year free updating after you make payment.

SAP Certified Associate - SAP S/4HANA Cloud Private Edition, Extended Warehouse Management Sample Questions (Q39-Q44):

NEW QUESTION # 39

What are characteristics of the early capacity check? Note: There are 2 correct answers to this question.

- A. It happens during the warehouse task creation
- B. It is only available when working with mobile devices
- C. It is based on capacities of bin types
- D. It is done during the actual putaway process

Answer: A,C

Explanation:

Comprehensive and Detailed In-Depth Explanation:

The early capacity check in SAP EWM ensures bins can accommodate stock before task execution. Option C ("It happens during the warehouse task creation") is correct as it occurs when tasks are generated, and option D ("It is based on capacities of bin types") is correct because it uses bin type capacity data, both configured in SPRO: SCM Extended Warehouse Management > Goods Receipt Process > Capacity Check. Option A (mobile devices) is incorrect as it's not device-specific, and option B (during putaway) is too late for an "early" check.

NEW QUESTION # 40

What do you use to control what is displayed on the mobile device? Note: There are 2 correct answers to this question.

- A. Presentation profile
- B. User profile
- C. Personalization profile
- D. Queue type

Answer: A,C

NEW QUESTION # 41

With SAP S/4HANA embedded EWM or EWM 9.5, you can skip certain document categories. Which document category combination is still mandatory?

- A. A production material request and a stock transfer
- **B. An outbound delivery order and an outbound delivery**
- C. An outbound delivery request and an outbound delivery
- D. An outbound delivery request and an outbound delivery order

Answer: B

Explanation:

Mandatory Document Categories

* Outbound Delivery Order and Outbound Delivery (D): This document flow remains mandatory as it represents the core process of shipping goods from a warehouse.

Excluded Options

* A (Outbound delivery request and delivery): This combination is part of planning but not mandatory.

* B (Production material request and stock transfer): Relevant for production processes but not a core outbound requirement.

* C (Delivery request and delivery order): Intermediate steps can be skipped in embedded EWM.

SAP S/4HANA Cloud Private Edition Reference

* Check Document Categories and Flows in EWM for more details.

NEW QUESTION # 42

Using embedded EWM, what options do you have for the goods receipt posting for external procurement? Note: There are 2 correct answers to this question.

- **A. Use the EWM Inbound Delivery to post goods receipt.**
- **B. Use the ERP Inbound Delivery to post goods receipt.**
- C. Use synchronous goods receipt where you post the GR in ERP.
- D. Use synchronous goods receipt where you post the GR in EWM.

Answer: A,B

Explanation:

Comprehensive and Detailed In-Depth Explanation:

In embedded EWM within SAP S/4HANA Cloud, Private Edition, goods receipt (GR) for external procurement can be posted using two primary methods. Option B ("Use the ERP Inbound Delivery to post goods receipt") is correct because the ERP inbound delivery (created in SAP ERP/S/4HANA MM) serves as the reference document, which is then replicated to EWM for warehouse processing. Option C ("Use the EWM Inbound Delivery to post goods receipt") is also correct because the inbound delivery in EWM, derived from the ERP document, is where the actual GR is confirmed and posted back to ERP via integration. Synchronous GR (options A and D) is not a standard feature in embedded EWM for external procurement, as the process relies on asynchronous communication between ERP and EWM via queued remote function calls (qRFC). The GR posting is finalized in ERP based on EWM confirmation, ensuring inventory alignment.

NEW QUESTION # 43

Which standard functions can be executed in the background when you enter an exception code in a radio frequency (RF) transaction? Note: There are 3 correct answers to this question.

- **A. Block a bin**
- B. Confirm warehouse order
- C. Cancel physical inventory document
- **D. Create bin replenishment**
- **E. Generate workflow process**

Answer: A,D,E

Explanation:

When entering an exception code in a Radio Frequency (RF) transaction in SAP EWM, standard functions are triggered in the

background to address specific scenarios or issues. These actions include:

- * Generate Workflow Process (A):
- * Exception handling can trigger a workflow process to notify or involve specific personnel for resolving the exception.
- * Workflows are useful for routing tasks or approvals automatically.
- * Create Bin Replenishment (B):
- * If the exception indicates a stock shortage, the system can automatically generate a bin replenishment request.
- * This ensures that the stock is replenished from reserve storage to the picking location.
- * Block a Bin (C):
- * In cases where a bin is damaged or contains incorrect stock, the system can block the bin automatically to prevent further operations.
- * This prevents the use of the bin until the issue is resolved.

Incorrect Options:

- * D: Confirming a warehouse order is not typically linked to exception codes.
- * E: Canceling a physical inventory document is a separate process and is not triggered by exception codes in RF transactions.
