MuleSoft MCD-Level-1 Reliable Test Guide | MCD-Level-1 Exam Duration

The itPass4sure is the top-rated website that offers real MuleSoft Certified Developer - Level 1 (Mule 4) MCD-Level-1 exam dumps to prepare for the MuleSoft MCD-Level-1 test. itPass4sure has made these latest MCD-Level-1 practice test questions with the cooperation of the world's highly experienced professionals. Countless MCD-Level-1 Exam candidates have used these latest MCD-Level-1 exam dumps to prepare for the MuleSoft MCD-Level-1 certification exam and they all got success with brilliant results.

Understanding functional and technical aspects of MuleSoft Certified Developer - Level 1 Building API implementation interfaces

The following will be asked from you in the exam:

- Building API implementation interfaces

- Manually create a RESTful interface for a Mule application
- Generate a REST Connector from a RAML specification
- Describe how requests are routed through flows generated by APIkit
- Describe the features and benefits of APIkit

MuleSoft Certified Developer - Level 1 (Mule 4) Sample Questions (Q199-Q204):

NEW QUESTION # 199

A company has an API to manage departments, with each department identified by a unique deptId. The API was built with RAML according to MuleSoft best practices.

What is valid RAML to specify a method to update the details for a specific department?

- A)
- ☐ B)
- ☐ C)
- ☐ D)

- A. Option C
- B. Option A
- C. Option B
- D. Option D

Answer: D

Explanation:

URI parameter is basically used to identify a specific resource or resources

* Here we want to update details about specific department, so question is asking 'How to use URI parameter' in RAML

* Correct answer is

/departments:

/{deptId}:

patch:

NEW QUESTION # 200

Refer to the exhibits. In the choice router, the When expression for the domestic shipping route is set to "[payload= 'FR']".

What is the output of logger after the execution of choice router is completed?

☐

- A. A dataweave syntax error
(Correct)
- B. "Domestic"
*
- C. "US"
*
- D. "International"
*

Answer: A

Explanation:

To compare, DataWeave syntax is "[payload == 'FR']". In this case only one = is used so it will give syntax error.

NEW QUESTION # 201

Refer to the exhibits.

☐

The Validation component in the Try scope throws an error.

What response message is returned to a client request to the main flow's HTTP Listener?

The Validation component in the Try scope throws an error. What response message is returned to a client request to the main flow's HTTP Listener?

- **A. Validation Error**
- B. Error - Try scope
- C. Success - main flow
- D. Error - main flow

Answer: A

NEW QUESTION # 202

A Scatter-Gather processes three separate HTTP requests. Each request returns a Mule event with a JSON payload. What is the final output of the Scatter-Gather?

- **A. An Object containing all three Mule event Objects**
- B. An Array of the three Mule event Objects
- C. An Object containing all three JSON payload Objects
- D. An Array of the three JSON payload Objects

Answer: A

Explanation:

Correct answer is An Object containing all three Mule event Objects

The Scatter-Gather component is a routing event processor that processes a Mule event through different parallel processing routes that contain different event processors. Each route receives a reference to the Mule event and executes a sequence of one or more event processors. Each of these routes uses a separate thread to execute the event processors, and the resulting Mule event can be either the same Mule event without modifications or a new Mule event with its own payload, attributes, and variables. The Scatter-Gather component then combines the Mule events returned by each processing route into a new Mule event that is passed to the next event processor only after every route completes successfully.

The Scatter-Gather component executes each route in parallel, not sequentially. Parallel execution of routes can greatly increase the efficiency of your Mule application and may provide more information than sequential processing.

Sample output is as below

MuleSoft Documentation reference : <https://docs.mulesoft.com/mule-runtime/4.3/scatter-gather-concept>

NEW QUESTION # 203

Refer to the exhibits.

A JSON payload is set in the Set Payload transformer.

What is logged by the Logger?

- A. "Object"
- **B. "JSON"**
- C. "String"
- D. "Array"

Answer: B

NEW QUESTION # 204
