100% Pass Quiz Fantastic SPLK-2003 - Exam Splunk Phantom Certified Admin Fee

We abandon all obsolete questions in this latest SPLK-2003 exam torrent and compile only what matters toward actual real exam. Without voluminous content to remember, our SPLK-2003 quiz torrent contains what you need to know and what the exam will test. So the content of our SPLK-2003 quiz torrent is imbued with useful exam questions easily appear in the real condition. We are still moderately developing our latest SPLK-2003 Exam Torrent all the time to help you cope with difficulties. All exam candidates make overt progress after using our SPLK-2003 quiz torrent. By devoting ourselves to providing high-quality practice materials to our customers all these years, we can guarantee all content are the essential part to practice and remember. Stop dithering and make up your mind at once, SPLK-2003 test prep will not let you down.

Splunk SPLK-2003 (Splunk Phantom Certified Admin) Certification Exam is designed to test the knowledge and skills required to effectively administer the Splunk Phantom platform. Splunk Phantom Certified Admin certification is ideal for professionals who want to demonstrate their expertise in automating and orchestrating security operations and incident response processes. SPLK-2003 exam covers a wide range of topics, including workflow design, playbook development, integration with third-party tools, and data management.

Splunk SPLK-2003 certification exam is designed to test the skills and knowledge of individuals who wish to become certified as a Splunk Phantom Certified Admin. Splunk Phantom Certified Admin certification is intended for professionals who are responsible for deploying, configuring, and managing the Splunk Phantom platform, which is used for security automation and orchestration. SPLK-2003 Exam covers a range of topics, including architecture and deployment, user and role management, automation and orchestration, and integration with third-party tools.

Splunk Phantom Certified Admin Sample Questions (Q35-Q40):

NEW QUESTION # 35
What users are included in a new installation of SOAR?

- A. Only the admin user is included by default.
- B. The admin and automation users are included by default.
- C. The admin, power, and user users are included by default.
- D. No users are included by default.

Answer: B

Explanation:
The admin and automation users are included by default. Comprehensive Explanation and References of answer According to the Splunk SOAR (On-premises) default credentials, script options, and sample configuration files documentation1, the default credentials on a new installation of Splunk SOAR (On-premises) are:
Web Interface Username: soar_local_admin password: password
On Splunk SOAR (On-premises) deployments which have been upgraded from earlier releases the user account admin becomes a normal user account with the Administrator role.
The automation user is a special user account that is used by Splunk SOAR (On-premises) to run actions and playbooks. It has the Automation role, which grants it full access to all objects and data in Splunk SOAR (On-premises).
The other options are incorrect because they either omit the automation user or include users that are not created by default. For example, option B includes the power and user users, which are not part of the default installation. Option C only includes the admin user, which ignores the automation user. Option D claims that no users are included by default, which is false.
In a new installation of Splunk SOAR, two default user accounts are typically created: admin and automation. The admin account is intended for system administration tasks, providing full access to all features and settings within the SOAR platform. The automation user is a special account used for automated processes and scripts that interact with the SOAR platform, often without requiring direct human intervention. This user has specific permissions that can be tailored for automated tasks. Options B, C, and D do not accurately represent the default user accounts included in a new SOAR installation, making option A the correct answer.

NEW QUESTION # 36
To limit the impact of custom code on the VPE, where should the custom code be placed?

- A. A separate code repository.
- B. A separate container.
- C. A custom container or a separate KV store.
- D. A custom function block.

Answer: D

Explanation:
To limit the impact of custom code on the Visual Playbook Editor (VPE) in Splunk SOAR, custom code should be placed within a custom function block. Custom function blocks are designed to encapsulate code within a playbook, allowing users to input their own Python code and execute it as part of the playbook run. By confining custom code to these blocks, it maintains the VPE's performance and stability by isolating the custom code from the core functions of the playbook.
A custom function block is a way of adding custom Python code to your playbook, which can expand the functionality and processing of your playbook logic. Custom functions can also interact with the REST API in a customizable way. You can share custom functions across your team and across multiple playbooks to increase collaboration and efficiency. To create custom functions, you must have Edit Code permissions, which can be configured by an Administrator in Administration > User Management > Roles and Permissions.

NEW QUESTION # 37
After a successful POST to a Phantom REST endpoint to create a new object what result is returned?

- A. The full CEF name.
- B. The PostGres UUID.
- C. The new object name.
- D. The new object ID.

Answer: B

NEW QUESTION # 38

Which is the primary system requirement that should be increased with heavy usage of the file vault?

- A. Number of processors.
- B. Bandwidth of network.
- C. Amount of storage.
- D. Amount of memory.

Answer: C

Explanation:
Explanation
The primary system requirement that should be increased with heavy usage of the file vault is the amount of storage. The file vault is a secure repository for storing files on Phantom. The more files are stored, the more storage space is needed. The other options are not directly related to the file vault usage. See [File vault] for more information.

NEW QUESTION # 39

Which of the following is a step when configuring event forwarding from Splunk to Phantom?

- A. Create a saved search that generates the JSON for the new container on Phantom.
- B. Map CIM to CEF fields.
- C. Create a Splunk alert that uses the event_forward.py script to send events to Phantom.
- D. Map CEF to CIM fields.

Answer: C

Explanation:
Explanation
A step when configuring event forwarding from Splunk to Phantom is to create a Splunk alert that uses the event_forward.py script to send events to Phantom. This script will convert the Splunk events to CEF format and send them to Phantom as containers. The other options are not valid steps for event forwarding.
See Forwarding events from Splunk to Phantom for more details.

NEW QUESTION # 40

......

Compared with companies that offer a poor level of customer service, our SPLK-2003 exam questions have over 98 percent of chance to help you achieve success.
