

NSE6_SDW_AD-7.6 Latest Study Materials | Guaranteed NSE6_SDW_AD-7.6 Success

What's more, part of that PDFTorrent NSE6_SDW_AD-7.6 dumps now are free: <https://drive.google.com/open?id=1kfjYD3N8ZT4Qw39vrY0kszkOvkyHuwK->

In reaction to the phenomenon, therefore, the NSE6_SDW_AD-7.6 test material is reasonable arrangement each time the user study time, as far as possible let users avoid using our latest NSE6_SDW_AD-7.6 exam torrent for a long period of time, it can better let the user attention relatively concentrated time efficient learning. The NSE6_SDW_AD-7.6 practice materials in every time users need to master the knowledge, as long as the user can complete the learning task in this period, the NSE6_SDW_AD-7.6 test material will automatically quit learning system, to alert users to take a break, get ready for the next period of study.

With online test engine, you will feel the atmosphere of Fortinet valid test. You can set limit-time when you do the NSE6_SDW_AD-7.6 test questions so that you can control your time in NSE6_SDW_AD-7.6 practice exam. Online version can point out your mistakes and remind you to practice it every day. What's more, you can practice NSE6_SDW_AD-7.6 PdfTorrent anywhere and anytime.

Guaranteed Fortinet NSE6_SDW_AD-7.6 Success & NSE6_SDW_AD-7.6 Certification Exam Dumps

It is the right time to think about your professional career. The right path is to enroll in Fortinet NSE 6 - SD-WAN 7.6 Enterprise Administrator NSE6_SDW_AD-7.6 certification and start preparation with the assistance of Fortinet NSE6_SDW_AD-7.6 PDF dumps and practice test software. The Fortinet NSE6_SDW_AD-7.6 PDF Questions file and practice test software both are ready to download. Just pay an affordable Fortinet NSE6_SDW_AD-7.6 exam dumps charge and download files and software.

Fortinet NSE6_SDW_AD-7.6 Exam Syllabus Topics:

Topic	Details
Topic 1	<ul style="list-style-type: none"> Centralized management: This domain focuses on deploying and managing SD-WAN using FortiManager for centralized control. It includes implementing branch configuration deployment and using SD-WAN Manager with overlay orchestration to simplify large-scale network management.
Topic 2	<ul style="list-style-type: none"> Advanced IPsec: This section covers the deployment of advanced IPsec configurations within SD-WAN environments. It includes implementing hub-and-spoke IPsec topologies, configuring ADVPN, and supporting multihub, multiregion, and large-scale secure SD-WAN deployments.
Topic 3	<ul style="list-style-type: none"> SD-WAN setup: This domain covers how to deploy an enterprise SD-WAN environment by designing SD-WAN members and zones and configuring them for efficient traffic management. It also focuses on implementing Performance SLAs to monitor link quality and ensure applications use the best available path.

Topic 4	<ul style="list-style-type: none"> • SD-WAN troubleshooting: This domain explains how to diagnose and resolve issues related to SD-WAN operation. It includes troubleshooting SD-WAN rules, session behavior, routing problems, and ADVPN connectivity to maintain reliable network performance.
Topic 5	<ul style="list-style-type: none"> • Rules and routing: This section explains how to design and apply SD-WAN rules to control traffic steering across multiple WAN links. It also includes configuring SD-WAN routing to ensure proper path selection and connectivity between networks.

Fortinet NSE 6 - SD-WAN 7.6 Enterprise Administrator Sample Questions (Q86-Q91):

NEW QUESTION # 86

When a customer delegate the installation and management of its SD-WAN infrastructure to an MSSP, the MSSP usually keeps the hub within its infrastructure for ease of management and to share costly resources.

In which two situations will the MSSP install the hub in customer premises? (Choose two.)

- A. The administrator expects a large volume of traffic between the branches.
- B. The customer requires SIA with centralized breakout.
- C. The customer expects a large amount of VoIP traffic.
- D. The majority of the branch traffic is directed to a corporate data center.

Answer: A,D

NEW QUESTION # 87

Refer to the exhibits.

The exhibits show an SD-WAN event log, the member status, and the SD-WAN rule configuration. Which two conclusions can you draw from the information shown? (Choose two.)

- A. FortiGate updated the outgoing interface list on the rule so it prefers port2.
- B. The administrator configured the service ID 1 with the highest priority member for port2.
- C. Port2 has a lower latency than port1.
- D. The administrator configured the SD-WAN rule ID 1 with the default strategy mode.

Answer: A,C

Explanation:

The SD-WAN rule (config service edit 1) is configured with set mode priority. This means the rule selects the best interface based on a defined performance metric, as opposed to a simple static priority or SLA. The event log (image_41cfb5.png) shows Metric latency and Message Service prioritized by performance metric will be redirected in sequence order. This indicates that the rule is using latency to determine the preferred member.

Given that the log message is about a change, and the most logical reason for a change in a priority mode is that a different member is now the best performer, it implies that the latency on port2 has become lower than that on port1.

The log message Service prioritized by performance metric will be redirected in sequence order confirms that FortiGate is changing the member being used for this service. Because the mode is priority, FortiGate dynamically selects the member that currently meets the best performance criteria, which in this case is latency. The log implies a new member has been selected as the most optimal, and with the default configuration, the members are sorted based on their performance, so the outgoing interface list is effectively updated to prefer the new best-performing member (port2).

NEW QUESTION # 88

(Refer to the exhibit.)

An SD-WAN zone configuration on the FortiGate GUI is shown.

What can you conclude about the zone and member configuration on this device? Choose one answer.)

- A. The WAN2 zone contains no member.
- B. You can delete the virtual-wan-link zone.

- C. You can delete the WAN1 zone.
- D. You can add the member B-125 to the WAN3 zone and keep it as a member of the Test zone.

Answer: A

Explanation:

From the SD-WAN Zones view in the FortiGate GUI:

* virtual-wan-link is the default SD-WAN zone. This zone is system-defined and cannot be deleted, which makes option A incorrect.

* The WAN2 zone is displayed without any expandable members beneath it, indicating that no SD-WAN members are currently assigned to the WAN2 zone. This directly supports option B.

* A zone can be deleted only if it has no members and is not system-defined, but the exhibit does not indicate that WAN1 is eligible for deletion. Therefore, option C cannot be concluded from the information shown.

* In FortiOS SD-WAN, an SD-WAN member can belong to only one SD-WAN zone at a time. A member such as B-125 cannot be assigned to both the WAN3 zone and the Test zone simultaneously, which makes option D incorrect.

NEW QUESTION # 89

Refer to the exhibits.

The exhibits show the configuration for SD-WAN performance. SD-WAN rule, the application IDs of Facebook and YouTube along with the firewall policy configuration and the underlay zone status.

Which two statements are true about the health and performance of SD-WAN members 3 and 4? (Choose two.)

- A. Encrypted traffic is not used for the performance measurement.
- B. Only related TCP traffic is used for performance measurement.
- C. FortiGate identifies the member as dead when there is no Facebook and YouTube traffic passing through the member.
- D. The performance is an average of the metrics measured for Facebook and YouTube traffic passing through the member.

Answer: C,D

NEW QUESTION # 90

Refer to the exhibit.

Which two conclusions can you draw from the output shown? (Choose two.)

- A. UDP traffic destined to the subnet 10.22.0.0/24 matches a policy route.
- B. One SD-WAN rule allows traffic load balancing.
- C. One SD-WAN rule is defined with application categories as the destination.
- D. UDP traffic destined to the subnet 10.22.0.0/24 matches a manual SD-WAN rule.

Answer: A,C

Explanation:

One SD-WAN rule is defined with application categories as the destination # The diagnose output shows application control matches such as Microsoft.Portal, Operational.Technology, and Social.Media, confirming that SD-WAN rules are using application categories as destinations.

UDP traffic destined to the subnet 10.22.0.0/24 matches a policy route # The first entry (id=1) shows protocol=17 (UDP) with destination 10.22.0.0/24, confirming this traffic is handled by a policy route instead of an SD-WAN rule.

NEW QUESTION # 91

.....

It is universally accepted that the exam is a tough nut to crack for the majority of candidates, but the related NSE6_SDW_AD-7.6 certification is of great significance for workers in this field so that many workers have to meet the challenge. Fortunately, you need not to worry about this sort of question any more, since you can find the best solution in this website--our NSE6_SDW_AD-7.6 Training Materials. With our continued investment in technology, people and facilities, the future of our company has never looked so bright. with our excellent NSE6_SDW_AD-7.6 exam questions, you will pass the NSE6_SDW_AD-7.6 exam successfully.
