There are some main features of our products and we believe you will be satisfied with our PCNSE test questions. Our study materials have enough confidence to provide the best PCNSE exam torrent for your study to pass it. With many years work experience, we have fast reaction speed to market change and need. In this way, we have the latest PCNSE Guide Torrent. You don't worry about that how to keep up with the market trend, just follow us.

The PCNSE Certification is a valuable credential for security professionals who work with Palo Alto Networks' products. It demonstrates that the holder has a deep understanding of the company's technologies and can effectively deploy and manage them in a variety of environments. Additionally, PCNSE Certification holders are eligible for various benefits, including access to the Palo Alto Networks Certified Professional Community and invitations to exclusive events and training opportunities.

Palo Alto Networks PCNSE (Palo Alto Networks Certified Security Engineer) certification is a highly respected credential in the cybersecurity industry. Palo Alto Networks Certified Network Security Engineer Exam certification is awarded to individuals who have demonstrated their expertise in designing, deploying, configuring, maintaining, and troubleshooting the Palo Alto Networks next-generation firewall technology. Palo Alto Networks Certified Network Security Engineer Exam certification exam covers the latest PAN-OS 10.0 release and provides a comprehensive assessment of an individual's knowledge and skills in network security.

If you face any hitch while using the Palo Alto Networks PCNSE practice exam software of itPass4sure, contact our customer support. Our team is available for the assistance of Palo Alto Networks PCNSE updated exam dumps users. Many candidates of the PCNSE examination pay extra money because Palo Alto Networks weakens the content of the test.

Palo Alto Networks Certified Security Engineer (PCNSE) certification is a highly sought-after credential for network security professionals who want to demonstrate their expertise in securing complex networks. Palo Alto Networks Certified Network Security Engineer Exam certification exam covers the skills and knowledge required to design, deploy, configure, maintain, and troubleshoot Palo Alto Networks' next-generation firewalls and associated technologies. The latest version of the exam, PCNSE PAN-OS 10.0, validates the candidates' ability to secure networks using the latest version of Palo Alto Networks' operating system.

## Palo Alto Networks Certified Network Security Engineer Exam Sample Questions (Q193-Q198):

### NEW QUESTION # 193

Refer to the exhibit.

A web server in the DMZ is being mapped to a public address through DNAT. Which Security policy rule will allow traffic to flow to the web server?

- A. Untrust (any) to DMZ (1. 1. 1. 100), web browsing - Allow
- B. Untrust (any) to DMZ (10. 1. 1. 100), web browsing - Allow
- C. Untrust (any) to Untrust (10. 1.1. 100), web browsing - Allow
- D. Untrust (any) to Untrust (1. 1. 1. 100), web browsing - Allow

**Answer: A**

Explanation:

<https://docs.paloaltonetworks.com/pan-os/10-0/pan-os-admin/networking/nat/nat-policy-rules/nat-policy-overview.html>

<https://docs.paloaltonetworks.com/pan-os/8-0/pan-os-admin/networking/nat/nat-configuration-examples/destination-nat-exampleone-to-many-mapping>

### NEW QUESTION # 194

When you troubleshoot an SSL Decryption issue, which PAN-OS CLI command do you use to check the details of the Forward Trust certificate, Forward Untrust certificate, and SSL Inbound Inspection certificate?

- A. debug dataplane show ssl-decrypt ssl-certs
- B. show system setting ssl-decrypt certs
- C. show system setting ssl-decrypt certificate-cache
- D. show system setting ssl-decrypt certificate

**Answer: A**

Explanation:

To troubleshoot SSL Decryption issues and check the details of the Forward Trust certificate, Forward Untrust certificate, and SSL Inbound Inspection certificate, the PAN-OS CLI command debug dataplane show ssl-decrypt ssl-certs is used. This command provides detailed information about the SSL certificates involved in decryption and inspection processes, allowing administrators to verify certificate validity, issuer details, and other critical parameters. Understanding the certificate details is crucial in diagnosing issues related to SSL decryption, such as certificate validation errors or misconfigurations that could lead to decryption failures.

### NEW QUESTION # 195

A network security administrator has an environment with multiple forms of authentication. There is a network access control system in place that authenticates and restricts access for wireless users, multiple Windows domain controllers, and an MDM solution for company-provided smartphones. All of these devices have their authentication events logged.

Given the information, what is the best choice for deploying User-ID to ensure maximum coverage?

- A. Syslog listener
- B. captive portal
- C. agentless User-ID with redistribution
- D. standalone User-ID agent

**Answer: D**

Explanation:

Explanation

A syslog listener is a User-ID agent that listens for syslog messages from network devices that contain user mapping information, such as network access control systems, domain controllers, or MDM solutions. By configuring a syslog listener on the firewall or Panorama and specifying the syslog format and filters, User-ID can parse the syslog messages and extract user mapping information from multiple sources. Agentless User-ID with redistribution is a method of using an existing firewall as a User-ID agent that redistributes user mappings to other firewalls or Panorama. This method does not involve syslog messages. A standalone User-ID agent is a software application that runs on a Windows server and collects user mappings from Active Directory servers or other sources. This method requires installing and managing a separate agent software. A captive portal is a web page that prompts users to authenticate before accessing certain network resources. This method does not involve syslog messages. References:

#### NEW QUESTION # 196

Refer to exhibit.

□ An organization has Palo Alto Networks NGFWs that send logs to remote monitoring and security management platforms. The network team has reported excessive traffic on the corporate WAN.

How could the Palo Alto Networks NGFW administrator reduce WAN traffic while maintaining support for all existing monitoring platforms?

- A. Forward logs from firewalls only to Panorama and have Panorama forward logs to other external services.
- B. Any configuration on an M-500 would address the insufficient bandwidth concerns.
- **C. Configure log compression and optimization features on all remote firewalls.**
- D. Forward logs from external sources to Panorama for correlation, and from Panorama send them to the NGFW.

**Answer: C**

#### NEW QUESTION # 197

For which two functions is the management plane responsible? (Choose two.)

- A. Reassembling packets
- **B. Forwarding logs**
- **C. Answering HTTP requests**
- D. Protocol decoding

**Answer: B,C**
