

Free Integration-Architect Brain Dumps 100% Pass | Latest Salesforce Certified Integration Architect Valid Exam Practice Pass for sure

BTW, DOWNLOAD part of Exams4Collection Integration-Architect dumps from Cloud Storage: <https://drive.google.com/open?id=15cfREXb7gHPPKf64VYnLUCF8ANO03DZh>

Please believe that our company is very professional in the research field of the Integration-Architect training questions, which can be illustrated by the high passing rate of the examination. Despite being excellent in other areas, we have always believed that quality and efficiency should be the first of our Integration-Architect Real Exam. For our Integration-Architect study materials, the high passing rate as 98% to 100% is the best test for quality and efficiency.

The Salesforce Integration-Architect Exam is intended for individuals who have experience working with Salesforce, including knowledge of data modeling, security, and user interface design. Salesforce Certified Integration Architect certification exam covers a wide range of topics, including integration architecture, integration patterns, data integration, and API integration. Candidates are also tested on their knowledge of integration security and performance optimization.

Features of Salesforce Integration-Architect Desktop Practice Exam Software

With great outcomes of the passing rate upon to 98-100 percent, our Integration-Architect practice materials are totally the perfect ones. We never boost our achievements, and all we have been doing is trying to become more effective and perfect as your first choice, and determine to help you pass the Integration-Architect practice exam as efficient as possible. Our Integration-Architect

practice materials are your optimum choices which contain essential know-hows for your information. So even trifling mistakes can be solved by using our Integration-Architect practice materials, as well as all careless mistakes you may make. If you opt for these Integration-Architect practice materials, it will be a sheer investment. You will get striking by these viable ways.

Salesforce Certified Integration Architect Sample Questions (Q10-Q15):

NEW QUESTION # 10

A company has an external system that processes and tracks orders. Sales reps manage their leads and opportunity pipeline in Salesforce. In the current state, the two systems are disconnected and processing orders requires a lot of manual entry on sales rep part. This creates delays in processing orders and incomplete data due to manual entry.

As a part of modernization efforts, the company decided to integrate Salesforce and the order management system. The following technical requirements were identified:

1. Orders need to be created in real time from salesforce
2. Minimal customization*, and code should be written due to a tight timeline and lack of developer resources
3. Sales reps need to be able to see order history and be able to see most up to date information on current order status.
4. Managers need to be able to run reports in Salesforce to see daily and monthly order volumes and fulfillment timelines.
5. The legacy system is hosted on premise and is currently connected to the Enterprise Service Bus (ESB). The ESB is flexible enough to provide any methods and connection types needed by salesforce team.
6. There are 1000 sales reps. Each user processes/creates on average 15 orders per shift. Most of the orders contain 20-30-line items.

How should an integration architect integrate the two systems based on the technical requirements and system constraints?

- A. Use Salesforce big object, SOAP API and Dataloader.
- B. Use Salesforce external object and OData connector.
- C. Use Salesforce standard object, REST API and ETL.
- **D. Use Salesforce custom object, custom REST API and ETL.**

Answer: D

Explanation:

Explanation

Using Salesforce custom object, custom REST API and ETL is a better solution than using Salesforce standard object, REST API and ETL. A custom object can store the order information and provide more flexibility and control over the data model, validation rules, triggers, etc. A custom REST API can be used to create orders in real time from Salesforce, using the ESB as a proxy to communicate with the legacy system. An ETL tool can be used to sync the order history and status from the legacy system to Salesforce, using the last modified date as a filter. This way, sales reps can see the order history and the most up-to-date information on current order status, and managers can run reports on order volumes and fulfillment timelines. A standard object, such as Order, may not meet all the business requirements and may require more customization than a custom object.

A standard REST API may not provide enough security and error handling for creating orders in real time.

NEW QUESTION # 11

Northern Trail Outfitters needs to use Shield Platform Encryption to encrypt social security numbers in order to meet a business requirement.

Which two considerations should an Integration Architect do prior to the implementation of Shield Platform Encryption?

Choose 2 answers

- A. Encrypt the data using the most current key.
- **B. Encrypt all the data so that it is secure.**
- C. Use Shield Platform Encryption as a user authentication or authorization tool.
- **D. Review shield platform encryption configurations.**

Answer: B,D

Explanation:

Explanation

The considerations that an Integration Architect should do prior to the implementation of Shield Platform Encryption are:

Review shield platform encryption configurations.

Encrypt all the data so that it is secure.

Shield Platform Encryption is a feature that allows you to encrypt sensitive data at rest in Salesforce, such as social security numbers,

without compromising critical platform functionality. Before implementing Shield Platform Encryption, you should review the shield platform encryption configurations, such as the encryption key management, the encryption policy, and the encrypted fields and files. You should also encrypt all the data that is subject to encryption, not just the data using the most current key. Encrypting all the data ensures that your data is secure and compliant with your business requirements. Encrypting the data using the most current key is not a valid consideration because Shield Platform Encryption uses a deterministic encryption scheme that does not allow you to rotate or re-encrypt your data with a new key. Using Shield Platform Encryption as a user authentication or authorization tool is not a valid consideration because Shield Platform Encryption is not designed for that purpose. Shield Platform Encryption only encrypts data at rest, not in transit or in use.

NEW QUESTION # 12

A subscription-based media company's system landscape forces many subscribers to maintain multiple accounts and to login more than once. An Identity and Access Management (IAM) system, which supports SAML and OpenId, was recently implemented to improve their subscriber experience through self-registration and Single Sign-On (SSO).

The IAM system must integrate with Salesforce to give new self-service customers instant access to Salesforce Community Cloud. Which two requirements should the Salesforce Community Cloud support for self-registration and SSO?

Choose 2 answers

- A. OpenId Connect Authentication Provider and Registration Handler
- B. SAML SSO and just-in-time provisioning
- C. SAML SSO and Registration Handler
- D. OpenId Connect Authentication Provider and just-in-time provisioning

Answer: A,B

Explanation:

The Salesforce Community Cloud should support OpenId Connect Authentication Provider and Registration Handler, and SAML SSO and just-in-time provisioning for self-registration and SSO. OpenId Connect is a protocol that allows users to authenticate with an external identity provider and access Salesforce resources. A registration handler is a class that implements the Auth.RegistrationHandler interface and defines how to create new users or update existing users in Salesforce from the information received from the identity provider. SAML SSO is a protocol that allows users to log in to Salesforce with a single credential from an identity provider. Just-in-time provisioning is a feature that allows creating or updating user accounts in Salesforce based on SAML assertions.

NEW QUESTION # 13

Northern Trail Outfitters uses a custom Java application to display code coverage and test results for all of their enterprise applications and is planning to include Salesforce as well.

Which Salesforce API should an Integration Architect use to meet the requirement?

- A. SOAP API
- B. Analytics REST API
- C. Metadata API
- D. Tooling API

Answer: D

Explanation:

Explanation

Option D is correct because Tooling API is the Salesforce API that can be used to retrieve code coverage and test results for Apex classes and triggers. Tooling API provides REST and SOAP interfaces to access metadata about code, execute tests, and get test results¹² Option A is incorrect because SOAP API is a Salesforce API that can be used to create, retrieve, update, or delete records, but not to get code coverage and test results. SOAP API uses a WSDL file to define the parameters for accessing data through the API³ Option B is incorrect because Analytics REST API is a Salesforce API that can be used to access data from reports and dashboards, but not from code coverage and test results. Analytics REST API provides a programmatic way to interact with analytics features such as lenses, datasets, and dashboards⁴ Option C is incorrect because Metadata API is a Salesforce API that can be used to retrieve, deploy, create, update, or delete customization information, such as custom object definitions and page layouts, but not code coverage and test results. Metadata API is mainly used for development tools or backup tools⁵ References: 1: Introducing Tooling API 2: Tooling API Examples 3: SOAP API Developer Guide 4: Analytics REST API Developer Guide 5:

NEW QUESTION # 14

Northern Trail Outfitters (NTO) has recently changed its Corporate Security Guidelines. The guidelines require that all cloud applications pass through a secure firewall before accessing on-premise resources. NTO is evaluating middleware solutions to integrate cloud applications with on-premise resources and services.

Which consideration should an integration architect evaluate before choosing a middleware solution?

- A. The middleware solution enforces the OAuth security protocol.
- **B. An API Gateway component is deployable behind a Demilitarized Zone (DMZ) or perimeter network.**
- C. The middleware solution is able to interface directly with databases via an Open Database Connectivity (ODBC) connection string.

Answer: B

NEW QUESTION # 15

.....

You can increase your competitive force in the job market if you have the certificate. Integration-Architect exam torrent of us will offer an opportunity like this. If you choose us, we will help you pass the exam just one time. Integration-Architect exam torrent of us is high quality and accuracy, and you can use them at ease. Besides, we offer you free demo to have a try before buying, and we have free update for 365 days after purchasing. The update version for Integration-Architect Exam Dumps will be sent to your email automatically.
