2026 ACA-100 Reliable Test Price | Newest 100% Free Valid ACA-100 Test Cost

Will you feel nervous when you are in the exam, and if you do, you can try our exam dumps.ACA-100 Soft test engine can stimulate the real environment, through this , you can know the procedure of the real exam, so that you can release your nervous . And you can build up your confidence when you face the real exam. Besides, ACA-100 Exam Dumps of us offer you free update for one year after purchasing, and our system will send the latest version to you automatically. We have online and offline chat service stuff, and if you have any questions, just have chat with them.

Appian Certified Analyst Sample Questions (Q24-Q29):

NEW QUESTION # 24

Which of the following is a key responsibility of a Product Owner in an Agile project?

- A. Facilitating daily stand-up meetings
- **B. Prioritizing the product backlog**
- C. Writing code for the application
- D. Designing the user interface

Answer: B

NEW QUESTION # 25

In Appian, what is the purpose of a process model?

- A. To define the look and feel of the user interface
- B. To create a database schema
- C. To manage user permissions within the application
- **D. To automate business workflows by defining sequences of tasks**

Answer: D

NEW QUESTION # 26

Which one of the following Appian object combinations allows you to directly access and use data from the Appian database?

- A. A process model that uses an Export to Excel smart service
- B. An interface object with an integration call
- **C. An expression rule with a query**
- D. An expression rule with an integration call

Answer: C

Explanation:

In Appian, the combination of an expression rule with a query allows you to directly access and use data from the Appian database. Expression rules are used to define business logic, while queries are used to retrieve data from the database.

Expression Rule with a Query:

An expression rule can be used to execute a query against the Appian database to retrieve data.

This combination allows you to filter, sort, and manipulate the data retrieved directly from the database within your application logic. The `a!queryEntity()` function is commonly used within an expression rule to fetch data from a specific entity in the database.

Why Not Other Options?:

A . An expression rule with an integration call: This option is used for retrieving data from external systems, not directly from the Appian database.

C . A process model that uses an Export to Excel smart service: This is used for exporting data to Excel but does not directly access the database for querying purposes.

D . An interface object with an integration call: This combination is also used for interfacing with external systems rather than directly accessing the Appian database.

Implementation in Appian:

Define an expression rule that uses `a!queryEntity()` to fetch data from a specific table or view in the Appian database.

The query can be customized with filters, sorting, and paging to retrieve the exact data needed for the application.

Appian Query Entity Function: `a!queryEntity()` Function

NEW QUESTION # 27

What are three of Appian's core capabilities?

- A. Accommodating applications that need to run completely offline
- **B. Designing effective user interfaces by combining available UI components**
- C. Building highly-interactive reporting or data exploration applications
- **D. Connecting to database management systems (e.g., Oracle, MySQL, Microsoft SQL Server)**

- E. Automating business processes with complex workflow

Answer: B,D,E

Explanation:

Connecting to Database Management Systems (C): One of Appian's core capabilities is its ability to connect with various database management systems. This allows for seamless data integration, retrieval, and management, enabling applications to interact with databases like Oracle, MySQL, and Microsoft SQL Server, among others. Appian Documentation - Database Connections

Designing Effective User Interfaces by Combining Available UI Components (D): Appian provides a wide range of UI components that can be combined to design effective and user-friendly interfaces. This capability allows developers to create intuitive and interactive applications that meet user requirements. Appian Documentation - User Interface Design

Automating Business Processes with Complex Workflow (E): Appian excels in automating business processes, especially those that involve complex workflows. Its workflow automation capabilities allow for the orchestration of tasks, approvals, and other process activities, making it a powerful tool for process-driven applications. Appian Documentation - Workflow Automation

Note: Building highly-interactive reporting or data exploration applications (A) is possible in Appian, but it's not the platform's primary focus. Accommodating applications that need to run completely offline (B) is not one of Appian's core capabilities, as it is primarily designed for online, connected applications.

NEW QUESTION # 28

Review the following project phase definition:

"A standardized agreement between Development Team and the Product Owner on what criteria a user story must meet in order for the team to consider it complete." Which option does this definition apply to?

- A. Acceptance Criteria
- B. Definition of Ready (DoR)
- C. Definition of Done (DoD)
- D. Value Statement

Answer: C

Explanation:

The "Definition of Done" (DoD) refers to a shared understanding between the Development Team and the Product Owner on the criteria that a user story must meet to be considered complete. This definition helps ensure that all aspects of the user story are fully developed, tested, and meet the agreed-upon standards before being marked as done.

Definition of Done Overview:

DoD includes all conditions that must be satisfied for the work to be accepted by the product owner.

It typically covers code completion, testing, documentation, and any other activities required to deliver a finished product.

Why Not Other Options?:

A . Acceptance Criteria: Defines specific requirements that a user story must meet, but does not encapsulate the broader checklist for completion.

B . Value Statement: Describes the value delivered by a feature, not the criteria for completion.

C . Definition of Ready (DoR): Refers to when a user story is ready to be taken into a sprint, not when it is complete.

References:

Appian Community Success Guide: Definition of Done in Agile Projects

The Definition of Done ensures that the product increment is fully functional, tested, and ready for deployment, maintaining a high standard of quality.

NEW QUESTION # 29

.....

Through continuous development and growth of the IT industry in the past few years, ACA-100 exam has become a milestone in the Appian exam, it can help you to become a IT professional. There are hundreds of online resources to provide the Appian ACA-100 questions. Why do most people to choose Braindumpsqa? Because Braindumpsqa has a huge IT elite team, In order to ensure you accessibility through the Appian ACA-100 Certification Exam, they focus on the study of Appian ACA-100 exam. Braindumpsqa ensure that the first time you try to obtain certification of Appian ACA-100 exam. Braindumpsqa will stand with you, with you through thick and thin.
