AZ-104 Minimum Pass Score Will Be Your Reliable Support to Pass Microsoft Azure Administrator

As you can find on the website, there are three versions of AZ-104 study materials that are also very useful for reading: the PDF, Software and APP online. For example, you can use the APP version of AZ-104 real exam in a web-free environment. Of course, the premise is that you have used it once before in a networked environment. This will save you a lot of traffic. This advantage of AZ-104 Study Materials allows you to effectively use all your fragmentation time.

Microsoft Azure Administrator Sample Questions (Q249-Q254):

NEW QUESTION # 249

You need to ensure that VM1 can communicate with VM4. The solution must minimize administrative effort. What should you do?

- A. Assign VM4 an IP address of 10.0.1.5/24.
- B. Create an NSG and associate the NSG to VM1 and VM4.
- C. Create a user-defined route from VNET1 to VNET3.
- D. Establish peering between VNET1 and VNET3.

Answer: D

Explanation:

Topic 1, Litware, inc.

Existing Environment

The network contains an Active Directory forest named Litware.com. All domain controllers are configured as DNS servers and host the Litware.com DNS zone.

Litware has finance, human resources, sales, research, and information technology departments. Each department has an organizational unit (OU) that contains all the accounts of that respective department. All the user accounts have the department attribute set to their respective department. New users are added frequently.

Litware.com contains a user named User1.

All the offices connect by using private links.

Litware has data centers in the Montreal and Seattle offices. Each data center has a firewall that can be configured as a VPN device.

All infrastructure servers are virtualized. The virtualization environment contains the servers in the following table.

□ Litware uses two web applications named App1 and App2. Each instance on each web application requires 1GB of memory.

The Azure subscription contains the resources in the following table.

□ The network security team implements several network security groups (NSGs).

Planned Changes

Litware plans to implement the following changes:

- * Deploy Azure ExpressRoute to the Montreal office.
- * Migrate the virtual machines hosted on Server1 and Server2 to Azure.
- * Synchronize on-premises Active Directory to Azure Active Directory (Azure AD).
- * Migrate App1 and App2 to two Azure web apps named webApp1 and WebApp2.

Technical Requirements

Litware must meet the following technical requirements:

- * Ensure that WebApp1 can adjust the number of instances automatically based on the load and can scale up to five instances*.
- * Ensure that VM3 can establish outbound connections over TCP port 8080 to the applications servers in the Montreal office.
- * Ensure that routing information is exchanged automatically between Azure and the routers in the Montreal office.
- * Enable Azure Multi-Factor Authentication (MFA) for the users in the finance department only.
- * Ensure that webapp2.azurewebsites.net can be accessed by using the name app2.Litware.com.
- * Connect the New York office to VNet1 over the Internet by using an encrypted connection.
- * Create a workflow to send an email message when the settings of VM4 are modified.
- * Create a custom Azure role named Role1 that is based on the Reader role.
- * Minimize costs whenever possible.

NEW QUESTION # 250

Your company has a Microsoft Azure subscription.

The company has datacenters in Los Angeles and New York.

You are configuring the two datacenters as geo-clustered sites for site resiliency.

You need to recommend an Azure storage redundancy option.

You have the following data storage requirements:

- * Data must be stored on multiple nodes.
- * Data must be stored on nodes in separate geographic locations.
- * Data can be read from the secondary location as well as from the primary location Which of the following Azure stored redundancy options should you recommend?

- A. Geo-redundant storage
- B. Zone-redundant storage
- C. Locally redundant storage
- D. **Read-only geo-redundant storage**

Answer: D

Explanation:

Explanation

RA-GRS allows you to have higher read availability for your storage account by providing "read only" access to the data replicated to the secondary location. Once you enable this feature, the secondary location may be used to achieve higher availability in the event the data is not available in the primary region. This is an

"opt-in" feature which requires the storage account be geo-replicated.

<https://docs.microsoft.com/en-us/azure/storage/common/storage-redundancy>

NEW QUESTION # 251

You have an availability set named AS1 that contains three virtual machines named VM1, VM2, and VM3.

You attempt to reconfigure VM1 to use a larger size. The operation fails and you receive an allocation failure message.

You need to ensure that the resize operation succeeds.

Which three actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation

Action 1: Stop VM1, VM2 and VM3

If the VM you wish to resize is part of an availability set, then you must stop all VMs in the availability set before changing the size of any VM in the availability set. The reason all VMs in the availability set must be stopped before performing the resize operation to a size that requires different hardware is that all running VMs in the availability set must be using the same physical hardware cluster. Therefore, if a change of physical hardware cluster is required to change the VM size then all VMs must be first stopped and then restarted one-by-one to a different physical hardware clusters.

Action 2: Resize VM1

Action 3: Start VM1, VM2, and VM3

NEW QUESTION # 252

You have an Azure Active Directory (Azure AD) tenant.

You need to create a conditional access policy that requires all users to use multi-factor authentication when they access the Azure portal.

Which three settings should you configure? To answer, select the appropriate settings in the answer area.

Answer:

Explanation:

Explanation

Reference:

<https://docs.microsoft.com/en-us/azure/active-directory/conditional-access/app-based-mfa>

NEW QUESTION # 253

Your network is configured as shown in the following exhibit.

The firewalls are configured as shown in the following table.

Prod1 contains a vCenter server.

You install an Azure Migrate Collector on Test1.

You need to discover the virtual machines.

Which TCP port should be allowed on each firewall? To answer, drag the appropriate ports to the correct firewalls. Each port may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.

NOTE: Each correct selection is worth one point.

Answer:
